## Bull Dog Circuit Master Panelboards

Narrow Column Type

For A.C. Only

## Standard Panel Sizes

Circuit Master column type panels consist of three standard sizes—a maximum 16 circuit size (4 to 16 circuits inclusive), a maximum 24 circuit size (18 to 24 circuits inclusive), and a maximum 32 circuit size (26 to 32 circuits inclusive).

When less than the maximum number of circuits is specified, the unused circuit space is covered with filler plates.

Wireway extension, auxiliary extension, and pull box are optional with this line, as conduits can be run direct to panel if desired.

## Determining Wireway Heights

1. Use height from floor to top of panelboard (A + B) as base.
2. Add height of standard wireway extension (66 inches) when ceiling or truss height does not exceed 12 feet.
3. When ceiling or truss height is 14 feet, add 24-inch auxiliary extension (D) to standard 66-inch extension.
4. When ceiling or truss height is 16 feet, add 48-inch auxiliary extension (D) to standard 66-inch extension.
5. When ceiling or truss height falls between 12 feet and 14 feet or 14 feet and 16 feet, the installer merely cuts from a 24-inch or 48-inch (D) auxiliary extension (sleeve end only) the surplus not required.

Table 1

CIRCUITS	A	B	C	D	E
16	2'	4' 6"	4' 9 1/2"	2'	12'
24	2' 8"	3' 10"	4' 1 1/2"	AND	14'
32	3' 4"	3' 2"	3' 5 1/2"	4'	16'

## Standard Extensions

Panelboards are usually combined with wireway extensions and pull boxes designed to extend up columns.

Such combinations permit free wiring space in the panel, obviate the use of conduits, and lend a streamlined appearance to the finished job.

Standard extensions are 66 inches in length.

One end of the extension is provided with a sleeve that fits snugly over a collar provided at the panelboard top. The opposite end of the extension is closed.

A large rectangular hole near the top of the extension matches with a similar hole cut in the back of the pull box to complete the wireway.

Fig. 1

## Panelboards Only

In the very few instances where extensions and pull boxes are not required, the panelboard includes 16 inches extra space for housing of the neutral strap.

The 16-inches is merely a dimension factor and not a price factor because the price of the panelboard, as listed under its number, includes a neutral located in the 16-inch space or in the pull box.

Fig. 3

## Auxiliary Extensions

Auxiliary extensions are short pieces designed to fit between the panelboard (A) and the standard 66-inch extensions where required.

They are available in 24-inch and 48-inch sizes (D).

Each is provided with a sleeve on one end and a collar on the other.

The 24-inch and 48-inch sizes will permit extensions to 14-feet or 16-feet ceiling or truss heights.

For intermediate heights between 12 feet and 14 feet, and 14 feet and 16 feet, the sleeve end only of the auxiliary extensions may be cut down by the customer to the required size.

Fig. 2

## Pull Boxes

Dimensions are standard (other sizes made to order). Boxes can be furnished with or without conduit knockouts.

Box steel, 14 gage, is used.

The front and ends are flanged and removable, and the ends are interchangeable and reversible for knockout convenience.

The finish is black lacquer.

Pull Box with Front Removed

## Narrow Column Type

## For A.C. Only

## Concluded

**Mains:** 3 Wire, 115-230 Volts, Solid Neutral.  
3 Phase 4 Wire, 120-208 Volts, Solid Neutral

**Branches:** 2 Wire, 15 Amperes, 115 Volts, Single Pole, Solid Neutral

Cabinets are code gage steel, surface type with hinged fronts. Dimensions: 8½ inches wide, by 6 inches deep (O.D.). Height in inches is indicated by numerals in box numbers shown in Table 1A.

The boxes (back section of cabinet) are shipped with main wire grips and branch circuit wiring retainers in place, so that wires can be pulled through ready for connection to panel assembly (interior) later.

Neutral is located in pull box, but where no pull box is ordered, neutral is mounted in panel (Fig. 1A, Table 1A). No deduction from panel price, or no addition to pull box price, is made for furnishing neutral in pull box instead of in panel.

## Wireway Extensions

No. NCX24 24-Inch Plain Extension (Fig. 2, Dimension D); Weight, 18 Pounds. each \$22.00

No. NCX48 48-Inch Plain Extension (Fig. 2, Dimension D); Weight, 26 Pounds. each 24.00

These plain extensions are used where ceiling height exceeds 12 feet. Add to prices of Table 2A.

No. NCX66 66-Inch Upper Extension with Opening for Pull Box; as Provided with and Included in Price of NCRB-LXB Assemblies Listed in Table 2A Above—For Ceiling Heights not Exceeding 12 Feet; Weight, 35 Pounds.....each \$29.00

## Pull Box

Dimensions: 15 inches high by 24 inches wide by 6½ inches deep.

Knockouts: Top—2 concentric knockouts for 2, 2½, and 3-inch conduit. Ends—1 concentric knockout for 2, 2½, and 3-inch conduit and 14 for ½, ¾, and 1-inch conduit. Front and Bottom—plain; no knockouts. Back—12x6-inch opening.

The pull box, including neutral bar, is supplied as provided with and included in price of NCRB-LXB assemblies listed in Table 2A above.

No. NCB1524 Pull Box—With 100 Ampere Neutral; Weight, 10 Pounds.....each \$19.00

No. NCB1524-1 Pull Box—With 200 Ampere Neutral; Weight, 10 Pounds.....each 19.00

Additions for Increased Mains. amp. 50-100

2 Ungrounded Poles. \$13.00

3 Ungrounded Poles. 13.00

When space only for future circuits is required, figure on basis of total number of circuits and deduct \$1.50 for each breaker pole omitted.

For panels having combination of 1 and 2 pole branches all fed from same bus and under one door, determine total number of poles in branches. Use price of a listed panel having equivalent number of 1 pole breakers and add \$1.50 for each 2 pole branch. All 2 pole branch breakers have separate trip.

Type NR1B panels may contain only a certain proportion of 2 pole circuits, as indicated below.

Total 1 Pole Circuits	Comb. 1 Pole Circuits	Total 1 Pole Circuits	Comb. 1 Pole Circuits	Total 1 Pole Circuits	Comb. 1 Pole Circuits	Total 1 Pole Circuits	Comb. 1 Pole Circuits	Total 1 Pole Circuits	Comb. 1 Pole Circuits

Additions for Increased Mains. amp. 50-100 50-200 100-200

2 Ungrounded Poles—Lugs Only. \$13.00 \$13.00 \$13.00

2 Pole Breaker. 32.00 125.00 108.00

Add to Box Height. inches 6 6 6

3 Ungrounded Poles—Lugs Only. \$13.00 \$13.00 \$13.00

2 Pole Breaker. 36.00 159.00 129.00

Add to Box Height. inches 6 6 6

When space only for future circuits is required, figure on basis of total number of circuits and deduct \$1.00 for each breaker pole omitted.

For panels having combination of 1 and 2 pole branches all fed from same bus and under one door, determine total number of poles in branches. Use price of a listed panel having the equivalent number of 1 pole breakers and add \$1.00 for each 2 pole branch. All 2 pole branch breakers have separate trip. Main breakers (2 and 3 pole) have common trip.

## FA Service Equipment

## Pulfuzsw Type

**BASES.** Made of Sections of Moulded Material Assembled Directly into the Box for Surface Mounting; and Assembled onto a Mounting Back for Flush Mounting to Allow for Adjustments.

**MAINS.** Pulfuzsw Units, 30, 60 and 100-Ampere 2-Pole with Bonded Solid Neutral for Single Phase 120/240-Volt 3-Wire Service. Three-Pole with Solid Neutral for 120/208 4-Wire 3-Phase Service.

**BOX.** Code Thickness Galvanized Steel.

**FRONT.** Code Thickness Furniture Steel, Rust-Proof, and Pearl Gray Finish. Ring catch on Door.

No. SEPF332NF

No. SEPF632NR

**FA Service Equipment**  
**MR Type—Main and Range Combination**  
**Sequence: Meter—Switch—Fuse**

No. SEMR4-S60, Surface

Designed to meet modern requirements for homes having electric ranges, water heaters or other heavy capacity appliances. Small and compact, its specifications were dictated by Electrical Contractors and Wholesalers in conformity to the recommendations and requirements of Underwriters' Laboratories, Inc., and Utilities throughout the country.

Made in two capacities: In the 60-ampere main capacity Series type, the main Pulfuzswitch unit controls the four lighting branch circuits, sub-feed lugs, and the range unit.

In the 60 and 100-ampere main capacity Parallel type, the main Pulfuzswitch unit controls the lighting branch circuits and sub-feed lugs only; the range circuit is connected in parallel ahead of the main switch.

\*Prices are based on 15-amp. breakers, 20 and 25-amp. breakers supplied at same prices except when increased capacity bus bars are required; 35 and 50-amp. breakers, \$1.50 extra per circuit plus extra list for increasing mains, if required.

## FA Safety Type NA1BS-4 Circuit Breaker Panelboards and Cabinets

One Pole Breaker—Connected A-B-C Sequence

Type NA1BS-4L

Double Row

Single Row

Type NA1BS-4AB

**PANELBOARD.** Made of Sections of Moulded Material.**BRANCHES.**

\*15 Amp., 125 V. S.P., Dublbrak Type Thermal Circuit Breakers for 120 V., 2-Wire, Solid Neutral Circuits. Connected A-B-C sequence.

**MAINS.**

3-Phase, 4-Wire, 120-208 V., Solid Neutral. "Sequence Bussing".

**BOX.**

Code Thickness Galvanized Steel, Gutters, as noted.

**FRONT.**

Code Thickness Furniture Steel. Rust-proof and Pearl Grey Finish. Flush Mounting unless Surface is Ordered.

It is standard practice to assemble 3-phase, 4-wire lighting and appliance branch circuit panelboards so that all branch circuits on each phase are grouped together.

Ordinarily this scheme of connection meets all requirements, and since it is possible to make panelboards of this type somewhat narrower, a saving of space is effected. When panelboards are mounted on columns in industrial plants, the matter of additional width might be objectionable.

However, specifications occasionally specify the adjacent circuit branches to be connected in the sequence of phase A, B, and C, repeating this connection all the way from the top to the bottom of the panelboard.

The cost of the A, B, C, sequence arrangement is slightly higher than that of the group-phase arrangement, because a wider box is required and branch circuits require copper connecting straps between the main bus bar and circuit branches.

\*Prices are based on 15-amp. breakers, 20 and 25-amp. breakers supplied at same prices except when increased capacity bus bars are required; 35 and 50-amp. breakers, \$1.50 extra per circuit, plus extra list for increased main, if required.

## FA Industrial Column Type NA1BC Circuit Breaker Panelboards and Cabinets

## One Pole Breaker

**PANELBOARD.** Made of Sections of Moulded Material.

**BRANCHES.** \*15 Amp., 125 V. S.P. Dualbrak Type Thermal Circuit Breakers for 115 or 120 V., 2-Wire, Solid Neutral Circuits.

**MAINS.** Lugs Only with Solid Neutral. For 3-Wire, 115-230 V., or 4-Wire, 3 Ph., Solid Neutral Type for Surface Mounting Only.

**BOX.** Code Thickness Galvanized Steel with Side and Rear Gutters. Pearl Gray Finish. Flanged Door Feeder Systems.

**JUNCTION BOX.** Code Thickness Galvanized Steel. Neutral Plate Included. Size and Design as Shown Above.

Designed to be mounted between the flanges of a 10-inch H column; it may also be used to advantage in any other location where the available space will not accommodate a standard width panelboard.

**Design A** has the neutral plate located in an extension of the panelboard box. This extension has a removable screw cover which is separate from the panelboard front. A junction box for mounting on the ceiling directly above the panelboard location is furnished at extra cost.

**Design B** is the same as Design A, except that the neutral plate is mounted in the junction box on the ceiling. In both

designs, A and B, the contractor must furnish one or more riser conduits between the junction box and the panelboard.

**Design C** is similar to Design B, except that the connection between the junction box and the panelboard box is made by means of a wire duct instead of riser conduits.

Wire and cable duct is furnished extra as follows:

		36 to 76 Inches				
Length.....	In.	36	46	56	66	76
Each.....		\$23.00	25.00	26.00	29.00	30.00

†Junction Box, 18 inches wide, 12 inches high, 5 inches deep, add \$20. to prices.

‡When Design A is specified add to box height as follows: 4 to 24 branches, 6 inches; 26 to 30 branches, 10 inches. No additional charge.

## Trumbull Unit Lighting Panelboards

125 Volts, 125-250 Volts A.C. or D.C.,  
and 250 Volts A.C.

A unit lighting panelboard of the sectional type, which is an essential part of the interior distribution system, provides for multiple grouping of many small circuits or branches; facilitates their control and allows for convenient renewal of protective devices.

This type of panelboard is available in two types: Standard, with 20-inch width box, and the narrow type panel with a 12½-inch width box. The latter is particularly suitable for mounting in areas limited or restricted.

**APPLICATION.**—A unit lighting panelboard is designed for low voltage lighting distribution, 125 volts d.c., 125-250 volts a.c. or d.c. and 250 volts a.c. where the capacity in all branch circuits does not exceed 30 amperes.

**CONSTRUCTION.**—This panel is constructed of standardized parts, thereby providing additional features of flexibility and interchangeability.

Dead front type, consisting of an assembly of moulded bakelite sections, each containing a maximum of four tumbler switches, with fuses of the plug or cartridge type. Tumbler switches are available in both single and double pole, having a rating of 30 amperes, 250 volts. Panel is furnished complete with box and trim of code gage sheet steel.

## Trumbull Circuit Breaker Lighting Panelboards

125 Volts D.C., 125-250 Volts  
or 250 Volts A.C.

A circuit breaker lighting panelboard is particularly adaptable when automatic overload protection and flexibility are important factors of the installation.

This type of panelboard incorporates the Type AT Circuit Breaker with improved electrical and mechanical features.

**APPLICATION.**—This panelboard is designed for low voltage, branch circuit lighting and power distribution, 125 volts d.c., 125-250 volts or 250 volts a.c. where the capacity of any branch circuit does not exceed 50 amperes, although one subfeed up to 225 amperes can be furnished.

**CONSTRUCTION.**—Breakers are assembled on a heavy black enamel steel back plate, to accommodate the mounting of either 1, 2 or 3-pole breakers of 15, 20, 25, 35 or 50-ampere rating. This provides a feature of interchangeability which may be desirable at some later date to accommodate changes within the electrical wiring system.

Breakers are calibrated and sealed at the factory to prevent unauthorized tampering or changes.

Panelboard boxes are 4½ inches deep, with the exception of where main breakers are of 100 or 225 amperes, frame size, which require a box 5¾ inches deep.

This panelboard is also available in the narrow type construction for use in areas where space may be a limiting factor.

## Trumbull Multi-Breaker Lighting Panelboards

115-230 Volts A.C.

This type of panelboard is particularly suitable for restricted space, usually encountered in modern homes, stores and office buildings.

**APPLICATION.**—Designed for 120-240 volts a.c.

Branch circuit breakers are available in 15, 20, 25, 35 and 50-ampere, single and double-pole.

**CONSTRUCTION.**—Panel is assembled with molded unit blocks, each of which houses a number of unit pole breakers. The entire unit is rivet sealed with metal cover at the factory to prevent unauthorized changes.

Available with two types of breakers: one, utilizing the Type MB breaker, which can house as many as four single pole units in one block, and the other the Type M breaker, which houses two single pole units in one block.

The latter is particularly advantageous where added flexibility may be desired.

## Trumbull Column Type Lighting Panelboards

Single-Phase, 115-230 Volts A.C., 3-Phase,  
4-Wire 115-208 Volts A.C.

A new type of panelboard, which has been particularly designed for use in factory buildings where it may be desirable to assemble panelboards in the web of H columns.

**APPLICATION.**—Available for single-phase, 120-240 volts a.c., 3-phase, 4-wire 120-208 volts a.c. with branch circuits ranging from 15 to 50 amperes inclusive, single and double pole.

**CONSTRUCTION.**—This type of panelboard incorporates the use of Type M breaker, consisting of 2 unit pole breakers, assembled in a moulded unit block and rivet sealed to prevent any tampering. This panel is furnished in a 7¼-inch wide box designed for an 8-inch beam.

Boxes furnished with blank ends unless knockout information accompanies order. Fronts are furnished for flush or surface mounting; specify when ordering.

**Lighting Panelboards (except Column Type)**  
furnished with Dual Purpose Front; suitable for  
either flush or surface mounting. Standard drill-  
ing furnished on all Lighting Panelboard  
Boxes unless otherwise specified on order.

**Write for complete information regarding additions for special features.**

## Type NM1B Trumbull Compact Multi-Breaker Panelboards

3-Wire Mains, 120-240 Volts, A.C.; 2-Wire Branches, 120 Volts, A.C.

15-Ampere, Single-Pole Type MB Multi-Breaker in One Leg; Solid Neutral Bar in Other Leg

## Schedule L

For Panels having all double-pole breakers or combinations of single and double poles, convert to total number of single poles and obtain price of panel, then add \$1.00 for each double-pole substituted for two single poles.

These panels may contain from 2 to 18 double circuits. No panel may contain more than four poles of 35 or 50-ampere capacity which might be in the form of two double-pole 35 or 50-ampere circuits, four 35 or 50-ampere single pole circuits, one 35 or 50-ampere double-pole circuit or two 35 or 50-ampere single pole circuits. For panelboards involving more 35 or 50-ampere poles refer to Type NMM.

Standard drilling furnished on all lighting panelboard boxes unless otherwise specified on order. Blank box ends will be furnished on all special panelboard boxes unless drilling accompanies order.

Solderless lugs furnished in standard mains.

Blank box ends will be furnished on all special panelboard boxes unless drilling accompanies order. Solderless lugs standard in the mains.

## Trumbull Lighting and Power Distribution Panels

## Convertible Circuit Breakers—Converti-Fuse—Swing-Wa

600 Volts and Less, A.C. or D.C.

Single-Phase or D.C.—2 or 3-Wire

Service 3-Phase—3-Phase 3-Wire or 3-Phase 4-Wire

## Schedule L

**Converti-Fuse Panelboard.** Designed for 600-volt service. Branch circuits are available in 1, 2, or 3-pole, from 30 to 400 amperes, inclusive. Consists of an assembly of unit bakelite sections mounted on a steel back plate, or channel iron construction depending on size of panel. Has dead front design, interchangeable individual base sections and removable caps, and solderless lugs in mains.

**Swing-Wa Panelboard.** Designed for 600 volts a.c. service. Branch circuits can be furnished in 2 or 3-pole, 30 to 400 amperes, inclusive. Individual units are enclosed in protective steel compartments and allow for the maximum of interchangeability, flexibility, and rearrangement of circuits. Furnished with an operating handle, full floating contacts, thermostatic contact reinforcements, and solderless lugs in mains.

Converti-Fuse

**Blank Box Ends** (removable) are furnished as standard unless knockout information accompanies order.

**Panelboards** furnished with dual purpose front, suitable

for either flush or surface mounting.

**Solderless Lugs** in main busses are standard. Furnished in branch circuits when requested at no additional charge.

# Trumbull Circuit Breaker Distribution Power Panelboards

Schedule L

Used for automatic overload current protection for heavy duty light and power distribution.  
**Application.**—Available for 125-250 volts a.c. and d.c. systems and 600 volts a.c. Branch circuits are available from 15 to 600 amperes inclusive, 2 and 3-pole.

**Construction.**—Sectionalized type with breakers mounted on steel back plates, making it possible to provide space in the cabinet for future additional circuits, or to interchange circuits. The larger size circuit breakers above 50-ampere frame equipped with removable trips units, thus allowing in certain instances desirable changes in capacity without removing the unit itself. Because of standard breaker dimensions, it is also possible to interchange units of different poles or capacities. Solderless lugs standard in mains.

**Note.**—Panelboards furnished with dual purpose front, suitable for either flush or surface mounting. Boxes without knockouts unless arrangement specified on order. Base price includes main lugs (either single or 3-phase), top and bottom gutter, with respective sections of bus, box and front to circuit edge. Remaining equipment for complete panelboard included in circuit prices.

**Main Breakers.**—Figure same as branch circuit from circuit prices after adding base price considering main breaker as largest branch circuit. X=1 $\frac{3}{8}$  inches.

Dimensions		
Box Width.....	inches	28
Box Depth.....	inches	9 $\frac{1}{2}$
Gutter Width.....	inches	5

## Trumbull Special Features

The following special features are available on all panelboards unless indicated otherwise:

*Increased Gage Over Standard, Maximum 10 Gage: Box Only or Front Only..... each	\$15.00	*Special Front or Door Arrangements: Non-Standard Door-In-Door with 1 Door Over Interior and Additional Door Exposing Wiring Gutter..... set	\$20.00
*Increased Gutters Over Standard: For Each 12-In. Increase (or Fraction Thereof) in Length (Ends)..... each	20.00	Double or Split Doors, One Above the Other. each	20.00
†For Each 5-In. Increase (Or Fraction Thereof) in Width (Sides)..... each	20.00	One Front with Two Doors, in Place of 2 individual Fronts, to Cover 2 Boxes Side by Side..each	20.00
†For Increased Depth Up to 8-In. Max. on Lighting Panels, or 14-In. Max. on Distribution Panels..... each	20.00	*Finishes, Hot Dipped Galvanized: Box Only or Front Only, Up to 20x48 In...each	50.00
*Weatherproof Cabinets: †Single Door, Width Less Than 20 In..... each	45.00	Box and Front, Up to 20x48 In..... per set	75.00
†Single Door, Width Over 20 In..... each	60.00	Box Only or Front Only, Up to 30x48 In...each	100.00
†Door Back of Door, Width less than 20 In. each	60.00	Box and Front, Up to 30x48 In..... per set	130.00
†Door Back of Door, Over 20 In..... each	90.00	*Finishes, Cadmium Plated: Box Only or Front Only, Up to 20x48 In...each	20.00
*Dust-Resisting Cabinet, Felt or Rubber Gaskets for Door and Front Only: Boxes, Not over 20 In. Wide..... each	30.00	Box and Front, Up to 20x48 In..... per set	35.00
Boxes, Over 20 In. Wide..... each	40.00	Box Only or Front Only, Up to 30x48 In...each	45.00
*Mounting Only any Standard Wall-Mounted Wiring Device (Pilot Lamps, Tumbler Switches) in Front of Box (Device Not Included): First Device..... each	10.00	Box and Front, Up to 30x48 In..... per set	70.00
Additional Devices..... each	5.00	*Special Paint (Special Paint is any Finish Except Aluminum, Black, Brown, Crystallac, Gray, Green, or Prime Coat): Box, Front, or Both..... each	30.00
Mounting Only Instruments (Time Clocks, etc.) (Device not included): Drilling Only, No Increase in Box Size.....	20.00	*Galvanized Sheet Steel Front..... each	20.00
		*Glass Door Panel in Steel or Wood Frame. per door	45.00
		Directory, Special Frame..... each	3.00
		Directory, Glass..... No Extra Charge	
		Spring Door Hinges, Bommer, Brass or Iron..... per pair	4.00

\*Deduct 25 per cent when individual order calls for duplicate cabinets with same special features, or when a quantity of ten or more assorted panelboards is involved.

†Not Applicable to column type.

Continued

## Trumbull Special Features

Concluded

### Special Locking Arrangements:

Vault Handle & 3-Point Catch, when Not Std. set.....	\$15.00
Extra Lock on Inner Door of Door-In-Door Panel.....each	2.50
Special Locks (Corbin No. 2510-2520, Yale No. 511-511S).....each	14.00
Special Locks (Corbin No. 2720, Yale No. R272, R274-5101S).....each	7.00
Master Keying (Applies Only to Above Locks) Only with other Locks of Same Type Number.....add per lock	1.00

Panelboard interiors and fronts to fit existing boxes. Panelboards furnished without boxes to take care of old installations. No credit will be allowed from price of complete panelboard for omitting box. Price of panel interior and special front will be price of complete standard panelboard having desired interior, providing existing box is same depth as Trumbull standard for the one being ordered. If existing box is shallower or deeper than Trumbull standard, extra charges are made as follows:

Panel Interior and Front to Fit Existing Box Which is Shallower.....add to complete panel	\$35.00
Panel Interior and Front to Fit Existing Box Which is Deeper.....add to complete panel	10.00

### Split Bus and Meter Loop—Distribution Panelboards

225 and Below	\$25.00	\$30.00
400	30.00	35.00
600	35.00	40.00
800	50.00	55.00
1200	60.00	65.00

\*Limited to lighting panelboards.

†Not available on NM1B.

### Copper Density, 800 Amperes per Square Inch:

Lighting Panelboards, Main Busses Only.....each	\$10.00
Distribution Panelboards, Main Busses Only.....each	25.00
Cadmium or Silver Plated Connecting Straps and Bus Bars.....per pole	.60

Main Lugs, Location Top and Bottom . . . no extra charge  
Neutral Bar, Lighting Panelboards: Omission . . . no credit  
Non-Automatic Circuit Breakers:

Mains Only . . . . .	Use automatic circuit breaker prices
Main or Sub-Feed Switch, Unfused . . . . .	use fusible switch prices
For tumbler switch and fuse lighting panelboards requiring some fusible only branches, figure panelboards on basis of total number of branches, and for each fuse only branch. Deduct . . . . .	each \$1.00
For Tumbler switch and fuse lighting panelboards requiring 3-way tumbler switches in panel. Add . . . . .	pair \$25.00
For 2-phase, 5-wire, lugs only in mains, lighting panelboards, use price of single-phase, 3-wire panelboard with equivalent number of branches and add \$15.	
Handle Lock-Off . . . . .	each \$1.00

Space for Future Circuits: Where space only is desired figure total number of branches, including spaces, and deduct as follows:

Type NTP or NTC, for 4 Single Poles (1 Unit).....each	\$6.00
Type TP or TC, for 2 Two-Poles (1 Unit).....each	6.00
Type NM1B-NMM and NMMXX, for Each Space.	1.00
Type NQ, for Each Space.....	2.00
Type NAB, for Each Space.....	3.00
Type NP or NRP . . . . .	No Deduction

Multi-Breaker Units Only: Replacement and exchange; write for information and prices.

For 2/2-wire, 250-volt tumbler switch panelboards: use the same price as corresponding 125-volt panelboard.

For lighting panelboards having 3/3-wire, 125-250-volt solid neutral branches use list price of 2/2-wire, 250-volt panelboard and add for neutral bar . . . . . \$6.00

For 3/2-wire, tumbler switch panelboards for use on 3/2-wire, 3-phase to single-phase, use price corresponding to TC3 panel for maximum 250-volt or TP3 for 125-volt service.

For lighting panelboards for use on 2-phase, 5-wire, 125-250-volt solid neutral service, use price of 3-wire single-phase, 125-250-volt solid neutral service panel of equivalent number of branches, and add . . . . . \$15.00

For lighting panelboards of the NTP and NTC types, having combinations of single and double-pole branches, convert to total number of single poles and add \$1.50 for each double-pole substituted for each two single poles.

For circuit breaker panels having combination tumbler switched and some fusible only branches requiring only one door opening, prices should be determined by figuring the panel as occupying the same space as an equivalent panel with tumbler switches in all branches less a deduction of \$1.50 each for each single-pole or \$2.50 for each double-pole tumbler switch omitted.

Where number of circuits requires a box larger than standard, figure as two or more separate and distinct panels plus appropriate additions for special features. Panels can be furnished in one box or separate boxes. Add for sub-feed lugs for inter-connecting panels. Tie cables are not included. Where tie bus bars must be furnished, refer to your nearest supply house.

## G-E Lamps

## Bulb and Base Designations

## How to Order Lamps

Lamps should be ordered by the lamp ordering abbreviations as listed. Each abbreviation is complete without any other specifications except that the correct voltage must be supplied. Abbreviations which are complete without voltage include the series lamps listed in lumens and amperes, fluorescent lamps, and

## BASE DESIGNATIONS

the lamp numbers for S (Sunlight) lamps, H (Mercury) lamps, glow lamps, miniature (auto, flashlight, etc.) lamps, photoflash, photoflood, and photographic enlarger lamps.

Orders for lamps not specifically listed will require the complete specifications, as follows:

Specification	Multiple Lamps	Series Lamps
Size.....	150 Watts	2500 Lumens
Volts or Amps.	120 Volts	15 Amperes
Bulb.....	A-19, PS-30, G-25, etc.	PS-25 PS-40, etc.
Base.....	Med. Screw, Mogul Screw, Candelabra Screw, etc.	
Finish.....	Clear, Inside, Frosted, White Bowl, Daylight, etc.	
Service.....	Projection, Train, etc.	Street Lighting

## Special Lamps

Any lamp requiring a change in construction from the standard, in voltage, bulb shape or finish, basing or special etching will take a special price, which may be obtained upon application. All orders for special lamps except special etching may be filled either short or in excess, within the limits of 10 per cent, except that on orders for ten lamps or less there will not be any shortage or excess. Orders for lamps with special etching may be filled either short or in excess by 5 per cent; on orders for less than forty lamps the shortage or excess may equal but not exceed two lamps.

## Discount Schedule for Purchasers

A standard package of large lamps is defined as a package, as packed by manufacturer, of that standard package quantity designated for each lamp in the manufacturer's price schedule, and the lamps in such a standard package may not be of different specifications.

## To Purchasers without Contract

Minimum list value for immediate delivery to one point.	
Less than \$5.00.....	No discount
\$5.00.....	discount 20%
\$15.00 or a Standard Package*.....	discount 25%

## To Purchasers under Contract

Basis of Form E or CE Contract	DISCOUNT, PER CENT	Basis of Form E or CE Contract	DISCOUNT, PER CENT
\$15.00 or less		\$15.00 or less	
More		More	
\$300.00	26	\$20,000.00	35
600.00	28	35,000.00	36

7500.00	33	150,000.00	39
15000.00	34	200,000.00	40

\*On a purchase of \$15 or more list value or on a purchase of less than \$15 list value which includes standard package. Discount is for immediate delivery to one point.

†On purchases of broken packages amounting to less than \$15 list value. Discount is for immediate delivery to one point.

## G-E Fluorescent Lamps

Fluorescent lamps are for use only with specially designed auxiliary equipment to produce proper electrical values. Recommended for use only with equipment providing good power factor. This type of equipment assures maximum use from the wiring system. Certain counter balanced equipment provides good power factor with the added advantage of providing more constant light.

## G-E Slimline Fluorescent Lamps

G-E slimline fluorescent lamps are recommended for their decorative value as well as for lighting.

For store lighting, industrial lighting, showcases, and decoration as architectural elements.

Available in diameters of  $\frac{3}{4}$  or 1 inch; lamp lengths are 42, 64, 72, and 96 inches. Furnished for multiple operation.

When ordering, specify lamp ordering abbreviation.

## Single Pin Base

\*Rated Average Life—2500 Hours

Approx. Lamp Watts	Bulb Length Inches	Size	Color	Lamp Ordering Abbrev.	Std. Pkg. Qty.	Each
16-25	42	T-6	4500 White	F42T6/45W	24	\$1.55

29-51	96	T-8	4500 White	F96T8/45W	12	2.70

\*Life under specified test conditions.

## G-E Circline Fluorescent Lamps

Used in commercial and industrial applications as well as in residential floor and table lamps. Color, 3500 white.

Has 4-pin base.

Rated average life under specified test conditions, 2500 hours.

Standard package, 12.

## 32 Watts—12-Inch Lamps

T-10 bulb. Lamp ordering abbreviation, FC12T10/W. Each..... \$1.75

22 Watts—8 $\frac{1}{4}$ -Inch Lamps

T-9 bulb. Lamp ordering abbreviation FC8T9/W. Each..... \$1.70

A 16-inch diameter lamp is contemplated.

## G-E Three-Lite Lamps

## 3-Contact

115, 120 and 125 Volts

PS-25, G-30

Has two separate filaments in a single bulb.

Burn base down.

Each filament of different wattage may be lighted separately or in combination with the other to produce three levels of illumination.

## Mogul Screw Base

## G-E Clear Neon Glow Lamps

105-125 Volts

NE-40

NE-34

NE-30

NE-45

**Screw Base Lamps.** Required series resistor mounted within base. See values marked IN in column, Series Resistance. Lamps may be applied to higher circuit voltages by use of suitable external resistors—information on request.

**Bayonet Base Lamps.** External means must be provided to limit current to normal amount. External resistors, to be supplied by users, should be of the values marked EX in column, Series Resistance, for rated volts.

Average useful life approximately 3000 hours except NE-2 which is in excess of 25,000 hours when operated with 200,000 ohms series resistance on 105-125 volts.

Packed 10 in unit package, except No. NE-2 which is packed 100 in unit package.

Nos. NE-34 and NE-40 are supplied with red sprayed finish at additional charge of 5 cents each.

\*Applies to new lamp.

†210-250 volts.

‡The 1½-inch dimension is for glass parts only; the lamp has wire terminals which extend 1½ inch.

||Designed for 67-87 volts, d.c. (D.C. operating voltage at 1.5 milliamperes, 53-65 volts).

¶D.C. starting voltage is for lamps connected so that center electrode is negative.

## G-E Projector and Reflector Lamps

115, 120 and 125 Volts

PAR-38,  
Projector SpotPAR-38,  
Projector FloodR-40,  
Reflector

The projector flood and spot lamps may be used indoors or outdoors, wherever reflectors must be free from the effects of weather, vapor, dust and deterioration. Made of hard glass.

The reflector flood and spot lamps provide a concentrated beam for feature store and window displays, or a spread beam for floodlighting interiors and operations. Not for outdoor use.

## G-E Infrared Industrial Lamps

115-125 Volts (Design Volts 115)

A-23 G-30 R-40 PS-30 T-40 T-40

For service other than illumination. Speeds up drying and surface heating processes, by radiation. Used in drying photographic prints, industrial and automotive finishes, food products, localized heating, surface moisture, motor and transformer windings, blueprints, pottery, etc.

## Medium Base

For average installation of tunnel or gang set-up methods. Used in practically any commercial drying reflector.

Watts	Each	Bulb and Finish	Lamp Ordering Abbrev. (Ex. Volts)	Std. Pkg.

## G-E Photoflash Lamps

SM 5 6 11 22B 22 31 50

### No. SM Speed Midget Lamps

Has swift, low-intensity flash, for all-around near-distance pictures, in proper reflectors. Stops action on open flash about as effectively as a 1/200th second shutter setting.

Total light, 5,500 lumen seconds. For battery flashing only.

B-11 clear bulb, single contact bayonet base.

No. SM, Packed 8 in a carton, 120 in a case. ....each \$.14

### No. 5 Synchro-Press Lamps

For all-around flash pictures in proper reflectors. Split-second flash for synchronized use with between-the-lens shutters. For battery flashing only. Total light, 16,000 lumen seconds. B-11 clear bulb, single contact bayonet base.

No. 5, Packed 8 in a carton, 120 in a case. ....each \$.14

### No. 5B Synchro-Press Lamps

Same construction as No. 5, with blue filter coating for correct reproduction with daylight type color film. For daylight film without filter or to supplement daylight in outdoor color shots. For battery flashing only. Total light, 7,000 lumen seconds. B-11 blue bulb, single contact bayonet base.

No. 5B, Packed 8 in a carton, 120 in a case. ....each \$.18

### No. 6 Focal Plane Lamps

For use with most focal plane shutters. Same size, and uses same reflectors as No. 5. Flash on batteries only. Total light output, 15,000 lumen seconds. Bulb, B-11, clear.

No. 6, Packed 8 in a carton, 120 in a case. ....each \$.16

### No. 11 Synchro-Press Lamps

A small, general purpose lamp for open-flash shots, and for accurate synchronizers in press and amateur use, with between-the-lens shutters. For battery flashing only. Total light, 28,000 lumen seconds. A-15 clear bulb, medium screw base.

No. 11, Packed 8 in a carton, 120 in a case. ....each \$.14

### No. 22 Synchro-Press Lamps

For use with front-shutter cameras. Filled with shredded foil, which increases total light output, giving a broad peak to compensate for errors in synchronization. Operates on 3 to 125 volts. Total light 60,000 lumen seconds. A-19 clear bulb, medium screw base.

No. 22, Packed 6 in a carton, 120 in a case. ....each \$.16

### No. 22B Synchro-Press Lamps

Old No. 21B. For press use and between-the-lens shutter synchronizers. Has blue filter coating for correct rendition with outdoor type of film.

Voltages, from 3 to 125. Total light output, 26,000 lumen seconds. Bulb, A-19, clear.

No. 22B, Packed 6 in a carton, 120 in a case. ....each \$.22

### No. 31 Focal Plane Lamps

For high shutter speed synchronization with focal plane shutters for 4x5-inch negative size and less. Peak of illumination provides ample light on the subject during the full time the shutter is open. For battery flashing only.

Total light, 75,000 lumen seconds. A-21 clear bulb, medium screw base.

No. 31, Packed 6 in a carton, 60 in a case. ....each \$.25

### No. 50 Photoflash Lamps

For commercial photography, particularly color work. Contains shredded foil. Voltages, from 3 to 125. Total light output, 93,000 lumen seconds. Bulb, A-21, clear.

No. 50, Packed 6 in a carton, 60 in a case. ....each \$.23

### No. 50B Photoflash Lamps

Similar to No. 50 except that the blue filter coating is carefully matched to the color characteristics of daylight color emulsions. Has 30 millisecond peak, synchronizes at 1/25 second. Operates on 3 to 125 volts d.c. or a.c. Has medium screw base. Bulb, A-21.

No. 50B, Packed 6 in a carton, 60 in a case. ....each \$.29

## G-E Photoflood Lamps

115-120 Volts, A.C. or D.C.

No. 1

No. 2

No. 4

No. RFL2

### Nos. 1 and B1 Lamps

Same size as a standard 60-watt lamp, drawing 250 watts at 115 volts (2.2 amperes), yet photographically equal to as much as 750 watts in standard lighting lamps.

As many as six of these lamps may be safely used on one regular house lighting circuit.

Rated life, 3 hours at 115 volts.

A-21 bulb, inside frosted, medium screw base.

Packed 6 in a carton, 60 in a case.

No. 1. ....each \$.16

No. B1, Blue. ....each .30

### Nos. 2 and B2 Lamps

Same size as a standard 150-watt lighting lamp, drawing 500 watts at 115 volts (4.4 amperes), yet photographically equal to as much as 1500 watts in standard lighting lamps.

Three of these lamps may be safely used on one regular house lighting circuit. Rated life, 6 hours at 115 volts.

PS-25 bulb, inside frosted, medium screw base.

Packed 6 in a carton, 60 in a case.

No. 2. ....each \$.30

No. B2, Blue. ....each .60

### Nos. 4 and B4 Lamps

Same size and shape as the regular 300-watt general service lamp with mogul screw base. Draws 1000 watts at 115 volts (8.7 amperes).

Twice as effective photographically as the regular 1000-watt lamp. Rated life, 10 hours at 115 volts.

PS-35 bulb, inside frosted, mogul screw base.

Packed 1 in a carton, 24 in a case.

No. 4. ....each \$1.20

No. B4, Blue. ....each 1.75

### No. RFL2 Lamps

Gives a smooth 60° controlled beam. Highly reflective inside surface of mirror aluminum in reflector-shaped bulb 5 inches in diameter, 6½ inches overall.

R-40 bulb, inside frosted, medium screw base.

Packed 1 in a carton, 24 in a case.

No. RFL2. ....each \$.95

### No. RSP2 Reflector Photospots

Identical in size, shape, wattage, life and color temperature with No. RFL2. Ideal for highlighting, backlighting and edgelighting. Its light has been squeezed into a beam of approximately 20°—resulting in a punch of light more than seven times more powerful than that of No. RFL2.

R-40 bulb, inside frosted, medium screw base.

Packed 1 in a carton, 24 in a case.

No. RSP2. ....each \$1.10

## G-E Sunlight Lamps

S-1

S-4

RS

**\*No. S-4—Admedium Screw Base**

Emits characteristic blue-green light of mercury spectrum. Because of lower current requirements, 100 watts, it permits the use of smaller, lighter fixtures.

Has A-21, bulb, clear. Standard package, 6.

No. S-4.....each \$11.00

**\*No. S-1—Mogul Screw Base**

Has approximately the same ultraviolet potency as the No. S-4, but delivers a larger proportion of visible light and more infra-red energy or heat. Total input, 400 watts.

Has PS-22 inside frosted bulb. Standard package, 6.

No. S-1.....each \$4.75

**No. RS—Medium Screw Base**

Has self-contained reflector and operates directly from 110-125 volt house current with no auxiliary ballast required. Total input, 275 watts.

Has R-40 inside frosted bulb. Standard package, 6.

No. RS.....each \$9.95

\*Operate on a.c. only, with proper auxiliary equipment.

Schedule of discounts to purchasers without contract does not apply to this lamp. A discount of 25 per cent of list will be allowed on non-contract purchases of one or more standard packages of this lamp.

## G-E Germicidal Lamps

Short-wave ultraviolet energy, known as far ultraviolet, will kill air-borne bacteria, if the bacteria are exposed to a sufficient intensity for a long enough time.

The lamps listed, for small wattage consumption, produce potent ultraviolet, germ-killing radiation.

Should be used only in properly designed, correctly installed fixtures, to shield eyes and skin from direct exposure.

**Medium Bipin Base**

Watts	Each	Bulb (9741 Glass)	Ultra- violet Output Watts	Lamp Ordering Abbreviation	Std. Pkg.

## G-E White Night Light Lamps

**Candelabra Screw Base**

120 Volts

Designed for small plug-in receptacles to be used as night lights in homes. C-7 bulb.

Packed 120 in a standard package.

No. of Watts.....	7
Each.....	\$ .13
Lamp Ordering Abbreviation (Except Volts).....	7C7/W

## G-E H (Mercury) Lamps

G-E H lamps produce almost twice as many lumens per watt as incandescent lamps. Designed for use on standard lighting circuits with special auxiliary equipment designed to produce correct lamp starting and operating values.

When used in combination with equal lumens of incandescent light, objectives are seen in the approximate daylight colors. Several minutes are required for mercury lamps to come up to full brilliance.

**Type H-1**, 400 watts, consists of an interior arc tube, containing the electrodes and mercury, enclosed within an outer tubular

H-1

H-4

bulb which makes the lamp less subject to the effects of surrounding temperature.

**Type H-4**, 100 watts, is sometimes referred to as a capillary lamp, because the arc discharge takes place within a small capsule-like tube of quartz. The outer bulb serves merely as a protective container.

**Type H-9**, 3000 watts, consists of a single tube 48 inches long. Its light output of 120,000 lumens is more than any other lamp used in industrial lighting. Particularly recommended for high ceiling interiors.

	Mogul Screw Base	Adm. Base	S.C. Term Base

### McGill Crescent Coloring Fluid and Frosting

Used extensively during holiday seasons to color and frost lamps, by dipping, for temporary outdoor coloring schemes; not weatherproof. Recommended for lamps up to 60 watts.

Apply all tints and shades to lighted lamps; apply frosted white to unlighted lamps—then light and let dry.

Available in amber, red, blue, pink, ruby, green, canary, violet, purple and frosted white. When ordering, specify color.

Dipping cup is included.

## Trumbull Raymersion Prefabricated Infra-Red Ovens

Service Temperatures Up to 600°F.

Showing Convenient Maintenance Access

Section Showing Heavy Duty Insulation. Note Unique Design of Lamp-Positioning Sockets

Product Fully and Uniformly Immersed in Infra-Red Radiation and Circulating Convection Heat

Raymersion Ovens provide a greater range of heating application because of their more uniform heat distribution, broad available range of controlled heating rates (properly adapted to each and every application) and the higher operating temperatures available.

**Successful High Speed Raymersion Heating Applications.** Baking synthetic enamel finishes (including gloss and wrinkle type) on fabricated steel products; preheating castings for impregnation and sealing; force drying lacquers on aluminum, steel, tern plate and wood products; baking insulating varnishes on armatures—motor and transformer windings; drying pottery, chinaware—glazes and porcelain coatings; expanding gears and bearings for shrink fitting; surface drying of cleaning solutions and rust inhibitive coatings applied to metals; evaporating water, acetone and other chemical solvents; and drying adhesives—textile coatings—heating plastics—carbonizing wool.

## Wil-Son Patent-Flex Infra-Red Ovens

Overall length, 48 inches. Width of each lamp row, 8½ inches. Lamp sockets per row, 9.

Individual Lamp Row Units

**Individual Lamp Row Units.** For special applications where no stands are required.

May be attached to all Wil-Son oven sections. Also used for increasing the number of lamp rows in old installations.

**Medium Size Oven Sections.** For side heating applications. Stand height, 60 inches. Length of screw down base, 24 inches. Total contour adjustment between each row, 56°.

**Straddle Oven Sections.** For up or down heating applications. Stand height, 60 inches. Length of screw down base, 24 inches (width of oven is made to fit job). Total contour adjustment between each lamp row, 56°.

Ballasts are connected line to neutral. In no case use less than 250 volts.

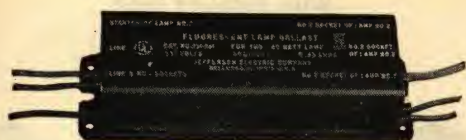

†Note that some ballasts may be used for two or more lamp sizes.

§For use with No. 59G440 only.

¶For use with all ballasts of circular construction; includes bracket for mounting.

## Jefferson Ballasts for Fluorescent Lamps

Hot Cathode Ballast with Ends Leads

Hot Cathode Ballast with End or Bottom Leads

Highest uniform quality, quiet operation, and long life.

Particularly suited to mounting on narrow wiring channels.

## Two Lamp Ballasts—High Power Factor

## With Built-In Compensator

## 14-Watt Lamp Ballasts

## Two Lamps in Series with One Ballast

No.	Lamp Watts	Circuit Voltage	Height	Width	Length	Approx. Watts Loss	Approx. Power Factor Per Cent	Approx. Weight Pounds
234-989	14	110-125	2	2 $\frac{1}{2}$	2 $\frac{1}{4}$	3.5	55	1
234-990	14	110-125	2	2 $\frac{1}{2}$	2 $\frac{1}{4}$	3.5	55	1

\*No compensator necessary for 100-watt ballasts.

Nos. 234-989 and 234-990 are identical except for mounting brackets.

No. 234-989 is equipped with hickey mounting bracket.

No. 234-990 has mounting ears on either side. Ballasts for 50 cycles can be supplied; prices on application.

### G-E Fluorescent Starters Two-Contact-Glow-Switch Types

No. FS-2

Ruggedly built to withstand shock and breakage. Provides carefully timed starting which results in longer lamp life and more satisfactory operation of lamps.

No. FS-4

No.	Per 100	Description	Car-ton	Std. Pkg.
FS-2	\$30.00	For 15-Watt 18-Inch and 20-Watt 24-Inch Fluorescent Lamps.....	10	100
FS-4	30.00	For 30-Watt 36-Inch and 40-Watt 48-Inch Fluorescent Lamps.....	10	100
FS-5	40.00	For 6-Watt 9-Inch and 8-Watt 12-Inch Fluorescent Lamps.....	10	50
FS-6	80.00	For 100-Watt 60-Inch Fluorescent Lamps.....	10	50

### Four-Contact—Thermal-Switch Types

No. FS-44

Provides starting at temperatures below 50°F. May also be used on d.c. circuits in conjunction with correct ballast, inductance unit, and proper series resistance.

No. FS-64

No.	Per 100	Description	Car-ton	Std. Pkg.

### G-E Watch Dog Starters

#### Glow Switch Type—Manual Reset Button

No. FS-20

No. FS-30

No. FS-40

No. FS-100

A precision lamp starter and stopper. Protects lamp throughout its burning life to start it properly and, when lamp is about to die, cuts itself out of the circuit cutting off the current from the lamp. This prevents the lamp from blinking and prolongs the life of the ballast and the starter itself. Each time the unit is lighted it preheats the electrodes within a measured time preventing the electrodes from discharging more than the minimum amount of emission material required.

Under test conditions, the life of the starter is 25,000 hours, outlasts five ordinary starters.

Manual reset button pops up when starter cuts off on dead lamp; reset by pressing when new lamp is inserted, no cooling period is required.

Representative starter socket: Nos. 78X769 or 95X299; No. FS-100 for No. 95X180 representative starter socket.

Standard package, 100.

No.	With 2 Contact Base			With 4 Contact Base

### G-E Fluorescent Lampholders

#### With Rotating Lock

250 Volts—660 Watts

No. 78x354

No. 78x729

No. 95x291

#### Medium Bi-Pin Lampholders

Designed for 1-inch T-8 and 1½ T-12 fluorescent lamps for either flush or surface mounting.

Wiring is protected with plastic cover plate.

Lampholders are held to reflector or wiring channel with one screw and nut. Binding screws take conductors up to size 14 solid wire. Two of these devices are required for each lamp where a separate starter socket is used.

Conventional mounting requires one No. 78x354 or No. 78x491 and No. 78x729 or No. 78x736.

Rotating lock action permits easy installation of lamp and holds lamp securely in place.

**Carton** pack is furnished with 1-inch screw and nut.

No.	Per 100	Description	*Car-ton	Std. Pkg.
78x354	\$18.00	Black Plastic, For 40-Watt 48-Inch, 30-Watt 36-Inch 20-Watt 24-Inch, 15-Watt 18-Inch, and 14-Watt 15-Inch Fluorescent Lamps.....	10	100
78x491	19.80	White Plastic, Same as above...	10	100

#### Medium Bi-Pin Combination Lampholders

Designed for use with 1-inch T-8 and 1½-inch T-12 fluorescent lamps.

Rotating lock action provides easy insertion and removal of lamps and affords safe locking action.

**Carton** pack is furnished with 1¼-inch mounting screw and nut.

No.	Per 100	Description	*Car-ton	Std. Pkg.
78x729	\$32.50	Black Plastic, for 40-Watt 48-Inch, 30-Watt 36-Inch, 20-Watt 24-Inch, and 15-Watt 18-Inch Fluorescent Lamps and FS-4, FS-30, or FS-40 Starters.....	10	100
78x736	34.30	White Plastic Lampholder, Black Plastic Starter Socket for Same Lamps and Starters as above...	10	100
95x291	34.30	White Plastic Lampholder, Black Plastic Reversed Starter Socket for Same Lamps and Starters as above.....	10	100

\*Also available in bulk pack. Screws and nuts not furnished with bulk pack unless one of the following lengths is specified: length A, 1 inch; length B, ½ inch; length C, 1¼ inch.

**G-E Medium Bi-Pin Fluorescent Lampholders****With Rotating Lock****250 Volts—660 Watts****Butt-On Types****For Surface Mounting****No. 95X311****No. 95X217**

Designed for surface mounting.

Nos. 95X168 and 95X311 require No. 4-36 mounting screws. All others have clearance holes for No. 4 screws.

Screws are not furnished.

No.	Per 100	Description	Car-ton	Std. Pkg.
95X168	\$25.00	White Plastic, Threaded Mounting Inserts for 14 to 40-Watt T-8 and T-12 Fluorescent Lamps—Two 18-Inch No. 18 .025-Inch Fixture Wire Leads, Stranded; Stripped 1/2-Inch	10	100
95X311	22.40	Black Plastic, Same as above Except Leads are No. 18 AF Fixture Wire, One 8-Inch and One 36-Inch *Long; Stripped 1/2-Inch.	10	100
95X217	24.20	White Plastic, Same as No. 95X168 Except has Eyelet Mounting Holes Instead of Threaded.	10	100
95X312	22.40	Black Plastic, Same as No. 95X217.	10	100

**For Flush Mounting****No. 78X464**

Designed for 1-inch T-8 fluorescent lamps for narrow channel wiring work, show-case lighting, and side wall fixtures. Wiring is protected with plastic cover plate. One screw mounting requires No. 6-32 screw. Screw is not furnished.

No.	Per 100	Description	Car-ton	Std. Pkg.
78X464	\$22.00	Black Plastic for 15-Watt, 18-Inch and 30-Watt, 36-Inch T-8 Fluorescent Lamps.	10	100
78X492	24.20	White Plastic, Same as above.	10	100

**No. 95X178 Weatherproof Types**

Designed for enclosed outdoor lighting equipment. Spring mounting bracket. Approved by Underwriters' Laboratories for enclosed outdoor applications such as theater marquees and display lighting. Two-hole mounting requires No. 6 screw.

Screws are not furnished.

No.	Per 100	Description	Car-ton	Std. Pkg.
97X178	\$66.00	For 14 to 40-Watt T-8 and T-12 Fluorescent Lamps—No. 18 2-Conductor 1/2-Inch POSJ Cord Lead, 10 Inches Long.	10	100

\*Can be furnished with two 18-inch leads in quantities of 1000 or more at no extra cost.

**G-E Large Bi-Pin Fluorescent Lampholders****With Rotating Lock****No. 95X102****No. 95X153**

**No. 95X102** is designed for 2 1/8-inch T-17 fluorescent lamps for either flush or surface mounting. Flush mounting requires No. 6-32 screws; surface mounting, No. 6 screws (no screws are furnished). Wiring is protected with plastic cover plate. Two tapped holes are provided for holding a mounting bracket to channel or reflector. Binding screws take conductors up to size 14 solid wire. Rotating lock action permits easy installation and removal of lamps. Two of these devices are required for each lamp where a separate starter socket is used. Conventional mounting requires one No. 95X153 and one combination lampholder and starter socket. For 250 volts, 660 watts.

**No. 95X153** is exactly the same as No. 95X102 except that it is designed for 600 volts, 660 watts.

No.	Per 100	Description	Car-ton	Std. Pkg.
95X102	\$37.80	White Plastic, with Bracket, for 65-Watt 36-Inch, and 100-Watt 60-Inch Fluorescent Lamps.	10	50
95X153	36.90	White Plastic, without Bracket, for 65-Watt 36-Inch, and 100-Watt 60-Inch Fluorescent Lamps.	10	50

**G-E Large Bi-Pin Combination Fluorescent Lampholders****With Rotating Lock****250 Volts—660 Watts****No. 95X123**

Combination lampholder and 4-contact starter socket. Starter socket will accommodate both 2-contact and 4-contact starters.

Illustration shows standard combination of lampholder and starter socket. Also furnished with the starter socket assembled in the following positions: No. 95X206 with starter socket reversed; No. 95X186 with starter socket inverted.

Mounting holes require same size screws as No. 95X153 listed above.

No.	Per 100	Description	Car-ton	Std. Pkg.
95X123	\$65.10	White Plastic Lampholder with Bracket, Black Plastic Starter Socket, for 65-Watt 36-Inch and 100-Watt 60-Inch T-17 Fluorescent Lamps and FS-6, FS-64, FS-100, or FS-102 Starters.	10	50
95X184	63.80	Same as above but without Bracket	10	50
95X186	65.10	White Plastic Lampholder with Bracket, Black Plastic Inverted Starter Socket for 65-Watt 36-Inch and 100-Watt 60-Inch T-17 Fluorescent Lamps and FS-6, FS-64, FS-100, or FS-102 Starters.	10	50
95X188	63.80	Same as above but without Bracket	10	50
95X206	63.80	White Plastic Lampholder Without Bracket, Black Plastic Reversed Starter Socket, for 65-Watt 36-Inch and 100-Watt 60-Inch T-17 Fluorescent Lamps and FS-6, FS-64, FS-100, or FS-102 Starters.	10	50

### G-E Miniature Bi-Pin Fluorescent Lampholders

250 Volts—75 Watts

No. 78X715

No. 78X723

No. 95X432

Designed for flush mounting. No starter socket is needed as starter socket is integral part of ballast.

Nos. 78X715 and 78X723 should be purchased in pairs as one each is necessary for each individual lamp.

No. 95X432 is interchangeable at either end of the lamp.

Has one hole mounting and requires No. 6-32 screws. Screws are not furnished.

No.	Per 100	Description	Car- ton	Std. Pkg.
78X715	\$32.50	Black Plastic for Miniature 6 and 8-Watt T-5 Fluorescent Lamps.....	10	50
78X723	32.50	Same as above Except Mounting Bracket is Reversed.....	10	50
95X432	27.70	Black Plastic for Miniature 6 and 8-Watt T-5 Fluorescent Lamps, Two 6-Inch No. 18 AF Fixture Wire Leads.....	10	50

### No. 95X276 G-E Miniature Bi-Pin Butt-On Type Fluorescent Lampholders

Designed for surface mounting. Leads are No. 18 stranded AF fixture wire, 6 inches long, one white and one black.

Uses No. 4 mounting screws. Screws are not furnished.

No.	Per 100	Description	Car- ton	Std. Pkg.
95X276	\$18.00	Black Plastic—Two 6-Inch Wire Leads, for Miniature 6 to 8-Watt T-5 Fluorescent Lamps....	10	100

### G-E Manual Starter Switches

Designed for use with 20-watt T-12, 15-watt T-12 or T-8, 14-watt T-12, 8-watt T-5 and 6-watt T-5 fluorescent lamps.

May also be used with 14-watt T-12, operated two-in-series with a special filament lamp as ballast.

Single hole mounting,  $1\frac{1}{32}$ -inch hole.

Black plastic base, white plastic handle.

95X266

No.	Per 100	Description	Car- ton	Std. Pkg.
95X266	\$71.50	For Two Lamps, six 6-inch No. 18 AF Fixture Wire Leads stripped $\frac{1}{2}$ -inch (2 Red, 2 Black, and 2 Blue)	10	100
95X292	68.20	For One Lamp, four 6-inch No. 18 AF Fixture Wire Leads Stripped $\frac{1}{2}$ -inch (2 Black, 2 Blue)	10	100

### G-E Medium Bi-Pin Fluorescent Lampholders

250 Volts—660 Watts

Ejector Types

No. 78X914

No. 78X915

Designed for 1-inch T-8 fluorescent lamps for narrow channel wiring work, show-case lighting, and side wall fixtures. Especially adaptable for use in show-case lighting equipment where reflector housings are close-fitting.

To be used in pairs requiring No. 6-36 screws.

Screws are not furnished.

No.	Per 100	Description	Car- ton	Std. Pkg.
78X914		Black Plastic, Combination Lampholder and Starter Socket for 15 and 30-Watt Fluorescent Lamps and FS-2, FS-4, or FS-40 Starters.....	10	100
	\$48.40			
78X915		Black Plastic, Lampholder Only, Companion Device for above.....	10	100
	26.40			

\*Underwriters' Laboratories have approved these devices for 600-volt, 660-watt service when used in instant-starting circuits.

†Also available in bulk pack. Screws and nuts not furnished with bulk pack unless one of the following lengths is specified: length A, 1 inch; length B,  $\frac{1}{2}$ -inch; length C,  $\frac{1}{16}$ -inch.

### No. 95X498 G-E Twin Turret Lampholders

Designed for 40-watt fluorescent lamps. Made of sturdy metal and is available in white only. Accommodates either the FS 40 Watch Dog or the standard FS 4 starter.

May be mounted on any flat surface with two No. 8 mounting screws, preferably with lock washers under the screw heads.

Should be spaced  $49\frac{1}{8}$  inches  $\pm 0-\frac{1}{16}$  inches apart measuring from the back of one turret to the back of the other.

Leads should be stripped and tinned, inserted through the entrance holes and secured by screws at top.

No. ....	95X498
Per 100 .....	\$176.00
Carton .....	5
Standard Package .....	50

## G-E Slimline Fluorescent Lampholders

No. 95X637, High Voltage End

No. 95X638, Low Voltage End

Medium single pin, white plastic type for 72 or 96-inch T-8 Slimline lamps; 42 or 64-inch T-6 Slimline lamps. Binding screws are located in base.

Has two-hole mounting to flat surface using No. 8 screws. Distance from lamp center to mounting surface (bottom of lampholder),  $1\frac{1}{16}$  inches. May be spaced so that center of one lamp to center of next lamp measure 2 inches.

No.	Per 100	Description	Car-ton	Std. Pkg.
95X637	\$77.00	High Voltage End.....	10	100
95X638	77.00	Low Voltage End.....	10	100

## G-E Slimline Fluorescent Lampholders

## For Narrow-Channel Lighting

No. 95X671, High Voltage End With Bracket

No. 95X672, Low Voltage End With Bracket

No. 95X672, Low Voltage End With Bracket

No. 95X670, Bracket Only

Designed for 42-inch and 64-inch T-6 Slimline fluorescent lamps. Particularly suited for narrow channel lighting.

Made of sturdy white plastic. Holds the lamps securely in position.

Has a single mounting hole which accommodates a No. 8 screw. Binding screws are conveniently located under the back cover.

One No. 95X671 lampholder and one No. 95X672 or 95X683 lampholder make up a pair for one lamp. No. 95X672 is furnished with a trigger ejector for easy lamp removal or insertion even in extremely narrow channels.

No. 95X670 bracket is available for mounting to the reflector, and is made so that the lampholder can be snapped into the bracket after its assembly to the reflector. One bracket should be ordered for each lampholder.

## G-E Separate Starter Sockets

250 Volts—660 Watts

No. 78X769

No. 95X299

Designed for use where it is desired to locate the starter at a distance from the lampholder. Sockets are black plastic with reinforced plastic base.

For varying height of starter sockets, use spacer No. 78X770.

No. 95X299 is a companion device to Butt-On type lampholders.

No.	Per 100	Description	Car-ton	Std. Pkg.

## No. 95X180 Separate Starter Sockets

250 Volts—660 Watts

Designed for use where it is desired to locate the starter at a distance from the lampholder.

Black plastic starter socket with reinforced plastic base.

Furnished with  $*1\frac{1}{16}$ -inch mounting screws.

No.	Per 100	Description	Car-ton	Std. Pkg.
95X180		Black Plastic for 4-Contact Starters FS-44, FS-64, and FS-100 and 2-Contact Starters FS-6 and FS-102.....	10	50
	\$26.80			

\*Also available in bulk pack. Screws and nuts are not furnished with bulk pack unless one of the following lengths is specified: length A, 1 inch; length B,  $\frac{1}{2}$ -Inch; length C,  $1\frac{1}{16}$ -inch.

## Hubbell Fluorescent Lamp Starters and Sockets

660 Watts, 250 Volts

No. FS-2 Starter No. FS-4 Starter No. 2942

A new development makes the essential starting switch and condenser of a fluorescent lamp auxiliary replaceable. Heretofore, the switch and condenser, assembled with a choke coil, comprised a complete auxiliary unit.

Now, the switch and condenser are mounted in a small aluminum container fitted with contacts. This unit, designated as a starter, fits into the socket of the lampholders. When mounted, the starter projects through a reflector or channel surface immediately below the lamp.

The starter is inserted and locked in contact by a slight turn in a clockwise direction. Reversing the procedure removes the starter.

Auxiliaries are required.

Suggested Mounting Dimensions

## Hubbell Fluorescent Lampholders Twist Turn Contacting Flush or Surface Mounting 660 Watts, 250 Volts

Designed for 1 and 1½-inch fluorescent lamps, and may be used for either flush or surface mounting. Wiring is protected with insulation cover plate. Lampholder is held to reflector or wiring channel with one screw and nut. Wiring grooves take conductors up to size 14, solid wire. Casing of lampholder is of molded black or white bakelite.

## Bryant General Purpose Slimline Lampholders

### For Single Pin Lamps

Accommodates T6 (¾-inch diameter) and T8 (1-inch diameter) Slimline lamps. Binding screws are located in recessed base and covered by an insulating plate. Mounting holes for No. 8 screws on 1¼-inch centers.

No. 4373-W, 660 watts, 250 volts, is for low voltage primary and has two terminal connections. Arranged so that the primary circuit is not complete until the lamp pin is inserted, there-

fore the current in the high voltage circuit cannot flow to the No. 4374-W high voltage lamp holder until the lamp is in place.

No. 4374-W, 660 watts, 1000 volts, is for high voltage secondary and has single terminal connection. Spring supported contact provides push-pull principal of lamp insertion and removal.

Carton, 10. Standard package, 100.

H & H Fluorescent Lampholders and Starters

The starter switch and condenser are mounted in a small aluminum container fitted with contacts. This development makes the essential starting switch and condenser of a fluorescent lamp auxiliary easily replaceable.

The starter unit fits into the combination starter socket and lampholder. When mounted, the starter projects through the reflector or channel surface immediately below the lamp.

The starter unit is easily inserted and locked in contact by a short turn in a clockwise direction. If replacements are necessary reversing the process removes the starter.

A reactor is required when installed.

No. 234-952  
Pull Chain  
Two-Lamp

Insures positive and quick operation of the lamp, serving as "starting" and "on and off" control. Made in single and two-lamp types, with pull chain or button control. Housed in bakelite with metal parts protected against corrosion, and

equipped with silver contacts.

Single lamp switch is equipped with two sets of contacts, one of which acts as a conventional "off and on" switch, while the other momentarily connects the filament in series, as the switch knob in the manual type is turned clockwise or the chain of the pull type is operated.

Two-lamp switch controls three separate circuits; one for full "off and on" and two auxiliary sets of contacts for the starting filaments. Action and operation are identical to the single lamp type.

Packed 20 to the carton.

Newman Safety Fluorescent Lamp Changer and Safety Clips

Open jaws to full extent by pulling down on cord. Place open jaws on lamp, release cord and spring automatically turns lamp 90°—then lamp may be lowered. To install new lamp, have pins in lamp line up with slots in sockets from position where operator stands on floor. Insert lamp in sockets and pull operating cord which turns lamp 90°. Continue pull on cord until jaws open—then tool may be removed from lamp. Lamps cannot fall out of socket when safety clip is used. Will fit any standard socket, only one second to install. Held by spring tension. This safety wire clip does not interfere in any way with changing lamps from the floor when using the lamp changer.

## CurtiStrip Wiring Channel and Raceway

Facilitates installation of all types of lighting equipment and offers the maximum in convenience and flexibility for carrying current. Fishing of wires is eliminated and outlets can be introduced at any point or transferred as required. Snap-in cover can be easily cut to any length and snapped into the lips of the channel. Channel may be cut to any length with a hacksaw, or the sections can be coupled together to form a continuous channel.

	No.	Type	Each				
1 1/2	952-C1 1/2			18"	1	15	\$12.90
2	952-C2			2'	1	20	13.40
3	952-C3			3'	1	30	17.35
4	952-C4			4'	1	40	17.85
*	952-C*			Cont.	2 or More	40	
†2	952-CE2			2'	1	20	12.60

\*Order by number, following by length of run required, in multiples of 4 feet only, such as; No. 940-C 12 feet.

†2-foot extension section only for use with continuous fixtures made up of 4-foot lengths.

‡Prices for longer runs of wired CurtiStrip on application.

## Hangers and Fittings

## No. 9 Straps

For holding CurtiStrip against any flat surface. May be used with fluorescent reflectors or complete units. Fits between the reflector and channel.

No. 9.....each \$1.15

## No. 611 Hook Fitting

For chain suspension.

No. 611.....each \$4.45

## No. 612 Reducer Fitting

For 1/2 or 3/8-inch iron pipe mounting to top or side of channel.

Furnished with two screws and nuts.

No. 612.....each \$1.17

## Hangers

## No. 613

For mounting to outlet box in ceiling for direct lighting only.

Use two hangers for each section of fluorescent CurtiStrip up to 10 feet.

Lower end bolts to back of channel.

Standard suspension is 40 inches to top of CurtiStrip.

May be cut to any shorter length without threading. If longer suspension is desired, it can be supplied at slight additional cost.

No. 613.....each \$2.50

## No. 614—With Angle Fitting

For mounting to outlet box in ceiling for direct or indirect lighting. Suspension, 21 inches to top of CurtiStrip.

No. 613.....each \$3.90

No. 614.....each 3.40

## Supports

## No. 619

For mounting to outlet box in wall or other vertical surfaces. Connects to side of CurtiStrip channel.

Furnished with slip-ring style canopy.

One mounting bracket is recommended for each 18 or 24-inch section; two for longer sections.

No. 619.....each \$2.50

## Nos. 621 and 622

No. 621 is for mounting on top surface of wall case or other horizontal surfaces. Extension is adjustable.

No. 622 is for mounting on top surface of wall case or other horizontal surfaces. Extension is adjustable without cutting pipe.

No. 621.....each \$2.00

No. 622.....each 2.50

### Day-Brite Strip Lighting Units

One and Two-Lamp  
For 15, 20, 30, and 40-Watt Fluorescent Lamps  
110 Volts, 60 Cycles, A.C.

One-Lamp

Two-Lamp

Furnished wired with sockets, No-Blink starter, and high power factor ballast.

Channel, end caps, and reflector end plates are finished in baked aluminum gray enamel.

Channel cover is finished in baked super-white enamel. Available without reflector as well as with porcelain enamel and specular Alzak reflector in both symmetric and asymmetric shapes.

#### Without Reflectors

### Day-Brite Showcase Lighting Fixtures

For Two 18 and 36-Inch T-8 Fluorescent Lamps  
For 42 and 64-Inch Slimline Lamps  
110 Volts, 60 Cycles, A.C.

Concealed Ballast Box

Flush Ballast Box

Hanging Clips

A continuous fixture for showcase lighting.

Complete fixture consists of a reflector trough and hanging clips with an elbow at one end for down tubing connections. Ballast is located in either concealed or flush type ballast boxes installed in base of case.

Style FY down tubing includes tubing and parts for electrical connection from fixture through front corner of case to ballast box.

Style FZ down tubing includes tubing and parts for electrical connection from fixture through back corner of case to ballast box.

Concealed ballast box is designed for installation under case. Flush mounting type box is designed for installation at base of case and has a face plate including a toggle switch control.

Hanging Clips are furnished with fixture. Specify type required when ordering. Type F hanging clip will be furnished unless otherwise specified.

Made of steel and are finished in satin nickel plate, or in any standard lacquer finish.

Reflector is finished in baked super-white enamel.

Plated Finish No.	Type	No. of Lamps	Size Lamp Inches	Fixture Length Inches

1618	Slimline	2	64	131 1/2 to 144

Prices on request.

## Day-Brite Show Window Lighting Fixtures

For 20, 40, and 100-Watt Fluorescent Lamps

110 Volts, 60 Cycles, A.C.

Furnished wired and includes sockets, No-Blink starters, and high power factor ballast.

Reflector is designed for symmetric distributions.

Reflector is of specular alzak and is easily removed from housing for access to control equipment and for mounting operations.

Top of housing is provided with mounting holes and 1/2-inch knockouts for installation and line connections, and is finished in baked lustre aluminum enamel.

Ends, front, and back are provided with 1/2-inch knockouts for thru wiring so that these fixtures can be mounted end-to-end or parallel.

No.	Each	Lamp Watts	DIMENSIONS, INCHES		
			Length	Width	Depth
1216	\$33.75	20	24 1/4	12 3/4	5 1/2

## Day-Brite Wallcase Lighting Units

For One 15, 20, 30 and 40-Watt Fluorescent Lamps

110 Volts, 60 Cycles, A.C.

For wallcases, island display cases, etc.

Furnished wired and includes sockets, No-Blink starter, and high power factor ballast.

Reflector is porcelain enameled steel.

Housing is finished in aluminum lacquer and has 1/2-inch knockout at each end for electrical connections.

A knockout is also supplied in the reflector for installation of toggle or levolver switch.

No.	Each	Lamp Watts	Length Inches
412NB	\$17.65	15	18 1/4
413NB	18.70	20	24 1/4
414NB	24.20	30	36 1/4
415NB	26.25	40	48 1/4

Levolver switch, wired, furnished at \$2.00 additional.  
Toggle switch, wired, furnished at \$1.60 additional.

## Smithcraft Fluorescent Strips

For Single 20-Watt Lamp

For Single 40-Watt Lamp

110-125 Volts, 60-Cycles, A.C.

Approved by Underwriters' Laboratories, Inc.

For cove or ceiling lighting, kitchens, work rooms, etc. Die formed of heavy gage, cold rolled steel. Sockets and ballast are mounted on cover. The base has the Smithcraft rolled bead, which allows the cover to simply snap on and the two sections are securely locked together. The base has knockouts on top for various types of mounting; end knockouts for continuous installations. Completely wired ready to install with FS4 starters. All white finish with Supercoat baked enamel. Available with or without reflectors—for individual or continuous installation.

When ordering, specify catalog number and whether high power or low power ballasts are required.

Packed 4 in a carton. Prices do not include lamps.

## Curtis Standard Skylux Lighting Units

110-125 Volts A.C.

Approved by Underwriters' Laboratories

Has high power factor ballasts and FS-4 starters. Each basic unit is a complete luminaire. Can be used with one or more extension units to make a continuous run.

Moldings and end plates finished Satin Gray; reflector and lamp shield, Fluracite (white). Prices do not include lamps.

**Twin Skylux****For Two 40-Watt (48-Inch) Lamps Per Section**

For mounting on ceiling or suspension on hangers.

Total watts (including two-lamp ballast) per section, 95 watts. Can be wired for 220-250 volts a.c.

Furnished with coupling set for continuous run plus pair of end ornaments No. 6411. Overall height,  $6\frac{7}{8}$  inches. Width  $15\frac{3}{8}$  inches. Each extension section adds  $48\frac{1}{4}$  inches to length. For suspension use No. 624, one-stem hanger or No. 6442, two-stem hanger.

No. 895-C, Basic Twin Skylux.....each \$33.35

\*No. 896-C, Extension Twin Skylux.....each 32.35

\*No. 896-C is regular extension for Twin Skylux. Two-foot extension for two 20-watt lamps is No. 882-C, at \$25.40.

**Single Skylux****For One 40-Watt (48-Inch) Lamp Per Section**

For mounting along the right angle juncture of the wall and ceiling or for mounting horizontally on the wall below the ceiling line. Extension section is furnished with coupling set but without end ornaments.

Total watts (including ballast), 51 watts on 110-125 volts a.c., single lamp ballast; or 48 watts with two-lamp ballast. Can be wired for 220-250 volts a.c.

Overall height, 7 inches. Width,  $8\frac{1}{2}$  inches. Each basic section is  $48\frac{3}{8}$  inches in length and each extension section used will add  $48\frac{1}{4}$  inches to the total length.

No. 891-C, Basic Single Skylux.....each \$24.60

No. 892-C, Extension Single Skylux.....each 23.60

**Curtis Single and Twin-Stem Hangers****For Standard Skylux Units**

For use with Skylux units Nos. 895-C and 896-C only. Cannot be used with Single Skylux or "Low Brightness" Skylux.

Two No. 624 or one No. 6442 hangers required to hang individual unit.

Continuous runs require one more No. 624 single-stem hanger than the number of units in the run; if twin-stem hanger No. 6442 is to be used, one hanger is required for each section.

**No. 624 Single-Stem**

Single steel stem with a self-aligning canopy fitting, threaded lower end, lock nut, two heavy washers, and clamping nut.

No. 624.....each \$3.75

No. 6403, 12-Inch Extension.....each .72

No. 6404, 24-Inch Extension.....each 1.17

**No. 6442 Twin-Stem**

Two steel tube stems with  $\frac{5}{8}$ -inch outside diameter finished Satin Gray. Heavy nuts and washers are provided for end of each stem. Stems threaded for attaching through knockouts in top.

No. 6442.....each \$5.75

No. 6401, 12-Inch Extension.....each 1.42

No. 6402, 24-Inch Extension.....each 2.25

**Curtis "Low Brightness" Skylux Lighting Units****For Two 40-Watt (48-Inch) Fluorescent Lamps**

110-125 Volts, 60 Cycles, A.C.

For ceiling mounting in stores, offices, and other interiors. Has low brightness and a soft, silvery appearance when lighted.

Made of Alzak Aluminum with steel channel and ends.

Each luminaire is a complete unit in itself or may be used with other units to make up a continuous run.

Has high power factor ballast.

Total watts (including two-lamp ballasts) per section, 95½ watts. Can be wired for other voltages.

Furnished with coupling set and two end ornaments.

Finished in Alzak Aluminum with plastic star end ornaments.

Overall height,  $6\frac{7}{8}$  inches. Width  $11\frac{1}{2}$  inches. Individual section is  $48\frac{1}{16}$  inches in length and each additional unit will add  $48\frac{1}{16}$  inches to total length.

Prices upon Application

## Curtis "Forty-Sixty" Luminaires

For Two 40-Watt Fluorescent Lamps

110-125 or 220-250 Volts A.C.

Approved by Underwriters' Laboratories

Designed for eye comfort. Used in offices, class rooms and drafting rooms.

The low brightness blends with the illuminated ceiling, producing a comfortable field of vision. High levels of illumination without distracting and harmful glare are readily attained.

**Light Control.** The ceiling is illuminated by an indirect component of approximately 40 per cent of the light output. The 60 per cent direct component is louvered to provide 35° crosswise and 25° lengthwise shielding.

**Construction.** Reflectors, louver fins, and canopy are made of aluminum. Wiring channel, ends, and hanger stems are made of steel. End ornament is made of plastic. Louver is hinged and will swing down for cleaning and relamping or for access to the wiring channel. Has no horizontal reflecting or diffusing surfaces to collect dust. Special 12-inch two-stem hanger permits easy installation. Other length hangers are available, prices on request.

Furnished with high power factor ballast and FS-4 starters. For two 40-watt lamps, total watts approximately 95.

Finished in satin aluminum. Alzak aluminum reflectors and louver fins. White Fluracite wiring channel and end plates. Ornamental star in Ivorytone.

**Dimensions.** Width, 12½ inches. Depth of body, 5½ inches. Length, 48¾ inches, including ornaments. Stem hanger suspension, 12 inches, ceiling to top of body.

**Continuous Luminaires.** For continuous fixture with single stem hangers located between sections and at the ends of the run, order one 4-foot basic unit and as many 4-foot extension sections as are needed to complete the run.

Basic unit is packed with two hangers for the ends; extension section with one hanger. Wire entrance can be made through any hanger. Allow 48¾ inches on centers for spotting hangers except at ends where 44⅞ inches o.c. is allowed. If continuous fixtures are wanted with centrally located two-stem hangers, order the same unit as for individual mounting. Connectors are furnished with all units.

**No. 4060-C.** Two-stem unit. Wired for 110-125 volts.

Each, less Lamps..... \$37.00

**No. 4060-D.** Same as No. 4060-C but wired for 220-250 volts.

Each, less Lamps..... \$37.00

**No. 4060-CB.** Basic unit for two 40-watt lamps. For continuous fixtures with single-stem hangers. Wired 110-125 volts.

Each, less Lamps..... \$38.40

**No. 4060-DB.** Same as No. 4060-CB but wired 220-250 volts.

Each, less Lamps..... \$38.40

**No. 4060-CE.** Extension section for two 40-watt lamps. For continuous fixtures with single-stem hangers. Wired 110-125 volts.

Each, less Lamps..... \$36.00

**No. 4060-DE.** Same as No. 4060-CE but with 220-250 volts.

Each, less Lamps..... \$36.00

## Coefficients of Utilization in Per Cent

Room Index	CEILING								
	75 PER CENT			50 PER CENT			30 PER CENT		
	50 Per Cent	30 Per Cent	10 Per Cent	50 Per Cent	30 Per Cent	10 Per Cent	30 Per Cent	10 Per Cent	10 Per Cent

For average conditions a maintenance factor of 75 per cent is suggested.

## No. 4061-C

For Two 100-Watt Fluorescent Lamps

Same as No. 4060-C except that it is 60¾ inches long and arranged for use with two 100-watt lamps.

Distribution is similar to that of the No. 4060-C.

Can be used in continuous runs with single-stem hangers. Allow 60¾ inches on centers for spotting hanger except at ends of run where 56⅞ inches is correct.

**No. 4061-C.** Two-stem unit. Wired for 110-125 volts.

Each, less Lamps..... \$59.10

**No. 4061-D.** Same as No. 4061-C but wired 220-250 volts.

Each, less Lamps..... \$59.10

**No. 4061-CB.** Basic units for continuous fixtures with single-stem hangers. Wired 110-125 volts.

Each, less Lamps..... \$58.90

**No. 4061-DB.** Same as No. 4061-CB but wired 220-250 volts.

Each, less Lamps..... \$58.90

**No. 4061-CE.** Extension section for continuous fixtures with single-stem hangers. Wired 110-125 volts.

Each, less Lamps..... \$56.50

**No. 4061-DE.** Same as No. 4061-CE but wired 220-250 volts.

Each, less Lamps..... \$56.50

## No. 51 Curtis Anniversary Luminaires For Four 40-Watt Fluorescent Lamps An Exceptionally Shallow 4-Lamp All Metal Unit

Pendant luminaire of modern design for four 40-watt fluorescent lamps. The louvered bottom is hinged so that it may be opened from either side or completely removed. Lamps and starters may be changed from above without opening louver. Louver is finished white Fluracite and provides 30 degrees crosswise and lengthwise shielding of the lamps. The attractive dart pattern of the louver adds interest as well as being an integral part of the construction. The side panels are designed so that the lamps are louvered and reflected light is utilized to illuminate and create a decorative pattern. The end plates are finished a light gray with a plastic end ornament which adds to the functional design of the luminaire.

The Curtis "51" is of the general diffusing type with the top completely open to better utilize the light from the lamps for indirect lighting. The direct light is effectively

shielded and provides higher levels of illumination for merchandising. The illumination characteristics of the "51" gives it greater flexibility for application to a wide range of lighting installations. (Stores, public buildings, offices, etc.)

Installation on any type of ceiling is simplified by using Curtis hangers for either individual mounting or in continuous runs. Two-stem hangers and single-stem hangers are finished light gray, matching the end plate of the "51." Standard suspension is 12 inches from ceiling to top of body. Stems for 18, 24, 36 and 48-inch suspension are carried in stock.

**DIMENSIONS:** Width, 18 inches; length, including ornament, 51 $\frac{3}{8}$  inches; length, without ornament, 50 $\frac{1}{8}$  inches; overall depth, 4 $\frac{1}{2}$  inches; depth of body, 3 inches.

Net weight, 33 pounds.

No. 51 C, With Twin Stem Hanger. Weight 32 Pounds.....	each \$55.85
No. 51 CB, With Two Single Stem Hangers. Weight 32 Pounds.....	each 57.25
No. 51 CE, With Single Stem Hanger and Coupling. Weight 31 Pounds.....	each 54.85

## Curtis Luminaires For Four 40-Watt Fluorescent Lamps

110-125 Volts  
Approved by Underwriters' Laboratories

Used as an individual unit or in continuous runs for pendant or ceiling mounting.

Made of steel with crystal glass panels, lightly sanded, which can be removed for cleaning. Hinged louver gives access to lower lamps. Canopy conceals heavy supporting bridge. End ornaments are removable and knockouts in end plates permit continuous wiring. Allow 48 $\frac{1}{16}$  inches length per unit in spotting hangers.

Has high power factor ballasts and FS-4 starters. Total watts, approximately 191. Furnished with connectors. Finish is Satin Gray with white Fluracite louver.

Dimensions, 49 $\frac{1}{4}$ x14x6 $\frac{1}{8}$  inches.

### No. 1400 Starlux

Suspension to top of body, 34 inches.

No. 1400, less Lamps.....	each \$52.50
No. GX-207, Replacement Glass Panel.....	each 1.00

### No. 70610-XE

Similar to No. 1400 except equipped with upper reflector and ceiling moulding for ceiling mounting.

**DEPTH:** 10 $\frac{1}{8}$  inches.

No. 70610-XE, less Lamps.....	each \$60.00
No. GX-207, Replacement Glass Panel.....	each 1.00

No. 1400 Starlux

**Curtis Recessed Troffers**

For Two or Three 40-Watt Fluorescent Lamps

With Louver

With Glass Bottom

Equipped with side and end flanges and are easy to install in any type acoustical ceiling including T-bar construction where the T-bar does not support the unit.

Louvers are of the swing down type and provide shielding 35 degrees crosswise and 25 degrees lengthwise.

Glass panels are of diffusing glass so arranged to slide over each other for maintenance. Panels can be quickly removed where desirable.

Wireway is suspended from U shape support brackets which are adjustable for thickness of framing and plaster or acoustical material. Reflectors are drawn up to wireway with wing nuts by means of long bolts. Sections can be wired together in lengths convenient for installation and installed as a unit. Generally, one wire entrance will be sufficient for the entire run.

Each unit is 48 inches in length and fits into a 12-inch slot in the ceiling. This permits alignment of reflectors with acoustical ceiling patterns.

Width at bottom, over flanges, 13 $\frac{1}{4}$  inches.

Space required for recessing: 9 $\frac{1}{4}$  inches for two-lamp unit; 10 $\frac{1}{2}$  inches for the three-lamp unit.

All units, basic and extension, are carton packed for easy storage.

**Day-Brite Kingsway Commercial Lighting Fixtures**

For Two and Three, 20 and 40-Watt Fluorescent Lamps

For Four and Six 40-Watt Fluorescent Lamps

110 Volts, 60 Cycles, A.C.

Designed for surface mounting only as single unit or continuous runs.

Furnished wired and includes sockets, No-Blink starters, and high power factor ballasts for 110-volt a.c. operation.

Ends are of die-cast aluminum with a satin finish.

Side rails and intermediate straps are of die-formed steel finished in baked lustre aluminum enamel.

Fluted glass cylinders are an exclusive Day-Brite design and are sufficiently opaque to eliminate glare and conceal interior part of fixture. Glass cylinders are available in 24-inch lengths and are easily removed by lifting up and sliding over.

Interior reflector is finished in baked super-white enamel.

Single units are listed below for two and three 20-watt lamps; two and three 40-watt lamps; and four and six 40-watt lamps. The four and six-lamp units are double lamp length.

Continuous fixtures are supplied in basic end sections for four and six 40-watt lamps and fill-in end sections for two and three 40-watt and two and three 20-watt lamps. Each of these end sections includes one end plate and can be used at either end of the installation. Intermediate sections are available for two, three, four, and six 40-watt lamps but do not include ends.

A complete installation includes two end sections and the required number of intermediate sections to make up the desired overall fixture length. Couplings are required at each section joint.

Lamps are not included.

### Day-Brite Viz-Aid Commercial Lighting Units

For Two 40 and 100-Watt Fluorescent Lamps  
110 Volts, 60 Cycles, A.C.

Nos. 46203-4 and 55203-5

For surface and suspension mounting.

Furnished wired with sockets, No-Blink type starters, and high power factor ballasts for 110-volt a.c. operation.

Steel chassis and snap-on wireway cover finished in baked super-white enamel. Steel enclosure frame and hangers finished in baked lustre aluminum enamel.

Side panels are ribbed, diffused glass.

Center V-shaped louver is finished in baked super-white enamel. Enclosure is attached to chassis by spring clips with service chains provided for maintenance operations.

Lamps are not included.

No.	Each	Lamp Watts	DIMENSIONS, INCHES		
			Length	Width	Depth

\*Hanger length, 27 inches.

### Day-Brite Viz-Aid Continuous Lighting Fixtures

For Two 40 and 100-Watt Fluorescent Lamps  
110 Volts, 60 Cycles, A.C.

Designed for two-lamp surface or suspension type installations. Fixture of any desired length can be made up from parts listed below. Chassis is furnished wired with sockets, No-Blink type starters, and high power factor ballasts for 110-volt a.c. operation.

Basic assembly consists of standard chassis with surface mounting straps and a complete snap-on enclosure.

For surface type installation, order the required number of basic assemblies to make up complete fixture length. These are easily mounted and coupled by means of ceiling mounting straps.

For suspension type installation, order the required number of basic assemblies and figure one stem hanger for each assembly, plus one additional hanger to make up the number necessary for the entire run. The hangers are installed at the coupling points of the intermediate assemblies and at the ends of the end assemblies. These hangers have swivel fittings and an adjustable feature which allows over 1 inch of vertical adjustment.

No.	Each	Description	Length Inches
46202-4	\$42.90	40-Watt Basic Assembly	48 1/2
55202-5	76.20	100-Watt Basic Assembly	60 1/2
7719	4.15	Adjustable Hanger	28 1/2

### Day-Brite Topnotch Commercial Lighting Units

For Two 40-Watt Fluorescent Lamps  
110 Volts, 60 Cycles, A.C.

Nos. 46201-4 and 46205

Designed as a single unit for surface or suspension mounting. The 40-watt standard lamp fixture is furnished wired with sockets, No-Blink type starters and high power factor ballasts.

Steel chassis and snap-on wireway cover are finished in baked super-white enamel. Stamped ends and hangers are finished in baked lustre aluminum enamel.

No.	Each	DIMENSIONS, INCHES		
		Length	Width	Depth
46200-4	\$26.05	48 1/2	9 1/4	4 3/4
46201-4	31.55	48 1/2	9 1/4	*31 3/4

\*Hanger length, 27 inches.

### Day-Brite Topnotch Continuous Lighting Fixtures

For Two 40-Watt Fluorescent Lamps  
110 Volts, 60 Cycles, A.C.

Designed as a continuous installation for surface or suspension mounting. Fixture of any desired length can be made up from the parts listed below. The 40-watt standard lamp chassis is furnished wired with sockets, No-Blink type starters, and high power factor ballasts.

For surface type installation, order the required number basic chassis and figure one stem hanger for each assembly, plus one additional hanger to make up the number necessary for the entire run. Hangers are installed at coupling points of the intermediate chassis and at the end of the end chassis, and have swivel fittings and an adjustable feature which allows over 1 inch of vertical adjustment. Add a pair of end plates and the installation is complete.

Lamps not included

## Day-Brite Coronado Shielded Type Lighting Fixtures

For Four 40-Watt Fluorescent Lamps

110 Volts, 60 Cycles, A.C.

Designed for surface or suspension mounting using four fluorescent lamps. Furnished wired and includes sockets, No-Blink type starters, and high power factor ballasts. Steel louver and chassis are finished in baked lustre aluminum enamel.

Die-formed cut-out ends are backed with diffused plastic. Side panels are of ribbed, diffused glass. Enclosure is held in place by spring clip for easy installation and removal.

Service chains are provided for attachment to chassis so enclosure is supported in lowered position for maintenance operations. Hanger is furnished with swivel fittings and are finished in baked lustre aluminum enamel.

No.	Each	Type	DIMENSIONS, INCHES		
			Length	Width	Depth
46408-4	\$64.00	Surface	48 $\frac{3}{4}$	15	7
46409-4	69.50	Suspension	48 $\frac{3}{4}$	15	*34

\*Hanger length, 27 inches.

## Day-Brite Parkway Open Type Lighting Fixtures

For Four 40-Watt Fluorescent Lamps

110 Volts, 60 Cycles, A.C.

Designed for surface or suspension mounting using four fluorescent lamps.

Furnished wired and includes sockets, No-Blink type starters, and high power factor ballasts.

Chassis is steel and is finished in baked super-white enamel.

Die-formed steel ends are attractive and arranged to allow for relamping without being disturbed.

Hanger is fitted with swivel fittings and both hangers and ends are finished in baked lustre aluminum enamel.

No.	Each	Type	DIMENSIONS, INCHES		
			Length	Width	Depth
46406-4	\$47.00	Surface	48 $\frac{3}{4}$	11	6 $\frac{1}{4}$
46407-4	52.50	Suspension	48 $\frac{3}{4}$	11	*33 $\frac{1}{4}$

\*Hanger length, 27 inches.

## Day-Brite Paralume Lighting Fixtures

For Two, Three, and Four 20 and 40-Watt  
Fluorescent Lamps

110 Volts, 60 Cycles, A.C.

Designed for surface or suspension mounting using two, three, or four lamps.

Furnished wired and includes sockets, No-Blink starters, and high power factor ballasts.

Body is finished in baked super-white enamel with die-cast ends in satin finish with polished ornament.

No.	Each	No. of Lamps	Lamp Watts	DIMENSIONS, INCHES		
				Length	Width	Depth
8224-4	\$27.00	2	20	28	9 $\frac{1}{2}$	3 $\frac{1}{2}$
8248-BN	33.50	2	40	52	9 $\frac{1}{2}$	3 $\frac{1}{2}$
8324-2	39.75	3	20	28	11 $\frac{1}{2}$	4 $\frac{1}{4}$
8348-BN	51.00	3	40	52	11 $\frac{1}{2}$	4 $\frac{1}{4}$
8424-2	47.75	4	20	28 $\frac{3}{4}$	13 $\frac{1}{4}$	5 $\frac{1}{2}$
8448-BN	59.25	4	40	52 $\frac{3}{4}$	13 $\frac{1}{4}$	5 $\frac{1}{2}$

For suspension type fixtures, No. 9925 hanger, finished in lustre aluminum, is added to units listed at \$5.50 additional.

## Day-Brite Liteway Surface Type Troffers

For One or Two 40-Watt Fluorescent Lamps

110 Volts, 60 Cycle, A. C.

Designed for single unit or continuous runs using one or two fluorescent lamps.

Made of die-formed steel finished in baked super-white enamel.

Openings in side provide ceiling illumination, and removable louvers provide proper shielding.

One-lamp fixtures (Nos. 45120-4 and 45122-4) can be installed in pairs for Tulamp ballast operation. No. 45120-4 is wired with Tulamp ballast and No. 45122-4 is supplied with sockets and starter only and is to be wired to No. 45120-4 on installation.

Furnished wired, except as noted above, and include sockets, No-Blink starters, and high power factor ballasts.

No.	Each	No. of Lamps	DIMENSIONS, INCHES		
			Length	Width	Depth
45120-4	*\$59.50	1	48 $\frac{1}{8}$	11 $\frac{5}{8}$	10 $\frac{1}{4}$
45122-4	*59.50	1	48 $\frac{1}{8}$	11 $\frac{5}{8}$	10 $\frac{1}{4}$
45124-4	34.75	1	48 $\frac{1}{8}$	11 $\frac{5}{8}$	10 $\frac{1}{4}$
45220-4	43.10	2	48 $\frac{1}{8}$	11 $\frac{5}{8}$	10 $\frac{1}{4}$

\*Per pair.

**Day-Brite Recessed Troffer Fixtures**  
**For Acoustical and Plaster Ceilings**  
 110 Volts, 60 Cycles, A.C.

The complete line of Day-Brite Recessed Troffer fixtures includes both snap-in type, for use with Tee-Bar supported ceilings, and flange-type, for use with standard plaster and acoustical ceilings. Both are available with louver and with Holophane Controlens.

Made of heavy gage steel throughout.

Body is assembled of die-formed parts and the ends are provided with 1/2-inch knockouts for service connections.

Sockets and starter are supported on mounting straps allowing complete and easy removal of wireway cover for access to control equipment without disturbing fixture.

Interior, louver, and all exposed trim are finished in baked super-white enamel providing a diffused reflecting surface of high efficiency.

Furnished wired (through circuit wires not included) with sockets, No-Blink starters, and high power factor ballasts.

One-lamp fixtures can be furnished in pairs with alternate sections wired with Tulamp ballast for the most economical installation. When furnished in this manner, sockets, lamp starter, and Tulamp ballast is installed in one section with sockets and lamp starter only in the other. Connections between the two can be made on installation.

**With Louvers**  
**For One and Two 40-Watt Fluorescent Lamps**

Louver is designed to slide into position and requires no tools for installation or removal. Snap-in type fixtures are designed to snap into position and is supported by the same Tee-Bar that supports the acoustical ceiling.

With the flange-type fixtures, overhead suspension straps should be ordered. One suspension strap is recommended for each 4-foot section to be located approximately at coupling point, plus one additional strap for end section. Plaster frames are available on special order.

**With Holophane Controlens**  
**For Two and Three 40-Watt Fluorescent Lamps**

The Holophane Controlens Troffer is a shallower fixture than the louver type and is optically engineered to provide the utmost in output and controlled illumination.

The snap-in type fixture is snapped into position and is supported by the same Tee-Bar as the acoustical ceiling

material. The flange-type fixture has mounting holes along the side so that it can be fastened direct to a wood ground. Overhead suspension straps can also be used with this fixture, if desired. Plaster frames are available on special order.

**Leader Commercial Glass Enclosed  
Lighting Fixtures**  
For Two and Four 40-Watt Fluorescent Lamps  
110-125 Volts—60 Cycles—A.C.

Designed for offices, schools and stores.

Can be used in single or continuous run installations either mounted flush or hung from stems.

Glass panels are treated for low surface brightness.

Housing is made of 20-gage cold-rolled steel.

Operates on 110-125 volts, 60 cycles a.c. Other voltages on request. Also available for instant start operation at additional cost.

Finished in satin aluminum. Reflector finished in white, high gloss, chip-proof enamel.

**No. GL-240C** takes two 40-watt fluorescent lamps. Has UL and ETL approved high power factor ballasts and replaceable FS4 starters. Dimensions: length,  $48\frac{3}{8}$  inches; width,  $10\frac{1}{2}$  inches; height,  $7\frac{3}{8}$  inches. Shipping weight, 36 pounds.

**No. GL-440C** takes four 40-watt fluorescent lamps. Has UL and ETL approved Tulamp high power factor ballast and replaceable FS4 starters. Dimensions: length,  $48\frac{3}{8}$  inches; width,  $13\frac{3}{8}$  inches; height,  $7\frac{1}{4}$  inches. Shipping weight, 53 pounds.

**No. GL-240C**.....each \$28.36

**No. GL-440C**.....each 55.46

Stem and canopy assembly No. C-450, for pendent mounting, is furnished at additional cost.

**Leader Glass Enclosed Fluorescent Fixtures**  
For Four 40-Watt 48-Inch T-12 Fluorescent Lamps  
110-125 Volts—60 Cycles—A.C.

Designed for schools, offices, and institutions where the best possible light is necessary.

Parabolic reflectors provide maximum light output.

Louver design permits full downward light without side glare. Skytex ribbed glass provides greater diffusion of light, no glare, and adds to the beauty of the unit.

Takes four 40-watt, 48-inch, fluorescent lamps. Has Underwriters' Laboratories and ETL approved high power factor ballasts and FS4 replaceable starters. Operates on 110-125 volts, 60 cycles a.c. Other voltages available upon request. Also available for instant start operation at additional cost. Finished in silver-gray enamel with stainless steel trim. Reflectors are chip-proof white enamel.

Dimensions: length,  $48\frac{1}{4}$  inches; width,  $12\frac{1}{2}$  inches; height,  $7\frac{1}{2}$  inches. Shipping weight, 53 pounds.

**No. G-440C**.....each \$58.87

Stem and canopy assembly No. C-450, for pendent mounting, furnished at additional cost. Various stem lengths will be furnished on special order.

**Leader Officer-Deluxe Commercial  
Lighting Fixtures**  
For Two and Four 40-Watt 48-Inch  
T-12 Fluorescent Lamps  
110-125 Volts—60 Cycles—A.C.

For flush or suspended, single or continuous run installations.

White high gloss louver diffuses natural light brightness without sacrificing light output. Louver is a hinged snap lock type to provide swift, simple servicing.

Molded plastic translucent side panels give light transmission without glare. Also available with solid steel panels on request.

Operates on 110-125 volts, 60 cycles a.c. Other voltages and frequencies available on application. Also available for instant start operation at additional cost.

Wired units include sockets, type FS easily replaceable starters, and Underwriters' Laboratories and Electrical Testing Laboratories approved high power factor 2-lamp ballast.

**No. VL-240** takes two 40-watt, 48-inch, T-12 fluorescent lamps. Dimensions: length,  $49\frac{1}{2}$  inches; width,  $10\frac{3}{8}$  inches; height,  $3\frac{1}{8}$  inches. Packed in individual cartons. Shipping weight, 30 pounds.

**No. VL-440** takes four 40-watt, 48-inch, T-12 fluorescent lamps. Dimensions: length,  $49\frac{1}{2}$  inches; width,  $16\frac{1}{8}$  inches; height,  $3\frac{1}{8}$  inches. Packed in individual cartons. Shipping weight, 50 pounds.

Order couplers separately.

**Leader URC Research Luminaires**

**For Four 40-Watt 48-Inch T-12 Fluorescent Lamps**  
110-125 Volts—60 Cycles—A.C.

Designed to meet all better light, better sight requirements. Lends itself particularly to commercial installations. Can be hung individually or in continuous rows by pendant or ceiling mounting. Takes four 40-watt, 48-inch T-12 fluorescent lamps. Furnished with UL and ETL approved Tulamp ballasts and easily replaceable starter switches.

Available with or without louvers. Also available for instant start operation at additional cost.

End plates finished in silver gray enamel, channel in high reflecting chip-proof white enamel.

Both tracks A and B, for surface mounting, are furnished as standard equipment with each unit. Track A is used on single unit mounting. Track B is double type used when units are joined together end to end.

Dimensions: length 49 $\frac{1}{8}$  inches; width, 19 $\frac{1}{8}$  inches; height, 7 inches.

No. LR-440C Shipping Weight, 78 Pounds.....each \$49.27  
No. LRL-440C, with Louvers, Shipping Weight, 74 Pounds.....each 63.24

Stem and canopy assembly No. C-450 for pendent mounting is furnished at additional cost. Various stem lengths are available if specified.

**Leader High Level Open Type Commercial Lighting Fixtures**

**For Two and Four 40-Watt 48-Inch Fluorescent Lamps**  
110-125 Volts—60 Cycles—A.C.

Approved by Underwriters' Laboratories, Inc.

Used in schools, stores, and offices. Designed for single or continuous run installation, either surface or pendent mounting. Durable steel construction. Top finished in satin aluminum enamel; reflectors are chip-proof white enamel.

Available for instant start operation at additional cost.

No. L-240C takes two 40-watt, 48-inch fluorescent lamps. E.T.L. approved high power factor ballast and FS4 replaceable starters. Operates on 110-125 volts, 60 cycle a.c. Other voltages available on request. Dimensions: 49x8x5 inches. Shipping weight, 19 pounds.

No. L-440C takes four 40-watt, 48-inch, fluorescent lamps. E.T.L. approved high power factor ballasts, and FS4 replaceable starters. Operates on 110-125 volts, 60 cycle a.c. Other voltages available on request. Dimensions: 49x9 $\frac{1}{2}$ x5 $\frac{1}{2}$  inches. Shipping weight, 40 pounds.

No. L-240C.....each \$24.36  
No. L-440C.....each 42.84

Stem and canopy assembly No. C-450, for pendent mounting, is furnished at additional cost. Order connecting coupler separately for continuous run installations.

**No. 3002 Mitchell Luminaires**

**For Four 40-Watt Fluorescent Lamps**  
110-125 Volts, 60 Cycles A.C.

Approved by Underwriters' Laboratories

Approved by Fleur-O-Lier and Electrical Testing Laboratories for surface or suspension mounting.

Stroboscopic corrected.

Power factor over 90 per cent.

Wireway channel and reflector are made of heavy gage steel.

Ends are translucent plastic.

Dimensions: length, 48 inches; width, 10 inches; height, 5 $\frac{3}{4}$  inches.

Finished in white baked enamel.

For suspension mounting, use canopy and stem set No. 032ST (stems, 36 inches long;  $\frac{3}{8}$ -inch iron pipe).

Suspension fixtures furnished at extra cost.

No. 032ST, Suspension Set.....each 2.95

**No. 2044 Mitchell Open Type Luminaires**

**For Four 40-Watt Fluorescent Lamps**

110-125 Volts, 60 Cycles A.C.

Approved by Underwriters' Laboratories

Single Unit  
Suspension Mounted

Approved by Fleur-O-Lier and Electrical Testing Laboratories for general illumination.

May be surface mounted as single unit, or continuous row, or suspension mounted. Slides into place on metal tracks.

Stroboscopic corrected. Power factor over 90 per cent.

Has metal wireway channel. End plates finished in high satin aluminum.

Dimensions: length, 49 inches; width, 12 $\frac{3}{4}$  inches; height, 5 $\frac{1}{2}$  inches.

For suspension mounting, use canopy and stem set No. 032ST (stems, 36 inches long;  $\frac{3}{8}$ -inch iron pipe).

No. 2044.....each \$42.40  
No. 032ST, Suspension Set.....each 2.95

**No. 2032 Mitchell U.R.C. Luminares****For Four 40-Watt Fluorescent Lamps**

110-125 Volts, 60 Cycles A.C.

Approved by Underwriters' Laboratories

Designed for mounting directly to the surface of the ceiling, either as an individual unit or end-to-end to form a continuous row. Also used for pendent hanging.

Has metal wireway channel and end plates are satin aluminum. Equipped with double-strength ribbed ceramic-coated glass side panels and prismatic ribbed glass bottom panels.

Installed on metal tracks.

Dimensions: length, 48 $\frac{3}{4}$  inches; width 19 $\frac{3}{4}$  inches; height, 7 inches.

Channel is finished in white baked enamel.

For suspension, use canopy and stem set No. 032ST, furnished at extra cost.

No. 2032.....each \$51.95  
No. 032ST, Suspension Set.....each 2.95

**No. 3004 Mitchell Luminares****For Four 40-Watt Fluorescent Lamps**

110-125 Volts, 60 Cycles A.C.

Approved by Underwriters' Laboratories

**Single Unit  
Suspension Mounted**

Approved by Fleur-O-Lier and Electrical Testing Laboratories for single unit suspension mounting or continuous row surface or suspension mounting.

Stroboscopic corrected. Power factor over 90 per cent.

Made of steel with prismatic ribbed glass panels and end plates of satin aluminum having luminous translucent effect.

Dimensions: length, 48 inches; width, 17 $\frac{1}{2}$  inches; height, 6 $\frac{1}{2}$  inches.

Wireway channel is finished in white baked enamel.

For suspension mounting, use canopy and stem set No. 032ST.

Suspension fixtures furnished at extra cost.

No. 3004.....each \$44.35  
No. 032ST, Suspension Set.....each 2.95

**Nos. 3005 and 3007 Mitchell Luminares****For Two and Four 40-Watt Fluorescent Lamps**

110-125 Volts, 60 Cycle A.C.

Approved by Underwriters' Laboratories

**Single Unit  
Suspension Mounted**

Approved by Fleur-O-Lier and Electrical Testing Laboratories for single unit suspension mounting or continuous row surface or suspension mounting.

Stroboscopic corrected. Power factor over 90 per cent.

Made of steel with double-strength ceramic treated side panel and prismatic ribbed glass bottom panel. End plates are of satin aluminum having luminous translucent effect.

No. 3005, for two 40-watt lamps. Dimensions: length, 48 inches; width, 12 $\frac{1}{2}$  inches; height, 7 $\frac{1}{4}$  inches.

No. 3007, for four 40-watt lamps. Dimensions: length, 48 inches; width, 17 inches; height, 7 $\frac{1}{4}$  inches.

Metal parts finished in white baked enamel.

For suspension mounting, use canopy and stem set No. 032ST.

Suspension fixtures furnished at extra cost.

No. 3005.....each \$36.90  
No. 3007.....each 53.40  
No. 032ST, Suspension Set.....each 2.95

**Mitchell Louvered Luminares****For Two and Four 40-Watt Fluorescent Lamps**

110-125 Volts, 60 Cycles A.C.

Approved by Underwriters' Laboratories

**Single Unit  
Suspension Mounted**

Approved by Fleur-O-Lier and Electrical Testing Laboratories for individual suspension or continuous row surface mounting.

Stroboscopic tested. Power factor over 90 per cent.

Has full depth metal louvers, ceramic treated glass side panels, and satin aluminum end plates with luminous apertures. Made of steel.

No. 3009, for two 40-watt lamps. Dimensions: length, 48 inches; width, 12 $\frac{1}{2}$  inches; height, 8 $\frac{1}{4}$  inches.

No. 3011, for four 40-watt lamps. Dimensions: length, 48 inches; width, 17 inches; height, 8 $\frac{1}{4}$  inches.

Finished in white baked enamel.

For suspension, use canopy and stem set No. 032ST.

Suspension fixtures furnished at extra cost.

No. 3009, For 2 Lamps.....each \$39.95  
No. 3011, For 4 Lamps.....each 57.95

## Litecontrol Lighting Units

### F-70 Series

For Two and Four Fluorescent Lamps

Hinged-glass unit for offices, schools, stores, and all commercial applications.

For individual or continuous mounting; surface or pendant mounting.

#### For Two Fluorescent Lamps

No. F-72S, Surface.....each	\$43.30
No. F-72P, Pendant.....each	48.30
No. F-72C, Continuous....each	39.60
No. 72-3, End Cap for Continuous Runs.....each	1.80

#### For Four Fluorescent Lamps

No. F-74S, Surface.....each	\$66.50
No. F-74P, Pendant.....each	71.50
No. F-74C, Continuous....each	62.50
No. 74-3, End Cap for Continuous Runs.....each	2.00

### 90 Series

For Four Fluorescent Lamps

Combination hinged-glass sides and louvered bottom.

May be surface mounted, either as a single unit or in continuous runs, and pendant mounted.

No. 94S, Surface.....each	\$74.50
No. 94P, Pendant.....each	79.50
No. 94C, Continuous....each	68.90
No. 94-3, End Cap for Continuous Runs.....each	2.80

### 30 Series

For Two or Three Fluorescent Lamps

Completely recessed troffer type unit with Holophane Controlenses.

For continuous mounting where a 12-inch clear opening is available.

No. 32C, Two-Lamp Continuous.....each	\$56.30
No. 33C, Three-Lamp Continuous.....each	70.00
No. 32-3, End Cap for Continuous Runs.....each	1.50

### 9000 Series

For Two or Three Fluorescent Lamps

Flush troffer type unit using Holophane curved Controlenses.

No. 9052, Two-Lamp.....each	\$71.30
No. 9053, Three-Lamp.....each	85.00
No. 9052-3, End Cap.....each	4.50

### Series 15 Strip Fixtures

Designed for single or continuous mounting.

Made in four types: plain channel; angle reflector; and deep and shallow trough reflectors.

#### Plain Channel

No.	Each	Length Inches
15-SC-24	\$12.80	26
15-SC-36	17.30	38
15-SC-48	18.00	50

\*Furnished with square reflector.

### Exit Signs

Cutout letters are 5 inches high backed with red glass.

Trim is hinged for easy relamping.

Trim and surface boxes furnished with baked statuary bronze finish.

No. 5F, Flush Type.....each	\$14.50
No. 5E, Surface Type....each	15.80

**No. 604 F.S. Silvrescent Fixtures**  
**Suspension Type**  
**For Four 40-Watt Fluorescent Lamps**  
**Approved by Underwriters' Laboratories**

Used in executive and general offices, drafting rooms, stores, public buildings, banks, and hospitals as single unit or continuous runs.

Diamond reflector system assures high efficiency and minimum maintenance. The shallow body of the fixture is a little deeper than the lamps themselves.

**Construction Features:** Die-formed steel construction assures precision fit and permanent, trouble-free service. Special egg-crate type steel louver offers efficient shielding with minimum depth (only  $\frac{1}{2}$ -inch deep). Shield snaps on and off. Four positive-action spring grips fasten to steel pins in body of fixtures. Furnished with "Holdsure" latch construction which permits lowering of shield for cleaning or relamping without the need for completely removing shield for these operations.

**Light Output.** Well-balanced direct and indirect components are delivered. Certified (E.T.L.) output: 86 per cent; with louver, 77 per cent.

Equipped with approved, high power factor ballasts.

Sockets, starters, and starter sockets are Fleur-O-Lier approved.

Canopy, stems, end plates, diamond reflectors, and ballast housing are finished in white gloss Polymerin. Also available in cadmium plated finish at slightly higher cost.

No.	Each	No. of Lamps	Lamp Watts	DIMENSIONS, INCHES				Approx. Ship. Wt. Lb.
				Length	Width	Height	Depth	
604F.S.	\$81.40	4	40	49 $\frac{1}{2}$	13	26	2	42

**Nos. 80 and 160 Silvrescent Fixtures**  
**Ceiling Mounted**  
**For Two and Four 40-Watt Fluorescent Lamps**  
**Approved by Underwriters' Laboratories**

Used in executive and general offices, department stores, drafting rooms, public buildings, banks, schools, and hospitals as single unit or continuous runs.

No. 80 is a two-lamp unit and No. 160 is a four-lamp unit. Identical design makes them ideal companion pieces.

**Construction Features.** Made of heavy gage steel which prevents breakage and deterioration. No glass, plastic, or other breakable parts. Equipped with approved ballasts and accessories.

**Design Features.** Compact design results in a unit which is only  $5\frac{3}{4}$  inches deep and  $10\frac{1}{2}$  inches wide to accommodate either two or four 40-watt lamps. Effective side shielding at all normal viewing angles is accomplished by "Louveright" shielding with 50 per cent transmission. Egg-crate type steel shield, 6 inches wide with 1-inch square openings provides 45-degree shielding for the two middle lamps.

The shield is one piece, securely hinged, and is firmly fastened to the body by two "Holdsure" latches, permitting quick lowering of shield for easy access to starters and lamps.

Die-formed steel parts make for tight assembly and accurate alignment.

Finished in durable, easy to clean, white gloss Polymerin.

Shield may be cleaned by occasional brushing.

Furnished complete with shield.

80-E	64.70	2	40	49	10 $\frac{1}{2}$	5 $\frac{3}{4}$	45

\*Also furnished as a 2-lamp unit. Specify No. 80 for double stem suspension and No. 80E for single stem suspension (for continuous mounting).

†Continuous run.

## Nos. 80-S and 160-S Silvrescent Fixtures Suspension Type For Two and Four 40-Watt Fluorescent Lamps Approved by Underwriters' Laboratories

Used in executive and general offices, department stores, specialty shops, drafting rooms, public buildings, banks, schools, and hospitals as single unit or continuous runs.

**Construction Features.** Made of heavy gage steel which prevents breakage and deterioration. No glass, plastic, or other breakable parts; approved ballasts and accessories.

**Design Features.** Similar in appearance to Nos. 80 and 160. Compact design provides a unit which is only  $5\frac{3}{4}$  inches deep and  $10\frac{1}{2}$  inches wide to accommodate either two or four 40-watt lamps. Effective side shielding at all normal viewing angles is accomplished by "Louverright" shielding with 50 per cent transmission. Egg-crate type steel shields, 6 inches wide

with 1-inch square openings, provide 45-degree shielding for the two middle lamps.

The shield is in one piece, securely hinged, and is firmly fastened to the body by two "Holdsure" latches, permitting quick lowering of shield for easy access to starters and lamps.

Die-formed steel parts make for tight assembly and accurate alignment. For continuous mounting, units are furnished with single stem support and a simple shallow canopy which is available in variable lengths. Standard length is 18 inches.

Finished in durable, easy to clean, white gloss Polymerin.

Furnished complete with shield.

No.	Each	No. of Lamps	Lamp Watts	DIMENSIONS, INCHES				Type	Approx. Ship. Wt. Lb.
				Length	Width	*Height	Depth		
†160-S	\$81.90	4	40	49	$10\frac{1}{2}$	26	$5\frac{3}{4}$	Double Stem	50

80-SE	69.00	2	40	49	$10\frac{1}{2}$	26	$5\frac{3}{4}$	Single Stem, Continuous	45

\*To bottom of shield. †Also furnished as a 2-lamp unit. Specify No. 80-S for double stem suspension and No. 80-SE for single stem suspension (continuous mounting).

### Applications of Silvrescent Fixtures

View of One-Piece Shield  
Showing Full Access to Lamps and Starters

The shield may be cleaned by an occasional brushing. Effective shielding of center lamps is accomplished by 1-inch square openings in louver. Outside lamps are well shielded by slotted metal "Louverright" shields.

Continuous Mounting of Ceiling-Mounted Fixtures

Nos. 80 and 160 are butted together and furnished with a connecting strip to assure accurate alignment. Specify No. 80-E and 160-E.

Cut-Away End View  
Showing Lamp Positions

In two-lamp models, the "Louverright" shields are evenly illuminated by light directed to them from the two centrally located lamps.

Continuous Mounting of Nos. 80-S and 160-S

Single stem support for each unit. Shallow ceiling canopy. Alignment of fixtures assured by connecting strip. Specify No. 80-SE and 160 SE.

## Pittsburgh Permaflexor Presidential Series Fluorescent Luminaries and Troffers

For commercial, institutional, and industrial lighting purposes.

The Wilson, Tyler, Jefferson, and Van Buren Models are surface mounted or suspension mounted with hanger No. AH-201, individually or in a continuous row.

**Wilson Model**

Iridescent Linex Satinol glass side panels and fully-hinged egg-crate louver bottom assure well-shielded and efficient illumination as well as easy accessibility.

No.	Each	Lamps No. and Watts	Length Inches	Width Inches	Depth Inches	Shipping Weight Pounds
A-4240	\$51.08	2-40	48 $\frac{1}{8}$	15 $\frac{7}{8}$	7 $\frac{3}{4}$	46

A-1440	69.50	4-40	48 $\frac{1}{8}$	14	5 $\frac{1}{16}$	51

**Recessed Tulamp**

Has housing with removable V-trough section containing knockouts to accommodate lamp-holders, starter sockets, and starting switches. V-trough section telescopes into the inverted housing and is held by clips. Exposed face of trough serves as part of reflector. Egg-crate louver, mounted flush, is designed to shield lamp and eliminate glare. Exposed metal trim and louver finished in white enamel.

Wired complete, less starters. Plaster frames available.

No.	Each	Lamps No. and Watts	Overall Length Inches	Overall Width Inches	Ceiling Opening Inches	Depth Inches	Shipping Weight Pounds
RF-236-E	\$52.13	2-30	38	10 $\frac{3}{4}$	39 $\frac{1}{2}$ x9	6	20
RF-248-E	55.55	2-40	50	10 $\frac{3}{4}$	48 $\frac{1}{2}$ x9	6	28

All fluorescent units are furnished for operation on 110-125 volt, 60 cycle current, or 220-250 volt, 60 cycle; also available in 50 cycle at additional cost.

May also be furnished with instant-start ballast at extra cost. No lamps provided.

**Tyler Model**

Combines sound light engineering with functional design. Side panels are curved Skytex glass in Satinol finish. Bottom is egg-crate louver, hinged for easy maintenance.

No.	Each	Lamps No. and Watts	Length Inches	Width Inches	Depth Inches	Shipping Weight Pounds

A-2440	55.82	4-40	48 $\frac{1}{8}$	15 $\frac{7}{8}$	7 $\frac{3}{4}$	74

**AF Series Fluorescent Troffers**

Made to accommodate both a single row of 40-watt and two parallel rows of 40-watt fluorescent lamps.

Each troffer contains a removable inner section of wiring channel cover.

Flutex glass bottom panel conceals lamps, diffuses light, and reduces surface brightness. Glass rests in troffer frame and is easily removed by tilting.

Features a special snap-on frame designed for installation with acoustical ceiling sections of clip T-bar construction.

Finished in heat-resisting white enamel.

Both single and double row lamp series come in standard 4-foot lengths or any specified length: 12 inches wide, 8 $\frac{3}{4}$  inches deep.

PF Series are available for mounting in plaster, wood, or acoustical ceilings. Prices on request.

**Smithcraft Standard Lighting Fixtures**

For Four 40-Watt Fluorescent Lamps  
110-125 Volts and 220-250 Volts, 60 Cycles, A.C.  
Approved by Underwriters' Laboratories, Inc.

Designed for single unit or continuous runs using four fluorescent lamps.

Has an 85 per cent reflectivity.

Can be mounted directly on the outlet box without intervening space.

Side reflectors are parabolic, giving maximum down-lighting.

Ornamental socket shields also serve as lamp guards.

Completely wired with E.T.L. approved high power factor ballasts (Tulamp type), lamp sockets, and FS4 starters. FS40 No-blink starters are available at additional cost.

Furnished with all necessary fittings for continuous run installation at no extra charge.

Canopy (No. SS105) and two 30-inch stems, with non-turn stem lock, are available at extra cost.

Finished in white baked enamel and aluminum.

Packed 1 to a carton.

No.	Each	No. of Lamps	Watts	DIMENSIONS, INCHES			Ship. Wt. Lb.
				Length	Width	Depth	
S-4	\$42.65	4	40	49	14	3 1/4	25

If lightning-start ballasts are desired, prefix Q to number when ordering and add 3 pounds to weight.

Price does not include lamps.

**Smithcraft Minute-Man Canopies**

For hanging commercial lighting fixtures.

Eliminates fixture strap and provides greater safety and quicker installation of lighting fixtures.

Adapted for concealed or surface wired outlets.

**Method of Installation**

1. Place the canopy over outlet box stud and tighten nut which locks canopy permanently into position.

2. Take Smithcraft unit with non-turn stems and simply check into the keyholes. Then move stem to narrow end of slot. Fixture is now up and locked into place.

3. Make wiring connections to outlet in the customary manner and finish off by applying the decorative cover plate with the two screws.

No. SS105, Canopy and Two 30-Inch Stems... each \$4.10

**Smithcraft Dawn Lighting Fixtures**

For Four 40-Watt Fluorescent Lamps

110-125 Volts and 220-250 Volts, 60 Cycles, A.C.

Approved by Underwriters' Laboratories, Inc.

Designed for single unit or continuous runs using four fluorescent lamps.

Reflector of V-type design gives 80 per cent downlight.

Louver is hinged in two sections, with 32 openings per section, and is easily removable.

Completely wired with E.T.L. approved high power factor ballasts (Tulamp type), lamp sockets, and FS4 starters. FS40 No-blink starters are available at additional cost.

Furnished with all necessary fittings for continuous run installation at no extra charge.

Canopy (No. SS105), and two 30-inch stems, with non-turn stem lock, are available at extra cost.

Finished in white baked enamel and aluminum.

Packed 1 to a carton.

No.	Each	No. of Lamps	Watts	DIMENSIONS, INCHES			Ship. Wt. Lb.

A-4	\$70.65	4	40	49 1/2	17 3/4	3 1/2	48

If lightning-start ballasts are desired, prefix Q to number when ordering and add 3 pounds to weight.

Price does not include lamps.

**Smithcraft Vision Lighting Fixtures**

For Two and Four 40-Watt Fluorescent Lamps

110-125 Volts and 220-250 Volts, 60 Cycles, A.C.

Approved by Underwriters' Laboratories, Inc.

Designed for single unit or continuous runs using two or four fluorescent lamps.

Diffused ribbed glass removes all glare.

A special metal T section between the glass panels acts as a lamp baffle and assures perfect alignment for continuous mounting.

Completely wired with E.T.L. approved high power factor ballasts (Tulamp type), lamp sockets, and FS4 starters. FS40 No-blink starters are available at additional cost.

Furnished with all necessary fittings for continuous run installation at no extra charge.

Canopy (No. SS105) and two 30-inch stems, with non-turn stem lock, are available at extra cost.

Finished in white baked enamel and aluminum.

Packed 1 to a carton.

No.	Each	No. of Lamps	Watts	DIMENSIONS, INCHES			Ship. Wt. Lb.

If lightning-start ballasts are desired, prefix Q to number when ordering and add 3 pounds to weight.

Price does not include lamps.

**Smithcraft Horizon Lighting Fixtures****For Four 40-Watt Fluorescent Lamps**

110-125 Volts and 220-250 Volts, 60 Cycles, A.C.

Approved by Underwriters' Laboratories, Inc.

Frame is made of natural wood, finely lacquered and waxed to blend softly with the smart shop or wood-panelled office.

A sturdy steel top covers the fixture and provides a wiring channel and holder for pendant mounting.

Completely wired with E.T.L. approved high power factor ballasts (Tulamp type), lamp sockets, and FS4 starters. FS40 No-blink starters are available at additional cost.

Furnished with all necessary fittings for continuous run installation at no extra charge.

**No. HG-4.** Has crystal glass panel, sandblasted.

**No. HE-4.** Has steel egg-crate louver in one section with 279 openings.

Canopy (No. SS105) and two 30-inch stems, with non-turn stem lock, are available at extra cost.

Available with a closed top for complete downlighting or with two bands of perforated metal which provide 85 per cent downlighting with a spill of 15 per cent.

Wood finish: natural lacquered. Steel finish: white baked enamel. Packed 1 to a carton.

If lightning-start ballasts are desired, prefix Q to number when ordering and add 3 pounds to weight.

Price does not include lamps.

**Smithcraft Skylite Lighting Fixtures****For Four 40-Watt Fluorescent Lamps**

110-125 Volts and 220-250 Volts, 60 Cycles, A.C.

Approved by Underwriters' Laboratories, Inc.

Used in schools, offices, stores, institutions, etc.

Designed for single unit or continuous runs using four fluorescent lamps.

Side panels are of diffused glass.

Steel louver, 1 $\frac{1}{8}$ -inch deep, (136 openings) is hinged and is held in place by thumb screws.

Completely wired with E.T.L. approved high power factor ballasts (Tulamp type), lamp sockets, and FS4 starters. FS40 No-blink starters are available at additional cost.

Furnished with all necessary fittings for continuous run installation at no extra charge.

Canopy (No. SS105) and two 30-inch stems, with non-turn stem lock, are available at extra cost.

Slip-on reflectors used to obtain 65 per cent downlight are available at extra cost.

Finished in baked white enamel and aluminum.

Packed 1 to a carton.

## Wakefield Star Luminous Indirect Luminaires

For Two 40-Watt Fluorescent Lamps

With No. 14, Single Stems

Modern artificial lighting strives for two objectives. First, an even distribution of light intensity all over the room, and, second, the elimination of spheres of brightness contrasted with intervening dark areas.

The newest approach to the twofold objective of artificial lighting efficiency is the Star, a luminous indirect lighting unit which utilizes a molded, translucent Plaskon reflector of such density that the lighted luminaire is of approximately the same brightness as the illuminated ceiling.

When Star units are used in continuous runs, spaced in accordance with Wakefield engineering specifications, an evenly lighted ceiling is achieved which provides the sky-like effect of evenly distributed light, with no deep shadows or contrasts and without distracting glare from the light source.

Each 4-foot Star section utilizes two 40-watt fluorescent lamps which are accessible from the top of the reflector.

The molded reflectors and end caps are made of Plaskon, a molding compound which has been in continued use by The F. W. Wakefield Brass Company for over ten years. These Plaskon parts are

light in weight, non-electrostatic, non-shatterable, uniform in appearance, and will not support combustion.

All visible metal parts are finished in satin aluminum.

The reflectors are held in place by illuminated satin aluminum supporting bands, and are easily slid in and out of place for maintenance purposes without dis-assembly of the unit.

The Star has been under development for over two years and incorporates all advances in contemporary engineering, lighting performance, and ease of maintenance.

The Star achieves a lighting efficiency high above the standard.

## Single Unit—Twin Stem Suspension

Small rooms and corridors can be adequately illuminated with a single unit.

The two stem unit is 4-foot in length and is identical with the 4-foot sections used in continuous runs except that the single unit installation is equipped with twin stem suspension.

The appearance of the single unit matches those units which are used in continuous runs in every other detail.

## Wakefield Grenadier Diffused Direct Lighting Fixtures

### For Two 40-Watt Fluorescent Lamps

The Grenadier provides a type of direct-indirect lighting which is generally recognized to be highly efficient.

Diffusion is secured and the surface brightness of the lamp is masked with the use of a well designed louver. Further efficiency is provided by the design of the reflector.

All reflecting surfaces are turned downward so that they catch a minimum of dust. This feature results in lower maintenance cost because the unit requires less cleaning.

### Suspension Type

No. PG-2488

No. 2PG-2488

Two Grenadier models include the 4-foot suspension type and the 4-foot ceiling type. Both types are available for installation in continuous runs as they may be interconnected with standard parts from the factory or from stock.

The Grenadier is a well-shielded unit utilizing two 40-watt fluorescent lamps in each 4-foot section. All metal parts are finished in gray enamel. Side panels are translucent plastic which take on a warm ivory color when lamps are lighted.

### Ceiling Mounting

No. PG-2483

No. 2PG-2483

For rooms with ceilings of low or medium heights, ceiling type Grenadier is recommended. Canopies are finished in gray enamel to match the other metal parts.

Ceiling types, for continuous installation, are also available on order.

The single unit suspension type Grenadier is designed for installation in small rooms or corridors.

All Grenadiers have open top reflectors for lighting the ceiling area, and inverted reflectors for producing exceedingly high level illumination on working surfaces below.

Lamps are easy to replace as they are accessible through the top of the reflector, without removing the louver.

## Wakefield Beacon Model Diffused Direct Lighting Fixtures

### For Four 40-Watt Fluorescent Lamps

The proper utilization of fluorescent lamps provides for an excellent distribution of high level lighting. Great care must be given to the design of any fluorescent fixture in order that the lamps be sufficiently shielded to prevent eye fatigue as a result of surface brightness. On the other hand, the shielding must be so arranged that it does not seriously reduce the lighting efficiency.

### Suspension Type

No. B-448-W

No. 2B-448-W

The Beacon is made in two models. These include the suspension type and the ceiling type. Both are available for installation in continuous runs as they may be interconnected as ordered from factory or stock.

The Beacon features pleasing appearance and a

high light distributing efficiency. Attractive side panels of etched, ribbed glass and a louver of unusual beauty combine to create a pleasing harmony.

Four 40-watt lamps are adequately shielded to provide a soft, even distribution of light.

### Ceiling Mounting

No. B-4483-W

No. 2-B-4483-W

Ceiling-mounted units are recommended for rooms with low or medium height ceilings.

Ceiling units can be utilized individually or in long continuous runs.

When units are to be interconnected, knockouts may be removed from end caps for wireway. Before deciding which type of Beacon to order for any installation, consult our lighting specialist in your territory.

The four-foot suspension type is excellent for lighting rooms of average size and blends with all tastefully decorated interiors. Twist-type sockets are provided so that lamps cannot become dislodged.

Wireway cover is held in place by four screws for easy accessibility.

Lamps can be replaced from top or bottom without removing glass panels.

Louver section may be removed when cleaning of unit becomes necessary.

**Rad-i-Air Germicidal Equipment**

110-125 Volts, 60 Cycle, A.C.

**U.R.C. Model Nos. 921-15 and 921-30—For Personal Protection**

Approved by Underwriters' Laboratories

No. 921-15

No. 921-30

**All-Purpose Model Nos. 981-15 and 981-30—For Animal and Product Protection**

Approved by Underwriters' Laboratories

No. 981-30

Exposed type to permit wide use of the maximum intensity of the germicidal lamp. Made of heavy gage metal with attractive end plates and Alzak aluminum reflectors.

Has Electrical Testing Laboratories approved ballast, starter, and sockets.

May be installed for either direct or indirect use.

Mounted horizontally or vertically; flush to ceiling or suspended by chains or stems.

Available in low or high power factor.

**Bare Lamp Model No. 931-15—For Protection of Meat and Meat Products**

Used in the walk-in meat box, meat storage locker plants, and similar locations to provide unobstructed ultraviolet irradiation in all directions for suppressing bacterial propagation and meat contamination.

Made of heavy gage metal. Has Electrical Testing Laboratories approved ballast, starter, and sockets.

Available in low and high power factor.

**Conveyor Line Model Nos. 961-15 and 961-30—For Direct or Indirect Product Protection**

Approved by Underwriters' Laboratories

No. 961-30

Designed to combine maximum intensity ultraviolet irradiation with louver control for direct or indirect activation. Made of heavy gage metal with attractive end plates, and Alzak aluminum reflectors. Has Electrical Testing Laboratories approved ballast, starter, and sockets.

All models available in other standard voltage, 60-cycle, at no additional cost. Specify voltage on order. Also available for 50-cycle operation, add \$2.20 to prices. Write for information on units operating on higher voltages or direct current.

Designed by the Utilities Research Commission to sanitize the air in schools, stores, offices, hospitals, factories, and any other place where humans congregate indoors.

Made of heavy gage steel with bright chrome trim and Alzak aluminum reflectors.

Mounted horizontally flush to wall. May also be hung by stem suspension.

Has high power factor.

Furnished with 10-foot cord and plug. Knockouts are provided for mounting direct to electric outlet.

Finished in baked cream enamel.

## Benjamin RLM Lite-Line 40 Continuous Line Lighting Systems

For Two and Three Fluorescent Lamps

Sliding Hanger Type

With Closed-End and Open-End Reflector

110-125 Volts, 60 Cycles

220-250 Volts, 60 Cycles

Features the double reflector channel unit which is made of heavy gage steel and is joined end to end to form a continuous line by the use of a rigid, steel coupling.

The single reflector steel channel is usually used to fill out at the ends of lines.

Ends of channel are closed by a steel cap.

A complete line of sliding hangers is available to meet every mounting condition.

Convenient  $\frac{1}{2}$  and  $\frac{3}{4}$ -inch knockouts are also furnished in the top of the channel.

Springlox lamp holders hold the lamps securely and speed lamping and relamping.

Reflector is attached or removed by a quarter turn of two, hand-operated, adjustable Lok-Latch reflector fasteners. Channel is wired and has 6-inch leads.

Reflector is porcelain enameled steel with exterior finished gray and interior finished white.

\*Two-lamp only.

†Can be used independently as an additional means of

mounting where a non-sliding type suspension meets requirements.

**Benjamin RLM Shield-Flo 40 Lighting Units****For Two 40-Watt Fluorescent Lamps**

110-125 Volts, \*60 Cycles, A.C.  
220-250 Volts, \*60 Cycles, A.C.

For industrial and commercial installations.

Identical to Stream-Flo 40 unit except that it has a longitudinal shield between the lamps which provides the same shielding angle on the far lamp as on the near lamp. Has a total overall shielding angle of 27°. Shield is removable from reflector.

Housing is made of steel, contains control equipment, and is provided with brackets for chain suspension. Also provided with ample 1/2 and 3/4-inch knockouts for conduit suspension.

Reflector is closed-end type made of enameling iron finished in porcelain enameled steel. Exterior finish is gray. Interior surfaces are white with a reflection factor of 79 per cent or more. Shield is made of white porcelain enamel steel.

Springlox safety lamp holder speeds lamping and relamping. Simply push one end of lamp into lamp holder and let the spring pressure push the other end into the facing lamp holder. Pressure of the lifetime spring securely locks lamp into position.

A quarter turn of the Lok-Latch reflector fastener quickly attaches or detaches reflector from housing.

Lamp holders are spaced on 5-inch centers.

†Also fits twin-lamp, 13 1/8 inches width, open-end reflector, as supplied on Benjamin "Lite-Line 40" series.

**Benjamin Type II-G Sealed-Flo 48 Dust Tight Lighting Units****For Two and Three 40-Watt 48-Inch Fluorescent Lamps**

110-125 Volts, \*60 Cycles, A.C.  
220-250 Volts, \*60 Cycles, A.C.

Listed by Underwriter's Laboratories, Inc.

For Class II, Groups F and G and Classes III and IV Hazardous Locations

For locations requiring dust or vapor-tight lighting equipment.

The bottom of the one-piece housing is securely sealed by a gasketed, double strength, grade A, clear glass cover, mounted in a metal frame.

Frame is hinged to the housing on one side and is held in contact on the opposite side by five, easily operated clamps.

Housing is porcelain enamel steel, finished in light gray, with a removable porcelain enameled steel plate on the top of which lamp holders and ballast equipment are mounted for easy wiring.

The under side of the plate and sides of housing form the porcelain enameled steel reflector.

Furnished with two cast iron suspension flanges with conduit stops, spaced on 36-inch centers, tapped 1/2-inch standard; 3/4-inch if specified.

Lamps not included.

Available with heat and impact resisting tempered plate clear glass covers at \$20.90 additional. To order, drop CL suffix and substitute TP.

## Benjamin Twin-Flo 40 and Triple-Flo 40 Lighting Units

For Two and Three T-12, 40-Watt 48-Inch Fluorescent Lamps

110-125 Volts, \*60 Cycles, A.C.

220-250 Volts, \*60 Cycles, A.C.

Listed by Underwriters' Laboratories, Inc.

For general and local lighting of industrial and commercial locations.

Housing is made of steel with brackets for chain suspension and ample  $\frac{1}{2}$  and  $\frac{3}{4}$ -inch knockouts. Finished in gray enamel.

Reflector is open-end type made of enameling iron and finished in porcelain enameled steel. Exterior finish is gray; interior surfaces are white with a reflection factor of 79 per cent or more. Twin-lamp reflector is  $50\frac{3}{4}$  inches in length and  $11\frac{1}{2}$  inches in width. Triple-lamp reflector is  $53\frac{3}{4}$  inches in length and  $13\frac{1}{8}$  inches in width.

Springlox safety lamp holder speeds lamping and relamping. Simply push one end of lamp into lamp holder and let the spring pressure push the other end into the facing lamp holder. Pressure of the lifetime spring securely locks lamp into position.

A quarter turn of the Lok-Latch reflector fastener quickly attaches or detaches reflector from housing.

Twin-lamp unit has lamp holders spaced on  $3\frac{1}{2}$ -inch centers. Triple-lamp unit has the two outer lamps spaced on 5-inch centers.

Overall power factor of lamps and auxiliary equipment, 95 per cent.

Lamps are not included.

### Benjamin RLM Stream-Flo 100 Lighting Units

#### For Two 60-Inch 100-Watt Fluorescent Lamps

110-125 Volts, \*60 Cycles, A.C.  
220-250 Volts, \*60 Cycles, A.C.  
Listed by Underwriters' Laboratories, Inc.

No. 60762

Provides high level of illumination for industrial and commercial locations and for all other locations requiring higher mounting and wider spacing.

Reflector is of the closed-end type, without apertures, and has shielding angle of 14°. Easily installed. Reflector is quickly detachable from the housing by removal of lamps and a quarter turn of two Lok-Latch fasteners.

Reflector is made of porcelain enameled steel and is finished light gray outside, white inside.

Housing is finished in gray enamel.

Furnished with two-lamp, 95-100 per cent power factor ballast. Chain brackets furnished for each end of housing.

Rigid conduit suspension is possible by using any of six 1/2-inch conduit size knockouts (two on 53 1/2-inch, two on 36-inch, and two on 19 1/2-inch centers) provided in the housing. Those on 19 1/2-inch centers fit the Benjamin twin stem canopy. Dimensions: Length, 65 3/4 inches; width, 16 inches; height, 8 1/2 inches.

\*50-cycle ballast furnished when specified. Prices upon application.

†Can be furnished with 199 to 216-volt ballast at 220 to 250-volt prices.

Standard type starters regularly furnished. Non-Blinking type starters available at \$.40 additional per lamp. Suffix W to number when ordering if Non-Blinking starter is desired.

### Benjamin RLM Type TX-40 Lighting Units

#### For Two and Three 40-Watt 48-Inch Fluorescent Lamps

110-125 Volts, 60 Cycles, A.C.  
220-250 Volts, 60 Cycles, A.C.  
Listed by Underwriters' Laboratories, Inc.

Suitable for locations with humid and damp atmospheres which cause water to be condensed on top of fixture. Used in textile mills, paper mills, food plants, etc.

Power factor, 95 per cent.

Has a one-piece porcelain enameled steel housing which encloses the control equipment and forms the sides of the reflector.

Control equipment is mounted on a removable porcelain enamel steel plate, which, when placed in position becomes the top of the reflector.

Has two cast iron suspension flange assemblies with conduit stops, spaced on 36-inch centers; tapped 1/2-inch standard, 3/4-inch if specified. One is for conduit stem and the other is for wire entrance.

The outside of the reflector is finished in two coats of porcelain enamel which makes the unit resistant to rust from moisture.

Inner reflecting surface has a ground coat and two coats of white porcelain enamel with a reflection factor of 79 per cent.

No. ZUO-340, Porcelain; Ship. Wt., 31 Pounds each	35.60

### Day-Brite Inspection Lighting Fixtures

#### For One and Two; 15, 20, 30 and 40-Watt Fluorescent Lamps

110 Volts, 60 Cycles, A.C.

Designed for localized lighting where color-matching and daylight quality illumination is required.

Furnished wired and includes sockets, No-Blink type starters and high power factor ballasts for a.c. operation.

Body is made of steel and is finished in baked aluminum gray enamel and has a loop at each end of top for hanging.

Reflector is specular.

## Day-Brite Day-Line Heavy Duty Continuous Industrial Lighting Fixtures

For Two and Three 40-Watt Fluorescent Lamps

For Two 100-Watt Fluorescent Lamps

With Removable Open-End Porcelain Enameled Reflectors

110 Volts, 60 Cycles, A.C.

Continuous industrial fixtures in any length can be made up of the parts illustrated.

Designed for easy application of the various mounting methods shown below.

Furnished wired and include approved type high power factor ballasts, sockets, and No-Blink starters for 110-volt, 60-cycle, a.c. operation.

Channel is die-formed and is finished in baked aluminum gray enamel.

Reflector is open-end and is finished in vitreous porcelain enamel consisting of one ground coat and two white coats inside with one ground coat and one gray coat outside.

Reflection factor, 79 per cent or more.

Lateral shielding angle meets RLM standards.

Reflectors are individually removable and are mounted to channel by two captive wing nuts which have a 2-inch diameter bearing surface assuring rigid, fool-proof fastening.

## Day-Brite Heavy Duty Day-Line Industrial Lighting Units

For Two and Three 40-Watt Fluorescent Lamps

For Two 100-Watt Fluorescent Lamps

110 Volts, 60 Cycles, A.C.

A complete single fluorescent lighting unit.

Truss-like construction of the die-formed steel fixture hood provides increased strength that supports socket saddle and ballast, assuring rigid alignment of all parts.

Fixture hood is arranged for chain, pipe, or steel hangers. Cord outlets and knockouts are provided for electrical connections.

Furnished wired and includes approved high power factor ballast, sockets, and No-Blink type starters for 60-cycle a.c. operation. Instant-starting ballast can be furnished on special order for two-lamp, 40-watt, 110-volt fixture only.

Sockets, lamp starters, and ballast are fastened in the hood, leaving the reflector free for complete removal for servicing and cleaning operations.

The reflector is fastened to the hood by two captive wing-nuts having a 2-inch diameter bearing surface.

The lamp starters are located behind the sockets and are easily replaced without disturbing the lamps.

Hood is finished in baked aluminum gray enamel.

Open end reflector is finished in vitreous porcelain enamel. Reflection factor, 79 per cent or more.

## No. 9988 Day-Brite Hydee Fixture Hangers

For All Chain Suspension Fixtures

Underwriters' Approved

A complete, self-contained fitting for speedy, inexpensive installation. Fastens to ears of 4 and 3 1/4-inch outlet box or open-type plaster ring. Includes receptacle for two-prong plug, knockout for switch, two 5-foot chains with S hooks and cord clips.

Width, 4 1/8 inches; length, 9 1/4 inches.

No. 9988.....each \$1.82

## No. 2060 Mitchell Portable Industrial Lighting Fixtures

For Two 20-Watt Fluorescent Lamps

110-125 Volts, 60 Cycles A.C.

For high intensity, localized lighting of production, assembly, and inspection lines, over benches, machines, and tables. RLM approved for chain suspension, for rigid mounting or for continuous row mounting.

Reflector is made of Lumenite, a durable moisture-resistant composition. Wireway is made of steel with knockouts at both ends.

Has FS-2 starter mounted on side of wireway; ballasts; and sockets.

Furnished with 6-foot cord and plug. Knockouts are also provided for rigid (conduit) mounting, singly, in twin groups, or continuous rows. Chains of 8 feet in length are also available.

Dimensions: length, 24 inches; width, 9 1/2 inches; height, 4 1/2 inches.

Individually packed. Shipping weight, 8 pounds.

No. 2060.....each \$10.95

## No. 2080-S Mitchell Industrial Lighting Fixtures

With Open-End Steel Reflector  
For Two 40-Watt Fluorescent Lamps

110-125 Volts, 60 Cycle A.C.

Approved by Underwriters' Laboratories

Approved by Electrical Testing Laboratories for individual or continuous row lighting.

Operates at a low ambient temperature.

Stroboscopic corrected.

Power factor over 90 per cent.

Made of steel.

Has approved tulamp ballasts, starter, and sockets.

Dimensions: length, 48 inches; width, 13 $\frac{3}{4}$  inches; height, 7 $\frac{3}{8}$  inches.

Baked enamel finish.

Accessories for hanging at extra cost.

No. 2080-S.....each \$21.50

## Mitchell Industrial Lighting Fixtures

For Two 40-Watt Fluorescent Lamps

110-125 Volts, 60 Cycles A.C.

Approved by Underwriters' Laboratories

Approved by Electrical Testing Laboratories.

Has tulamp ballast, sockets, and starters.

Stroboscopic tested.

Power factor over 90 per cent.

Wireway channel and reflector are made of steel.

Dimensions: length, 50 inches; width, 13 $\frac{3}{4}$  inches; height, 7 inches.

No. 2082 has baked enamel finish.

No. 2084 has porcelain enamel finish.

Accessories are available at extra cost.

No. 2082, Baked Enamel.....each \$22.95

No. 2084, Porcelain Enamel.....each 23.95

## Smithcraft Economy Series Industrial Lighting Fixtures

For Two or Three 40-Watt Fluorescent Lamps

For Two 100-Watt Fluorescent Lamps

110-125 Volts or 220-250 Volts, 60 Cycles, A.C.

Approved by Underwriters' Laboratories, Inc.

Has minimum light output of 85 per cent.

Completely wired with E.T.L. approved high power factor ballasts, lamp sockets, and FS4 or FS64 starters.

Lead wires approximately 12 inches outside housing is standard.

Housing is die-formed, sturdy and light in weight.

Knockouts for rod or conduit suspension are on 24-inch centers.

Reflector is finished in baked white enamel inside, French gray outside.

No.	Each	No. of Lamps	Watts	DIMENSIONS, INCHES			Ship. Wt.
				Length	Width	Depth

LS2-100	44.22	2	100	63	15	6½	37

Double 40-watt fixtures available with lightning start ballasts. If desired add prefix Q to number when ordering and add 3 pounds to weight.

## Smithcraft Individual Industrial Lighting Fixtures

For Two or Three 40-Watt Fluorescent Lamps

For Two 100-Watt Fluorescent Lamps

110-125 Volts or 220-250 Volts, 60 Cycles, A.C.

Approved by Underwriters' Laboratories, Inc.

Has minimum light output of 85 per cent.

Completely wired with E.T.L. approved high power factor ballasts, lamp sockets, and FS4 starters.

Lead wires approximately 12 inches outside housing is standard.

Girder-like housing, made of steel, provides for every hanging and mounting requirement.

Knockouts for rod or conduit suspension are on 24-inch centers.

Furnished with the single turn release, which consists of two wing nuts that release reflector while the captive hood bolts and chains suspend the reflector for easy servicing.

Reflector is finished in white baked enamel inside, French gray outside.

## Wheeler 7000 Heavy Duty Line RLM Fluorescent Units

With Porcelain Enameled Steel Reflectors

Approved by Underwriters' Laboratories

Complete Single Length Fixtures

Two 40-Watt Open End Fixture

Wheeler 7000 line all steel fluorescent fixtures are designed and manufactured to conform with specifications and standards of RLM Standards Institute.

**Features.** Reflectors are demountable from wiring channels by a simple movement of the specially designed supporting plates. These plates are operated by loosening two thumb screws and sliding them towards center of reflectors.

**Reflectors.** Heavy gage, porcelain enameled, steel reflectors are available in either open end or closed end style. All reflecting surfaces white, and outside finish grey.

**Wiring Channel.** Steel wiring channel is rigidly constructed to totally enclose all operating equipment. The specially grooved channel formation permits the use of fully adjustable hanger suspension fittings which can be clamped in position at any point desired. Starter switches are located on the side of the channel. Channel is finished in grey paint to blend with reflectors.

**Suspension.** Provisions are made in the specially grooved channel formation for chain suspension and the top of the channel is provided with  $\frac{1}{2}$ -inch conduit size knockouts for conduit suspension. Knockouts on 40-watt units are spaced 24, 36 and 44  $\frac{1}{16}$ -inches on centers. Holes to receive chain hangers are spaced 44  $\frac{1}{16}$ -inches on centers. Knockouts on 100-watt units are spaced 24, 36 and 57  $\frac{1}{16}$ -inches on centers.

**Ballast Equipment.** All fixtures are supplied with the latest type of high power factor ballast equipment, starter switches and are supplied wired.

## Series II Wheeler Dust-Tight Lighting Units

For Two and Three 40-Watt Fluorescent Lamps

Vaportight

Approved by Underwriters' Laboratories  
For Class II, (Group G and F), III, and IV Locations

With Hinged Dust-Tight Glass Cover Open

Hinged dust-tight glass cover is readily opened for access to lamps or starter switches by releasing toggle latches. Three types of glass are available:  $\frac{3}{16}$ -inch double thick plain clear glass;  $\frac{1}{4}$ -inch water white plate glass; and  $\frac{1}{4}$ -inch tempered, clear safety plate glass.

All units are supplied complete with high power factor ballast equipment employing separate and renewable starter switches. A starting compensator is included.

Made for use in food plants, foundries, and similar locations where it is necessary to protect lamps, sockets and reflecting surfaces from moisture, dust, smoke and vapors.

The entire outer body of the reflector, including its closed ends, is enameled in one piece.

The mouth of the reflector has a recessed flange to receive the hinged glass cover which seats against cushioning gaskets.

Fixtures are furnished wired, with pigtailed left for connecting to branch circuit.

Two chain hangers are connected from hood of unit to wiring channel to prevent channel from dropping to floor after holding screws located in bottom of channel are released.

Suspension fittings: units are furnished with two flat flanges, spaced on 36-inch centers, tapped  $\frac{1}{2}$  inch standard,  $\frac{3}{4}$  inch if specified.

Fixture dimensions: length, 53 inches; width, 14 $\frac{3}{4}$  inches; depth, 7 inches.

Reflectors are porcelain enameled, gray outside, white inside.

Standard package, 1.

Prices do not include lamps.

Conduit is not furnished.

### Tapped for $\frac{1}{2}$ -Inch Conduit

Appleton EFU Explosion-Proof Fluorescent Fixtures and Accessories

For Two 40-Watt, 48-Inch T-12 Fluorescent Lamps  
Class 1, Groups C and D—Class 11, Groups E, F, and G  
Listed as Standard by Underwriters' Laboratories

Modern lighting for hazardous locations. Hospital operating rooms, volatile fuel and chemical refineries, powder manufacture and shell loading, flour and grain mills are a few of the many locations where fluorescent lighting may now be safely applied.

The advantages of fluorescent lighting include new working comfort due to low brightness and lack of glare, high efficiency when compared with incandescent lamps of equal wattage, and safety of operation in explosive atmospheres due chiefly to cooler operating temperatures.

These fixtures are lightweight units designed to afford every convenience in making simple, quick lamp renewals and maintenance. No external seals are necessary as all seals and internal wiring are completed in manufacture. Line connections are made to terminal block in junction chamber.

Standard equipment includes the following:

High-power-factor two-lamp ballast, necessary auxiliary equipment, pyrex external glass tubes and two-piece, metallic reflector. Reflector has two coats of baked white enamel and surfaces are chip-proof, washable, and retain an unusually high reflection factor.

To facilitate mounting, the use of Appleton Type UNY Explosion-proof Union Connectors in either or both end castings is recommended. The ceiling junction may be of the GRU series of flanged Unilets with a suspended fixture canopy. This simplifies pulling of wires on continuous line runs.

Overall length, 52 $\frac{3}{4}$  inches, overall width, 15 inches, overall height, 8 $\frac{3}{4}$  inches, mounting centers, 46 $\frac{5}{8}$  inches, tube centers, 5 inches.

Type EVF Industrial Lighting Fixture Condulets

Schedule CE

For Two 40-Watt and T-8 Fluorescent Lamps  
Explosion-Proof and Dust-Tight

Class I, Groups C and D Class II, Groups E, F, and G; and Class III

Can be mounted end to end. It is unnecessary to leave excessive space between fixtures for relamping, which makes possible continuous and uniform illumination.

Relamping is quick and easy. No special tools are required.

Ballast housing is unobstructed and readily accessible. This arrangement also results in a cool operating temperature.

Reflectors are easily removable and are replaced without the use of tools.

It is not necessary to raise and connect both ends simultaneously, thus simplifying installation.

\*Furnished with enameled reflector, standard ballast, and starter.

## Dazor Floating Lamps

110 Volts

May be raised, lowered, pushed, pulled, turned, tilted, or swung completely around at a mere touch, and it stays put without any further adjustment or locking. Arms are scientifically counter-balanced in all positions by a spring.

**Bracket Model.** Screws to underside of drawing board permitting use of T-square on upper edge of board. Auxiliary installed beneath spring mechanism.

**Universal Model.** Clamps or screws to horizontal, sloping, or vertical surfaces. For desks, drawing boards, tables, benches, business and industrial machines. Auxiliary installed in housing beneath spring mechanism.

**Pedestal Model.** Portable floor type. Suitable for shops, offices, studios, and homes. May be had in white baked enamel finish. Auxiliary in base.

**Desk Model.** Portable. Requires no screws or clamps. Has heavily weighted base. Auxiliary is installed in the base.

**Standard Finish.** Brown baked enamel over Bonderizing. Inner surfaces of reflectors are white baked enamel. Pedestal model available in white baked enamel.

**Reflectors.** Fluorescent: 18¾ inches long for 15-watt tubes; 9¾ inches long for 6-watt tubes. Incandescent: available in two sizes, 6½ and 5½ inches.

**Standard Packing.** Universal and Bracket Models—both Fluorescent and Incandescent: 1 to a carton, 6 cartons to a case. Pedestal Model—both Fluorescent and Incandescent: 1 to a case. Desk Model—Fluorescent: 1 to a carton, 2 or 3 to a shipping case.

Finish: chromium.

Individually packed.

No. M-412.....each \$6.55

## Graybar Silvray Lighting Fixtures

## Indirect Luminaires for Use with Silvered and Semi-Silvered Bowl Lamps

Designed specifically for use with lamps of the silvered or semi-silvered bowl types, which utilize the sealed beam principle.

Silvered bowl lamps eliminate the need for separate reflectors, and have a wide distribution characteristic.

The design is modern and graceful due to the narrow cross-section of all luminaires. This advantage in design is possible because the bowl of the lamp protrudes through the center of the fixture and is made part of the fixture design.

As a result, uniform ceiling brightness is obtained without spottiness or high brightness directly above the fixture.

Features simple relamping, inherent high lighting efficiency, and a light output as high as 90 per cent.

Efficiency is maintained as dust and accumulations in the fixture have no effect on the output of light.

Conversion rings are available to accommodate different sizes of silvered bowl lamps to be used in the same fixture without changing the fixture itself.

Made of heavy gage metal or of metal and plastic combinations and triple-plated over a base copper coat to maintain the permanence of the finish.

Specially prepared heat-resisting enamels are used on units other than those with metallic finishes.

Correctly designed baffles are used to provide complete shielding of the lamp neck.

## Commercial Line

No. 1500 ConEd

Embodies the concentric ring principle to provide effective lamp shielding and light output as high as 86.5 per cent. The vertical plane of rings permits reflected ceiling light to reach the work area.

Available in the three ring construction shown above for use with 300 and 500-watt lamps.

The same design, in two ring construction, is adapted for use with 200-watt lamps.

Also available with four ring construction for use with 750 and 1000-watt lamps.

Made of Steel, spot-welded for rigidity.

Body and canopy is finished in flat white enamel.

Husks are finished in aluminum.

No. 1500-S ConEd

Made of steel and spot-welded for rigidity.

Three concentric rings provide complete shielding of the lamp. Has totally direct illumination with a high light output of 86.5 per cent. No. 1500-S/2 has two concentric rings; No. 1500-S/10 has four concentric rings.

When a semi-silvered bowl is used, the wide cone of direct downward light builds up illumination of merchandise on counters, tables, and cases. Vertical plane of rings prevents collection of dust, insects, etc. Body and canopy are finished in flat white enamel and husks are finished in aluminum.

No. 1500-S is furnished with a stem suspension to permit its use in applications that are not suited to close-to-ceiling fixtures.

No.	1500-S/2	1500-S	1500-S/10

## Graybar Silvray Lighting Fixtures Commercial Line

No. 207—Pinnacle

For areas such as accounting and clerical offices, and drafting and school rooms where the efficiency of the lighting system is the primary consideration. ETL output 91 per cent.

Made of triple-plated copperized, heavy gage steel.

Furnished with a deep canopy suited for use with levolver switch. Standard finish is French grey enamel with black beaded edge and chrome bulb ring.

No.	Each	Silvered Bowl Wattage	Suspension Length Inches	Diam. Inches
207	\$21.60	300 or 500	26	20
207-20	25.30	750 or 1000	36	20

No. 210—Plasticon

Modern lighting favors the use of translucent plastic because it combines the best features of glass and metal.

This unit furnishes totally indirect illumination but avoids the blind spot of opaque metal units.

Has an output of 89.5 per cent (E.T.L.).

The bowl is protected against warping or deterioration by a series of chrome-and-aluminum concentric rings which separate it from the lamp.

Deep canopy accommodates a pull switch.

Suspension finished in triple-plated cadmium.

No.	Each	Silvered Bowl Wattage	Suspension Length Inches	Diam. Inches
210PL	\$23.60	300 or 500	26	18
210PL	44.30	750 or 1000	36	25

No. 207PL—Liteking

A highly efficient indirect unit with a shallow bowl of modern plastic which is lighted to a pleasing intensity by the silvered bowl lamp with which it is designed to be used.

Output (E.T.L.) 89.5 per cent.

Shallow bowl lighted to a maximum brightness of only 0.3 per square inch.

Lamp neck is fully concealed by shield which rests on bowl supports.

Attractive, plated metal rings separate the bowl from the lamp. Relamps from below without the need to remove bowl or handle the fixture.

Furnished with deep canopy to accommodate switch.

No.	Each	Silvered Bowl Wattage	Suspension Length Inches	Diam. Inches
207PL	\$23.60	300 or 500	31	18

No. 208—Crusader

An all-metal indirect unit of high efficiency. The rolled-edge treatment of the triple-plated solid steel bowl is designed to create an appearance of dense glass.

Standard finish is oyster white enamel. Also available in metallic plated bronze or cadmium.

Chrome-plated bulb ring and deep canopy are standard.

Self-aligning swivel in stem assures straight hanging.

Special bayonet assembly permits quick attachment or removal of bowl from stem.

No.	Each	Silvered Bowl Wattage	Suspension Length Inches	Diam. Inches
208-I.B.T.	\$22.40	300 or 500	31	20

## Wakefield Screwless 1000 Line Hangers and Graybar Globes

Hangers and Globes Must Be Ordered Separately

No. 1060AT, Hanger Only  
No. 8820, Globe Only

No. 1061AT, Hanger Only  
No. 6620, Globe Only

Hanger is made of heavy gage steel with plated statuary bronze finish.

Canopy measures 5 inches on hanger type and 6 inches on ceiling units.

Holder is screwless toggle type.

Hangers and globes must be ordered separately.

No. 1064AT, Hanger Only  
No. 9920, Globe Only

## Graybar Semi-Indirect Lighting Globes

## Series No. 33

No. 3330, Plain

Made of clear crystal glass. The lower half is coated on the outside with a ceramic enamel which redirects the downward light. The upper half is etched on the inside for better diffusion.

Furnished in plain or in D-5 decorative styles; specify when ordering.

No.	Each	Fitter Inches	Diam. Inches	Depth Inches	Recommended Wattage	Estimated Std. Wt. Lb. Pkg. per Pkg.
3375	\$3.00	4	9	6 1/4	75	8 22

3350	12.30	†6 or 8	18	12	500	1 13

## Series No. 77

Made of cased glass of dual opacity with light density top for diffusion and heavy density bottom for reflection. One-piece construction with two-layer diffusing alabaster top and three-layer alabaster reflecting bottom. Thus approximately two-thirds of the light is directed upward and softly diffused, without ceiling shadows, over a wide area. The remaining one-third downward transmitted light is of low brightness, free from glare.

Furnished in plain or in D-452 decorative styles; specify when ordering.

Also furnished with ground neck (neckless) for use with G type fixture only. When ordering, specify 1/2 after number—i.e., 7730 1/2.

\*The 4-inch size is standard; 6-inch size supplied on request only. †Specify either 6 or 8-inch size when ordering.

## Graybar Miscellaneous Glassware

These shades are designed for use with some of the wall brackets and ceiling fixtures. They also can be used as replacements with fixtures of other makes that have standard fittings.

Made of a single layer homogeneous opal white glass of density carefully selected for diffusing qualities. This glass is light in weight and warm in color providing a more refined appearance than ordinary white commercial glass.

## Alabax Porcelain Lighting Fixtures

(Listed by the Underwriters' Laboratories)

Fixtures will not tarnish, rust, stain or change color. Easy to clean—soap and water restore original luster.

An unusual degree of protection is afforded because porcelain is a complete insulator.

Fixtures with pull control are protected against damage by a snub, which takes the strain of unusual or unnecessary

pulling or abuse. Chain or cord can be broken without damage to pull mechanism.

Supplied in white or ivory glaze. Colors in glazes cannot change. They are permanently fired in at a temperature of approximately 2300°F. Glaze becomes an integral part of fixture, and is not subject to peeling or color change.

## Curtis Incandescent Recessed Lighting Units

Maximum allowable spacing for good general lighting is approximately one and one half times distance of unit to working plane for good distribution of light with units listed.

Concentrating reflector units, however, provide a spot-

light effect immediately under the unit and are not suitable for general lighting.

Satin Gray finish on louver and inside of housing. White Fluracite finish on hinged rims.

### Metal Housed Recessing Units

\*For General Lighting

Bears Underwriters' Recessing Label

Fitted with "X-Ray" silver mirror reflectors, for maximum efficiency, and a hinged rim which holds the louvers and cover glasses.

Can be permanently set into plaster ceilings without plaster rings, but plaster rings should be ordered separately where housing must be removable for access to wiring.

Shallow types have aluminum interior finish and two sockets arranged to hold lamps in a horizontal position.

Round

#### Large Round Deep Units—For 300-Watt Medium Base Lamps

Space required for recessing, 15 1/4 inches.

Dimensions: housing diameter, 14 1/2 inches; lens diameter, 14 inches; louver diameter, 14 inches; rim, 17 5/8 inches overall.

No. 2309, with Crackled Glass Lens Only.....each \$25.50

No. 2329, with Lens and Concentric Louver....each 29.60

If plaster ring is required, order No. 14038.

#### Large Round Shallow Units—For Two 150-Watt Lamps

Space required for recessing, 6 inches.

Dimensions: housing diameter, 14 1/2 inches; lens diameter, 14 inches; louver diameter, 14 inches; rim, 17 5/8 inches overall.

No. 2302, with Sanded Glass Lens Only.....each \$15.25

No. 2322, with Lens and Concentric Louver....each 20.85

If plaster ring is required, order No. 14038.

#### Small Round Deep Units—For 200 or 300-Watt Medium Base Lamp

Space required for recessing, 12 1/2 inches.

Dimensions: housing diameter, 11 3/8 inches; lens diameter, 10 inches; louver diameter, 10 inches; rim 12 5/8 inches overall.

\*No. 2306, with Sanded Glass Lens Only.....each \$17.75

\*No. 2315, with Concentric Louver Only.....each 20.65

\*No. 2326, with Lens and Concentric Louver....each 22.00

If plaster ring is required, order No. 14037.

\*If housed units are wanted with concentrating type reflectors, use the following Nos. in place of Nos. 2306, 2315, and 2326 respectively (available in small round deep housings only): No. 2304, each \$18.60; No. 2314, each \$20.65; No. 2324, each \$22.65.

Square

#### Small Round Shallow Units—For Two 100-Watt Lamps

Space required for recessing, 6 inches.

Dimensions: housing diameter, 11 3/8 inches; lens diameter, 10 inches; louver diameter, 10 inches; rim, 12 5/8 inches overall.

No. 2301, with Sanded Glass Lens Only.....each \$10.15

No. 2321, with Lens and Concentric Louver.....each 14.60

If plaster ring is required, order No. 14037.

#### Square Deep Units—For 200 or 300-Watt Medium Base Lamp

Space required for recessing, 13 1/4 inches.

Dimensions: housing, 10 7/8 inches; square; lens, 10 inches; square; louver, 10 inches, square; rim, 13 1/4 inches, square.

No. 2455, with Etched Glass Lens Only.....each \$24.10

No. 2495, with Lens and Pattern Louver.....each 27.65

#### Square Shallow Units—For Two 100-Watt Lamps

Space required for recessing, 6 inches.

Dimensions: housing, 10 7/8 inches, square; lens, 10 inches, square; louver, 10 inches, square; rim, 13 1/4 inches, square.

No. 2451, with Etched Glass Lens Only.....each \$16.90

No. 2491, with Lens and Pattern Louver.....each 20.60

If plaster ring is required, order No. 14042.

### Hinged Rim Recessing Units

Without Housing

Furnished with "X-Ray" reflector, holder socket and shell, mounting collar and hinged rim with cover glass, concentric louver, or guard.

Plaster ground rings are not furnished but should be ordered separately when units are to be set into a plaster ceiling. May be serviced either from above or below.

## Curtis "X-Ray" Silver Mirror Show Window Reflectors

## Recessing

No. 420  
"Master" ModelNo. 500  
"King" Model

Made of crystal glass mirrored with pure silver.

**No. 420** is semi-concentrating for shallow windows using 100 or 150-watt incandescent lamp. Adjustable holder included. Louver No. 12420 (U-Type) is furnished at extra cost. Dimensions: diameter,  $8\frac{5}{8}$  inches; height with holder,  $7\frac{1}{16}$  inches.

**No. 500** is an angle type for deep windows using 150, 200, or 300-watt medium base incandescent lamp. Adjustable holder is included. Dimensions: width, 10 inches; depth, front to back,  $10\frac{1}{2}$  inches. Height with holder, 10 inches.

**No. 530** is semi-concentrating for shallow windows using 150, 200 or 300-watt medium base incandescent lamp. Adjustable holder is included. Louver No. 12531 (U-Type) is furnished at additional cost of \$4.25 each. Dimensions: diameter,  $9\frac{3}{4}$  inches. Height, with holder,  $9\frac{1}{16}$  inches.

**No. 1010** is semi-concentrating for very large windows using 300 or 500-watt mogul base incandescent lamp. Holder included is No. 10010,  $3\frac{3}{4}$ -inch which fits "X-Ray" mogul base sockets only. Socket No. 8300-B is included and has a  $\frac{1}{2}$ -inch back outlet. Dimensions: diameter, 13 inches. Height, with holder and socket,  $12\frac{3}{8}$  inches.

**Installation:** Nos. 420, 500, and 530 are usually installed on CurtiStrip using No. 5 socket or on outlet box by means of box cover receptacle unit; No. 1010 is installed directly on conduit or on a  $\frac{1}{2}$ -inch or  $\frac{3}{8}$ -inch nipple. May be recessed with finishing flanges.

Finishing Flange				Plaster Ring			
Reflector No.	Each	No.	Each	Width of Flange Inches	Plaster Ring Dimensions, INCHES	Min.	*X

## Wheeler Flush Lighting Units

No. 1860, Single Gang Unit

Designed to set into ceiling or wall so that front will be flush with finished plaster. Box portion is equipped with adjustable flanges on outside so that box can be fastened into position during construction of building before it is

plastered. Each box is equipped with compartment in which all wiring can be done.

Door and trim constructed of 12-gage steel.

Door is cut out to take standard size lens and is provided with a means of holding lens in place.

Boxes and trims finished aluminum bronze inside and out.

Box portion is constructed of 16-gage steel welded together at corners.

No.	Each	Lamp Position	Lamp Watts	Lens Size In.	Trim In.	Box, INCHES	Width	Depth
1860	\$23.00	Vertical	25-60	$6\frac{1}{2}$	$9\frac{3}{4}$	$8\frac{1}{2}$	8	
1861	17.00	Horizontal	25-60	$6\frac{1}{2}$	$9\frac{3}{4}$	$8\frac{1}{2}$	$4\frac{1}{2}$	
1862	24.00	Vertical	75-150	$8\frac{1}{2}$	12	$10\frac{1}{2}$	$11\frac{1}{2}$	
1863	20.00	Horizontal	75-150	$8\frac{1}{2}$	12	$10\frac{1}{2}$	$5\frac{1}{2}$	
1864	31.00	Vertical	200-300	12	$15\frac{1}{2}$	$14\frac{1}{4}$	13	
1865	27.00	Horizontal	200-300	12	$15\frac{1}{2}$	$14\frac{1}{4}$	8	

If lens is required for greater diffusion, suffix No. with letters VFD and add \$1.00 to price.

Special chromium-plated reflector for use in any of above boxes, \$5.00 extra for  $6\frac{1}{2}$  and  $8\frac{1}{2}$ -inch sizes; \$7.00 for 12-inch size. Wire guard for 12-inch plate only, \$3.00 extra.

## Wheeler Hospital Night Lights

No. 1877 Louver Type

No. 1878 Visor Type

No. 1879 Lens-In-Door Type

**Louver type night light** is usually mounted eighteen inches or two feet above the floor. Louvers obstruct the light from shining in patients eyes. Box is 14 gage steel finished aluminum bronze inside and out. Face plate is cast aluminum finished in baked white enamel. A clear glass panel behind the louvers prevents dust from collecting in the box.

**Visor type night light** furnishes direct or indirect light over the bed or table in sick rooms. Visor swings up or down. Box is made of 14 gage steel painted aluminum bronze inside and out. Face plate is cast aluminum and is equipped with a clear glass panel over which visor swings. Face plate and visor are finished in baked white enamel.

**Lens-in-door type** is a corridor night light designed to set flush with the finished wall. Usually installed about two feet above the floor. Box is 16 gage steel finished aluminum bronze inside and out. Front consists of door and trim of 12 gage steel finished in baked white enamel. Lens is a diffusing type.

Cat. No.	Each	Watts	FACE OR TRIM (INCHES)	BOX DIMENSIONS, INCHES	Lght	Width	Depth.
1877	\$5.00	25-40	$6\frac{3}{4} \times 3\frac{3}{4}$	6	3	$3\frac{1}{4}$	
*1878	7.00	25-40	$6\frac{3}{4} \times 3\frac{3}{4}$	6	3	$3\frac{1}{4}$	
1879	15.00	25-100	$9\frac{3}{4} \times 9\frac{3}{4}$	$8\frac{1}{2}$	$8\frac{1}{2}$	$3\frac{1}{4}$	

\*Can be furnished with toggle switch at an increase of \$2.00.

## Wheeler Exit Signs

No. 2331-SHF

Wheeler exit signs are attractive in appearance, and fully meet the requirements of the most modern theatres, auditoriums and public buildings. They are available in a variety of designs, single-faced, double-faced and tri-angular, with five, six or eight-inch letters to comply with state laws.

All Wheeler exit signs are made of heavy gage sheet iron, finished aluminum bronze inside and dark bronze outside; signs can be finished outside in any color to match woodwork or wall finish, if desired and so specified on order. Prices on application.

All exit signs are supplied with two receptacles, unwired, for use with 25-40 watt lamps.

**Wheeler stenciled exit signs** are most attractive and efficient. The letters are stenciled Old Roman and are backed with imported ruby glass, which is sandblasted on the back to give even, diffused light. When the sign is lighted, only the red letters "Exit" can be seen, with no undesirable light around the letters.

**Flush type exit signs** with hinged fronts are heavier and more rugged than the standard signs. Hinged door permits quick and easy access to lamps and sockets.

**Triangular exit signs** are supplied with the word "Exit" on two sides. This type of sign is used in corridors and can be seen from either end of the corridor.

## Standard Single-Faced Exit Signs

## Stenciled Letters Backed with Imported Ruby Glass

## Kliegl Disappearing Type Footlights

When not in use, this type is closed down flush with stage floor. Wired for three colors. Automatic mercury on and off circuit switches. Solid kiln-dried oak flooring. Malleable iron cross brackets, positive latches. Terminal blocks for feeder connections.

Furnished in standard five-foot lengths. Completely assembled.

## No. 829 Open Trough Style

For use with colored lamps.

With continuous reflector, sprayed white.

Single row receptacles, continuous flooring, 5-foot sections, 15 outlets, 60-100 watts.

No. 829.....each \$55.00

## No. 832 Individual Reflector Style

For use with clear or inside frosted lamps.

Has single row Alzak aluminum reflectors and glass color-roundels.

Hinged mounting, continuous flooring, 5-foot section, 12 outlets, 100 watts.

No. 832.....each \$72.00

## No. 610 Kliegl Individual Reflector and Roundel Borderlights

Wired as specified, for three or more colors. Furnished with splice box, scenery guards, and chain hangers.

Any continuous length, or in sections.

For clear or inside frosted lamps. Alzak aluminum individual reflectors. Heat-resisting glass color roundels, hinged-ring roundel holders. Porcelain screw-base receptacles, 100 or 150-watt outlets as specified, 6 inches on centers.

No. 610.....per foot \$13.00

## Kliegl Stage-Floor Type Pockets

No. 354

Set in floor flush with surface. Has hinged self-closing cover notched for passage of cable. Fitted with heavy duty plug outlets.

Listed by Underwriters' Laboratories.

Furnished complete with two-wire plugs.

## Kliegl Aisle, Step, and Corridor Lights

Casts subdued light downward on steps and aiseways, or diffused light in corridors.

### No. 675 Aisle Spot Lights

For mounting on side of end seats adjoining aisleway. Cast aluminum housing with control lens and receptacle for 10-watt, S14 lamp.

Width, 3 inches; height, 6 inches; and depth, 2 3/4 inches.

No. 675.....each \$4.50

### No. 2677 Step Lights

For stairways, mounted flush in riser. Louvered openings direct light to tread. Removable cast aluminum front.

For 40-watt, medium screw-base lamp.

Width, 8 inches; height, 4 1/8 inches; and depth, 3 1/2 inches.

No. 2677.....each \$5.00

### No. 2666 Aisle Lights

For flush wall mounting. Louvered front directs light to floor. Front is removable.

For 40-watt, medium screw-base lamp.

Width, 4 7/8 inches; height, 8 1/4 inches; and depth, 3 1/2 inches.

No. 2666.....each \$5.00

### No. 2681 Corridor Lights

For flush wall mounting.

Cast bronze, removable front, wire-glass face.

For 40-watt, medium screw-base lamp.

Width, 4 1/8 inches; height, 8 inches; and depth, 3 1/2 inches.

No. 2681.....each \$8.00

## Kliegl Lighting Fixtures

Prices given below do not include lamps

### Recessed Fresnel-Lens Ceiling Units

Flush inbuilt type which provides high intensity direct illumination. Accommodates standard screw-base general service incandescent filament lamps. Furnished complete with back box, mounting arrangements, wired porcelain receptacle, Alzak aluminum reflector, Fresnel lens with painted risers, and hinged front frame.

No. 22F12

#### Circular Lens Types

No. 22F16, 500-750 Watts, 16-Inch Diam. Lens.....each	50.00

No. 24F12

#### Square Lens Types

Fitted with square shaped Fresnel lens of indicated size. Square hinged front frame. Rectilinear back box.

No. 24F06, 100 Watts, 6-Inch Square Lens.....each	\$22.00
No. 24F08, 150 Watts, 8-Inch Square Lens.....each	26.00
No. 24F12, 200-300 Watts, 12-Inch Square Lens.....each	30.00

### Downlights—Concealed Ceiling Units

Provides high intensity direct illumination. Projects light beam through small hole in ceiling.

No. 2503

#### Fixed Beam Types—Relamped from Above

For general lighting. Gives soft edge beam. Uses standard service lamps. Furnished with ellipsoidal reflector and fixed-focus lens system.

No. 2501, 150-Watt, Medium Screw Base.....each	\$38.00
No. 2503, 200-300-Watt, Medium Screw Base.....each	48.00
No. 2504, 300-500-Watt, Mogul Screw Base.....each	66.00
No. 2505, 750-1000-Watt, Medium Bipost.....each	82.50

#### Adjustable Beam Types—Relamped from Above

For defined lighting and general illumination, either straight down or approximately 45° angular projection.

Sharp or soft edge cut-off. Shape and size of beam can be regulated. Has focusable lens, adjustable framing shutters,

and reflector. Uses concentrated filament type lamps.

No. 2164

No. 2165

Watts	RATING	Volts	No.	*Each	Projection
250-500		115	2164	\$40.00	Straight Down

690	5.50	8	15¾x10

Pigtail wired socket installed, \$1.00 each additional.

No. 711

### No. 711A Outlet Box Types

Made for attachment to standard octagonal 4-inch outlet box in wall.

Includes base plate, medium screw receptacle socket, and red lens with opaque letters.

Finished in brushed brass or statuary bronze.

Has 5-inch diameter; with 2-inch letters on front.

No. 711A.....each \$5.50

## Kliegl Floodlights

### Stage Units

Used from side wings or from overhead on the stage. Provided with slide grooves on front for color frames with gelatine mediums. For P. S. lamps.

### No. 1N Standing Types

Open-box reflector sprayed white; grooves for color frame. Pedestal floor stand, 25-foot cable. For 500-1500 watts.

No. 1N.....each \$31.00

### No. 2N Standing Types

Parabolic boxed Alzak aluminum reflector; grooves for color frame. Pedestal floor stand, 25-foot cable. For 500-1500 watts.

No. 2N.....each \$42.00

### No. 540 Hanging Types

Open-box reflector sprayed white; chain hangers; asbestos leads; grooves for color frame. For 500 watts.

No. 540.....each \$17.00

### No. 546 Hanging Types

Parabolic boxed Alzak aluminum reflector; grooves for color frames; asbestos leads; pipe clamp hanger. For 500 watts.

No. 546.....each \$26.00

No. 546

## Kliegl Color Gelatines

Furnished in all standard colors.  
Conventional Gelatine, 20x24-In. Sheets.....per sheet \$1.16  
Heat and Moisture-Proof Gelatine,  
20x22-In. Sheets.....per sheet .40

## Kliegl Carbon-Arc Spotlights

### General Service Types

No. 11

Standard designs with plano-convex condensing lens. Hand-feed arc spots.

Provided with external focusing and arc feed control. Hand grip for directional movement. Arc ballast resistance on stand. Enclosed line switch. Cable, 25 feet.

No.	Each	9	10	11	18
.....	\$125.00	160.00	195.00	210.00	.....
Rating, amps.	35	50	70	70	.....
Lens Diam., in.	6	6	6	8	.....

### All-Duty Booth Types

High powered, long-range arc spotlights fully equipped with boomerang for rapid color changes.

No. 1695 is a 100-ampere hand feed arc spotlight. Working range, 100 to 150 feet; 8-inch condensing lens. Five color frames in color box on front. Mounted on tubular-steel side-bracket on heavy cast iron base. Asbestos leads and line switch.

No. 1695.....each \$850.00

No. 1701 is a 140-ampere automatic and hand feed arc spotlight. Working range, 100-200 feet; 10-inch condensing lens. Has 6 removable color frames in boomerang in front of spot, keyed color levers on side. Built-in iris and curtain shutters. Movable arc carriage with focusing control hand wheel and position indicator. Motor driven mechanism for automatic arc regulation interconnected with hand controls. Balanced and supported in yoke on massive base. Complete with leads and booster switch.

No. 1701.....each \$1400.00

NOTE. Resistance for connection in series with all-duty arc spots not included in prices listed. When ordered, they are supplied as separate units, without cable, for mounting at some out of the way location.

No. 1701

### HUB Borderlights Individual Reflector Type

No. 21625

Available in any specified length with individual LUME-CROME Reflectors fitted with clear and natural colored convex heat-resisting glass roundels—hinged retaining rings accommodate either roundels or metal frames for gelatin.

Chain hangers. Heavy wire scenery guards. Splice-box with terminal block.

Wired for three or more colors and additional circuits as required for work-lights, spotlights, etc.

No.	21623	21625	21830	21235
Per Foot.....	\$16.90	6.90	9.50	20.80

Ctr. to Ctr. Min. Outlet Spacing in.	4	6	8

### HUB Winch Rigging

For raising or lowering border lights. Consists of wire cables running over ceiling blocks to a winch. Ceiling blocks and winches are furnished in varying capacities according to load.

When ordering, specify type of ceiling (exposed or concealed beams), dimensions of stage, including height and length, and type and weight of border-lights.

No. of Lines in Set	Max. Proscenium Opening, Feet
2	20
3	35
4	45

### HUB Permanent Semi-Flush Footlights

No. 63520

#### Saffred Type

With individual spun reflectors and glass roundels in pivoting retaining rings that also accommodate gelatin frames.

Top is of 1/4-inch steel tread-plate supported on heavy channel brackets, angle iron reinforced. Furnished in any length. Reflector outlets spaced 6 inches on center (minimum).

No.	63520	63620
Per Foot.....	\$6.00	7.95
Lamp Wattage.....	60/100	150

#### Open Type

With individual spun reflectors and glass roundels in pivoting retaining rings that also accommodate gelatin frames. Steel channel wire-way. Tread plate not included. Fur-

nished in any length. Center to center minimum outlet spacing, 6 inches.

No.	61623	61625
Per Foot.....	\$16.25	16.90
Lamp Wattage.....	60/100	150

#### Continuous Reflector Type

With complete housing of galvanized steel and continuous reflector finished in matte white or aluminum bronze.

No.	60004-P	60006-P
Per Foot.....	\$6.80	6.20
Lamp Wattage.....	40/100	40/100
Ctr. to Ctr. Min. Outlet Spacing...in.	4	6

For LUME-CROME or Alzak aluminum reflector, add \$1.95 per foot.

### HUB Disappearing Footlights

Approved by Underwriters' Laboratories

No. 41625

These footlights present practically an unbroken front, project but slightly above stage floor in use, fold flush when not in use, and are locked both open and closed.

Cover and trim of kiln-dried hardwood. Lamp carriage is secured to back of cover.

Furnished in 5-foot sections with Mercury cut-off switches, splice box and flexible steel armored conduit.

Approved by Underwriters' Laboratories, and comply with N.E.C. Standards.

**Type I.**—With individual spun reflectors and pivoting retaining rings for glass roundels or gelatine color frames.

**Type L.**—With continuous LUME-CROME reflector.

**Type P.**—With continuous matte white or Lustralume aluminum lacquer reflector.

## HUB Portable Footlights

No 73523

Available in multiple sections up to 10 feet each, complete with connecting cables and slip connectors, separable connectors or twist-lock couplings; specify when ordering.

## No. 73523 Individual Reflector Type

With individual LUME-CROME reflectors with glass roundels for 60 to 100-watt lamps. Reflector outlets spaced 6-inch on center, minimum.

Width, 10 1/8 inches. Height, 5 3/8 inches.

No. 73523.....per foot \$14.30  
For each connector or feeder cable, add \$4.55.

## Continuous Reflector Type

With continuous reflector for colored bulb lamps. Sockets spaced 4 inches on center, minimum.

No. 70004-P.—Matte white or Lustralume aluminum lacquer reflecting surface. Width, 8 3/4 inches. Height, 3 3/4 inches.

No. 70004-P.....per foot \$7.80  
For each connector or feeder cable, add \$4.55.

No. 70004-L.—With LUME-CROME or Alcoa aluminum reflector lining.

No. 70004-L.....per foot \$9.75  
For each connector or feeder cable, add \$4.55.

## HUB Aisle, Step and Night Lights

No 9950

No 9850

No 9952

No 9955

Made of steel with lacquer sprayed or brass plated finish.  
No. 9950.—Vertical louvered flush wall unit designed to direct all light to floor.

No. 9850.—Mounts directly under arm of aisle chair. Cast housing, diffusing glass.

No. 9952.—A horizontal louvered flush unit with duplex convenience outlet.

No. 9951.—Same as No. 9952, except without convenience outlet.

No. 9955.—A louvered flush unit with LUME-CROME reflector.

All flush units have concealed aligners and can be furnished with clear glass dust panel at \$1.80 additional.

## Semi-Flush Type

Exposed portion has opal glass sides and Controlens in hinged, removable or gravity lift frames.

Recess box dimensions same as flush type shown above, except height is 3 $\frac{3}{8}$  to 5 inches less.

Prices upon request.

\*Elements with one lens provided with removable frame.

## Century Footlights

Approved by Underwriters' Laboratories, Inc.

Disappearing type made in 62-inch sections.

Has kiln dry maple wood cover with individual aluminum alcen finish reflectors. Heat resisting color roundels in red, white and blue. Furnished with mercury on and off switches and a splice box for feed with terminal blocks.

No. 846M, With Twelve 60-Watt Outlets.....each \$79.20  
No. 843M, With Nine 75 to 150-Watt Outlets...each 85.80

## Century Borderlights

Approved by Underwriters' Laboratories, Inc.

Individual Reflector Type

Has aluminum alcen finish reflectors, red, amber, green, white, or blue roundels, chain hangers and splice box.

### Individual Compartment Type

White paint individual compartment type with metal doot frames, chain hangers, and splice box for feed cables.

No.	406 1/2	406
Per Foot.....	\$5.00	5.00
Outlet Centers.....inches	6	8
Wattage.....	100-150	200

## Century Dramalites

Approved by Underwriters' Laboratories, Inc.

Decoratively designed to receive reflector bulbs in 150 and 300-watt R40 and PAR38 sizes. All aluminum finish.

No. 373, Canopy Type..ea.\$12.10

No. 372, Base Type...ea.\$12.10

## Century Lekolites

For 100 to 500 Watts

For 1000 to 2000 Watts

Approved by Underwriters' Laboratories, Inc.

No. 1565

Elliptical spotlites with built-in beam framing shutters, yoke base or clamp, metal cutter frame, heat resisting condensing lens, and asbestos lead.

No. 1565 has one 8x10-inch heat resisting condensing lens, built-in 4-way shutters, elliptical reflector, and is wired for 1000 to 2000 watts.

No. 1591 has two 6x9-inch lenses, 4-way shutters, elliptical reflectors, and is wired for 100 to 500 watts.

Bulbs are not included in price.

No. 1565.....	each \$148.50
No. 1591.....	each 55.00

Iris shutter may be substituted for 4 way shutters at no extra cost.

## Century Fresnelites

For 75 to 5000 Watts

Approved by Underwriters' Laboratories, Inc.

Fresnelens provides soft edged spot and floodlight.

Ideal for stage lighting.

Furnished with spherical reflector, focusing device, yoke (clamp or base), metal color frame, and asbestos lead. Accessories available: tripod base, glass filter, flanges; prices on request.

No.	Each	Lens Diam. In.	Watts
500	\$18.70	6	250-500
*501	66.00	8	1000-1500
*502	93.50	10	2000

Top access only.

Uses prefocus base bulb.

Has built-in framing shutters, objective lens system with two 6x9-inch lenses, and ellipsoidal reflector.

No. 1646. Has 90° angle of projection.

No. 1649. Has 30° to 60° angle of projection.

For 250 or 500-Watt T-12 Bulb

No. 1649

No. 1649.....each \$61.60

## Pittsburgh Permaflexor Recessed Show Window Lighting Units No. E-150 Series

No. E-150-4 Recessed in Ceiling

Provides a broadly distributing reflector with a desirable concentration at center for direct lighting service where a close spacing of lamps is needed for low mounting such as entrance ways and marquees.

Furnished complete with Permaflexor E-150, outlet box cover assembly and hinged ceiling roundel with or without wire guards or hinged concentric louvers.

Lamp sizes: 100-watt A-21 and 150-watt PS-25.

## No. E-230 Series

No. E-230-5 Recessed in Ceiling

Provides a broadly distributing reflector with a desirable center concentration. Used for downlighting in stores, gymnasiums, and below mezzanine floors and other locations with low head room. Equipped with Permaflexor E-230 outlet box cover assembly and hinged ceiling roundel with or without wire guards or hinged concentric louvers.

Lamp sizes: 300-w. PS-35, 200-w. PS-30 or 150-w. PS-25.

## No. E-500 Series

No. E-500-8 Recessed in Ceiling

Used exposed or enclosed in metal housing for industrial and public space illumination. It is recessed in the ceiling, with flush mounting ring and concentric louver, or hinged ceiling roundel. Excellent for use above skylights and for all recessed installations for general lighting.

Lamp Sizes: 500-watt PS-40 or 300-watt PS-35.

## Pittsburgh Permaflexor Floodlight Units No. I-1005 Series

Used in high-bay industrial applications where the lighting equipment is located 25 feet or more above the floor and exceptional light concentration is required.

Available in a metal protective housing for use in industrial plants, power houses, gymnasiums, repair shops, and similar installations.

Also available in concentrated and broad light distribution and wattages ranging from 200 to 1000-watts and for use with 400-watt mercury lamps.

Can be equipped with concentric louvers and various types of protective guards.

Bottom diameter, 16 inches.

## No. I-1005-N Series

Provides support and protection for the Permaflexor without the use of a complete housing.

Incorporates the retaining ring arrangement for lighting interiors, in industrial plants, repair shops, hangers, armories, power plants, and similar installations.

Available in concentrated and broad light distribution; wattages from 150 to 1000-watts and for use with 400-watt mercury lamps. Bottom diameter, 16½ inches.

No.	Each	Std. Pkg.	Wt. Lb.

I-1005-LG	28.90	1	37
I-1005-N	23.60	1	22

## Dual Units

Used for general factory and industrial installations.

The twin hangers support two Permaflexors; one for the incandescent filament lamp and the other for the mercury T-16 lamp. In this manner, a perfect blend of incandescent and mercury is obtainable in desired proportions. Available in 500-watt, 750-watt, and 1000-watt incandescent lamps combined with 400-watt T-60 mercury lamps.

## Benjamin Intensifiers

Listed by Underwriters' Laboratories, Inc.

For supplementary, high intensity illumination of small areas.

Packed 1 in a standard package.

## Medium Base—Adjustable-Focus Projectors

Highly polished Alzak aluminum reflector. Medium base composition socket (No. 6656) has focusing adjustment. Universal adjusting bracket is attached to reflector neck. Two thumb screws lock bracket at any point in a wide range of horizontal and vertical settings.

Bracket tapped for 1/2 inch conduit connection. Reflector interior sealed by dust-tight glass cover with quick-opening latch.

Band is natural aluminum, latch electro-plated. Reflector is green lacquer outside; louver, black.

## Mogul Base—Fixed-Focus Projectors

Highly polished Alzak aluminum reflector. Non-focusing, mogul base porcelain socket, No. 2585.

Universal adjusting bracket encloses wiring; fixture supplied with 10-foot leads of No. 16 B&S gage, asbestos covered stranded fixture wire.

Bracket is tapped 1/2 inch standard, 3/4 inch if specified. Reflector interior is sealed by glass cover with quick-opening latch.

Band is natural aluminum; latch, electro-plated. Reflector is green lacquer outside; louver, dead black.

## Benjamin Explosion-Proof Pendent Lighting Units

Listed as Standard by Underwriters' Laboratories  
Class I, Groups C and D, Hazardous Locations

Less Reflector

Socket is one-piece porcelain, with wiring terminals conveniently located on side. Socket base has permanently formed-on metal gasket.

Packed 1 in a standard package.

A line of enclosing-globe type explosion-proof units to which can be attached any of four standard porcelain enamel steel reflector shapes. Units completely satisfy all Underwriters' requirements for installation in Class I, Groups C and D, hazardous locations—atmospheres having vapors of gasoline, naphtha, petroleum, alcohol, acetone, lacquer solvents, and natural gas.

The pendent hood is cast iron, finished in sprayed aluminum applied over electroplating; tapped 1/2 and 3/4 inch. Removable inspection plug in side of hood gives access to socket terminal screws.

## Benjamin Explosion-Proof Ceiling Lighting Units

Listed by Underwriters' Laboratories as Standard Class I, Groups C and D, Hazardous Locations

Less Reflector

Units completely satisfy all Underwriters' requirements for installation in Class I, Groups C and D, hazardous locations—atmospheres having vapors of gasoline, naphtha, petroleum, alcohol, acetone, lacquer solvents and natural gas. Any of four standard porcelain enamel steel reflector shapes can be attached to units.

The two-piece ceiling hood is cast iron. Consists of an explosion-proof outlet box to which is attached the main body of the hood containing the socket. Hood body is fastened to the box by four screws; has a removable inspection plug and is threaded

to take the fixture body. Sprayed aluminum finish, applied over electro-plating.

Boxes have four 3/8-inch diameter mounting holes and four tapped hubs, with conduit stops; three having plugs.

Packed 1 in a standard package.

## Benjamin Explosion-Proof Junction Boxes

With Hubbed Covers

For Installing Explosion-Proof, Pendent Type Units

Listed as Standard by Underwriters' Laboratories for Class I, Groups C and D

Class II, Group E, F, G and Classes III and IV Hazardous Locations

No. 7350X

Designed for the suspension of pendent type explosion-proof and dust-tight lighting units in hazardous atmosphere locations.

Hubbed cover is attached by four screws, lock washer equipped, which thread into blind tapped holes.

Boxes are supplied with four 3/8-inch diameter mounting holes, equally spaced on a 5 1/2-inch circle.

A single style and size of box, equipped with four tapping hubs equally spaced on a circle, is the basis of all tapping combinations.

Hubs on boxes and covers are provided with built-in conduit stops.

Boxes and covers are cast iron; sprayed aluminum finish, applied over electro-plating.

Cover attaching screws are electro-plated.

Packed 5 in a standard package.

## Type II-G Benjamin Dust-Tight Lighting Units

Listed by Underwriters' Laboratories for Class II, Groups E, F and G and Classes III and IV Hazardous Locations

No. 8500

No. 8506

No. 8513

No. 8517

For locations requiring dust or vapor-tight lighting equipment. Weather and moisture-proof, and due to the protection of the lamp afforded by the glass screw globe, this unit is valuable in food industries where there is a danger of spoilage from breakage of uncovered lamps.

Cast aluminum hoods with removable cast-aluminum cap; sprayed aluminum finish. Acid-resisting porcelain enameled reflector; green outside, reflecting white inside. Medium base, one-piece porcelain socket with side terminals. Standard package is 10.

## Type II-G Benjamin Dust-Tight and Moisture-Proof Units

Listed by Underwriters' Laboratories for Class II, Groups E, F, G and Class III and Class IV, Hazardous Locations

No. 665

No. 657

For installation in Class II, Group G, hazardous locations, where combustible organic dusts are in suspension in the atmosphere and are likely to collect on lighting fixtures in sufficient quantities to cause overheating or explosions; also listed for Class II, Group E atmospheres containing metal dust; and Class II Group F, atmospheres containing carbon black, coal or coal dust. Units are also listed for Classes III and IV locations, where ignitable fibers and materials producing combustible flyings are manufactured, handled or stored.

Has one-piece, weatherproof copper casing; tapped for 1/2-inch conduit. Fitted with removable, one-piece, medium base porcelain socket, which has lamp grip to retard loosening of lamp, and is held in place by a retaining ring that threads into the casing.

Glass globe threads into copper casing seats against an impregnated, asbestos gasket. Natural copper finish.

Guard-type units have removable wire guard which threads onto outside of copper casing. Guards are heavy steel wire, welded and finished bright tin.

Packed 10 in standard package.

## Type M Benjamin Junction Vapolets

### Without Lugs

Listed by Underwriters' Laboratories

A standard, 4 $\frac{1}{2}$ -inch diameter, water tight outlet box; 1 $\frac{1}{2}$  inches deep. Made of cast brass or cast iron.

Plain type cover, cast iron. Rubber gasket makes water tight connection between cover and Vapolet.

Iron junction vapolets and covers are sprayed aluminum.

No. 6701

## Benjamin Industrial Lighting Vapolets

Listed by Underwriters' Laboratories

Ceiling Type

For use in indoor and outdoor locations where equipment is subjected to rough handling and corrosive fumes, vapors, etc.

Cast iron alloy junction box body; sprayed aluminum finish. One-piece composition receptacle. Plain clear glass globe supplied; for opal, heat-resisting and colored globes, prices on request.

Steel wire guard with cast iron threaded neck guard.

Pendant Type

When specified, brass guards and bodies can be furnished at a slight additional charge.

When desired without guard, deduct price of guard only from price of complete Vapolet, and specify Less Guard after Vapolet number.

### Benjamin Heavy Duty Vaporproof Lighting Units

Suitable for use in locations exposed to moisture or non-combustible dust.

The lamp is enclosed in a heavy glass screw globe. A single asbestos gasket between the hood and globe seals the lamp and assures a tight enclosure. A stuffing gland in the hood top seals the wire entrance.

The hood is an aluminum casting designed to accommodate the threaded, copper neck of the heavy gage steel reflector. Reflector rim is tightly closed to assure a smooth unbroken surface for the acid-resisting porcelain enamel. A formed copper gasket provides a cushion between the bottom edges of the hood and the porcelain surfaces of the reflector.

Hood is finished in sprayed aluminum; reflector is green outside, reflecting white inside.

Regularly supplied with plain clear or opal diffusing globes. Can be furnished with heat-resisting globe at an advance over the plain clear globe unit list, \$3.95 for medium and \$5.45 for mogul base units. To order, use suffix number of plain clear globe unit with HR.

Keyless rigid medium or mogul base sockets supplied. When specified, at 20 cents advance in list, shock-absorbing socket can be furnished. To order, suffix fixture number with SHB.

### Benjamin Heavy Duty Vaporproof Pendent Lighting Units

## Benjamin 400-Watt Mercury Lamp Units

Will not operate on ordinary lighting circuits unless special transformer or reactor equipment is provided.

### With 22-Inch Spread Porcelain Dome

No. 5485

For use with the standard 400-watt mercury lamp in general lighting installations.

The porcelain enameled steel dome shaped reflector provides uniform illumination on both horizontal and vertical surfaces and its 78° cut-off (bottom of light source) is lowered to 61° by the opal glass cylinder surrounding the lower portion of the lamp, which is furnished as standard.

Unit is available with spun steel neck for use with any of three Turnlox hoods or socket-reflector X fitting.

Turnlox ceiling hood fits 3/4 or 4-inch standard round or octagonal outlet boxes. Other Turnlox hoods and all X fittings tapped 1/2-inch standard; 3/4-inch if specified. Reflector is porcelain enameled steel, green outside, white inside.

Standard package, 4.

No.	Each	Type	Neck	DIMENSIONS, IN.

### With 20-Inch Porcelain Dome

No. 5480

For use with standard 400-watt mercury lamp in general lighting conditions.

The dome shaped reflector provides uniform illumination on both horizontal and vertical surfaces and its 72 1/2° angle of cut-off (bottom of light source) minimizes glare.

Available with spun steel neck for use with any of three Turnlox hoods or socket-reflector X fitting. An auxiliary reflector is provided to assure maximum light output.

Standard package, 4.

## Benjamin Steelite Armor-Clad Lighting Units

Listed As Vapor Tight by Underwriters' Laboratories, Inc.

Designed to stand up under severe mechanical strain and unfavorable atmospheric conditions.

Consists of a highly efficient Alzak aluminum reflector, enclosed in a protective steel housing to guard against damage caused by rough handling or from flying metal particles. The bottom of this housing is sealed against dust, moisture, and corrosive fumes by

a hinged cover, equipped with heat and impact-resisting glass which offers resistance to sudden impacts and is impervious to temperature changes.

Diameter of reflector, 18 inches. Overall diameter, 20 1/2 inches.

**Narrow Beam Units.** Recommended for lighting relatively small areas to a high intensity or for use where units must be mounted a considerable distance from the lighted surface. Equipped with an Alzak reflector having a satinized polished reflecting surface.

**Concentrating Units.** Recommended for lighting high narrow bays. Equipped with an Alzak reflector, with inner surfaces of etched aluminum, which concentrates light directly below the unit with most favorable illumination on horizontal surfaces.

**Spread Units.** For general industrial lighting; have an Alzak reflector with inner surfaces of etched aluminum. Provides a relatively broad distribution of light and gives uniform illumination on both horizontal and vertical surfaces.

Provided with X-type separable fitting tapped 1/2 inch standard, 3/4 inch if specified. Sockets are keyless, rigid, mogul base type with finger type lamp grip.

Packed 1 in a standard package.

SHOCK-ABSORBING SOCKETS supplied at 20 cents advance in price. To order, suffix number with SHB.

## Benjamin Emblem Sign Reflectors

Listed by Underwriters' Laboratories, Inc.

For lighting circular emblem signs of the type used around automobile service and gasoline filling stations and other similar small signs.

When installed as recommended, this reflector is neat and inconspicuous and does not interfere with the readability of the sign, day or night.

Conduit is led straight into side outlet of reflector hood. Hood, with reflector, is screwed to conduit, and drilled for attaching guy wires. Cast iron hood is electroplated; side outlet tapped for 1/2

inch standard, 3/4 inch when specified.

Has one-piece porcelain sockets, with easily accessible terminal screws. Symmetrical reflector is porcelain enameled steel, green outside and white inside.

Packed 10 in a standard package.

## Benjamin Master Sign Reflectors

Light Distribution Curves

Recommended for use on standard poster panels, standard city or suburban bulletins, 3-sheet poster panels, standard store bulletins and other types of signs; also standard highway bulletins, railroad metropolitan or highway bulletins.

Elliptical shaped reflector is porcelain enameled steel with side outlet. Regularly finished green outside, reflecting white inside; can be furnished white outside at no extra charge.

Has angle X-type weatherproof separable fitting with set screw. Tapped  $\frac{1}{2}$  inch, standard;  $\frac{3}{4}$  inch, if specified. Has one-piece porcelain, medium base rigid keyless socket with lamp grip to retard loosening of lamps under vibration.

Packed 9 in a standard package.

Prices do not include wires or lamps.

## Benjamin Pit and Tunnel Lighting Units

## For Multiple Circuits

Listed by Underwriters' Laboratories

Proper lighting of pit interiors and vehicles over the pits, lessens the danger of accidents to workers and increases their speed and effectiveness.

The trough-shaped porcelain enameled steel reflector assures maximum light output, while the refracting glass cover con-

centrates the major portion of the light on the underside of the object over the pit.

Suitable for built-in or surface installation in locations like repair shop service pits, railway and traction line repair pits, wash racks, viaducts, tunnels and similar locations. In some types of locations, such as viaducts, tunnels and subways, where lighting requirements are of a general nature, the pit light with a plain glass cover will be found more satisfactory than the refracting.

Fixture consists of a cover and an aluminum box which are held together by four bolts. Cover includes a cast iron frame, a heat-resisting glass cover, a double rubber gasket, which seals cover frame to box and glass to cover frame, and a brass wire guard.

Aluminum box includes a porcelain enameled steel trough-shaped reflector and a keyless socket. Body is tapped  $\frac{1}{2}$ -inch iron pipe size at both ends. When specified on order, body will be tapped either  $\frac{3}{4}$ , 1 or  $1\frac{1}{4}$ -inch iron pipe size, at no advance in list price.

Packed 1 in a standard package.

Size Lamp Watts	With Refracting Glass Cover		With Plain Glass Cover		Depth In.	Lgth. In.	Width In.

\*With wire clamp for feed wires.

Prices do not include wires or lamps.

## Benjamin Stock-Bin-Lite Reflectors

Listed by Underwriters' Laboratories

No. T-1876

For the lighting of stock-room bins and shelves, tool crib bins and shelves, stock-room carton stacks, file rooms, library book stacks and warehouse aisles.

Special deep-trough shaped reflector is porcelain enameled steel, white inside and out. Has apertures in each end to assist in building up illumination at points farthest away. Interchangeable in any of the hoods shown. Can be turned in hoods to any desired position and locked in place by tightening two screws on sides of hoods. Width of reflector,  $7\frac{7}{8}$  inches. Reflector should be mounted level with the top of the highest bin of shelf and the spacing distance between reflectors should never exceed 8 feet. A V-shaped deflector bar,  $11\frac{1}{4}$  inches long, is suspended below reflector to direct a portion of the light upward above the cutoff.

Cast iron hoods are available in pendent, angle, feed-through and outlet box. Pendent and angle hoods tapped  $\frac{1}{2}$  inch standard,  $\frac{3}{4}$  inch when specified (angle also 1 inch), without extra charge. Feed-through hood tapped  $\frac{1}{2}$  inch only. Ceiling hood fits 4-inch standard outlet boxes.

One-piece porcelain, rigid, keyless sockets are standard.

Complete unit consists of hood with reflector and socket.

Packed 10 in a standard package.

Pull Chain Sockets can be supplied, when specified, at 80 cents advance in list price. When ordering, add suffix PUL to number of fixture.

## Benjamin Socket-Reflectors

## Porcelain Enameled Steel

Sockets and Fittings Listed by Underwriters' Laboratories

Weatherproof, one-piece units, for indoor or outdoor use where interchangeability of reflectors and easy removal for cleaning are not considerations.

Complete unit includes reflector, socket and X-type fitting; an auxiliary aluminum oxide inner reflector which fits around lamp neck is supplied with all reflector sizes where it is of advantage.

The porcelain enameled steel reflector is green outside, reflecting white inside. The finish offers effective resistance to the deteriorating effects of fumes, moisture and grime and is easily cleaned.

Tapped  $\frac{1}{2}$  inch standard; when specified, tapped  $\frac{3}{4}$  inches, or supplied with  $\frac{1}{2}$  inch I.P. size insulating drop cord bushing, No. 1265. Strain relief cord grip at additional charge.

Elliptical angle reflector; medium base units tapped  $\frac{1}{2}$  inch standard,  $\frac{3}{4}$  inch, when specified; mogul units tapped  $\frac{3}{4}$  inch standard.

Symmetrical angle reflector tapped  $\frac{1}{2}$  inch standard,  $\frac{3}{4}$  inch, when specified.

Socket adapter straps, for changing lamp position, furnished at no extra charge.

**SELF-LOCKING SOCKETS:** prevent unauthorized lamp removal; furnished, when specified, on medium-base socket-reflectors. For rigid locking socket, add 50 cents to list price of fixture with regular rigid socket and suffix number of same with LOK. For shock-absorbing locking socket add 60 cents to list price of fixture with regular rigid socket and suffix number of same with ASL. Key No. 1399, for releasing lamps in both types, \$1.15.

Prices do not include wires or lamps.

## Benjamin Turnlox Reflectors

Hoods and Lamp Holders Listed by  
Underwriters' Laboratories, Inc.

Bayonet Type  
Coupling

Construction permits reflector, together with lamp, to be taken down with one simple movement.

Unit consists of two separable elements; hood with wiring terminal base, and reflector to which is assembled lamp holding element. Contact is made at any point where reflector heel may be entered in hood. Polarization is by circular design of contacts.

One type of terminal base is standard in ceiling, angle, and pendant type hoods and accommodates reflectors with medium or mogul base lamp holders.

Hood is made of cast metal.

Pendant and angle type are tapped 1/2-inch standard, 3/4-inch if specified.

**Elliptical Angle Type**  
Porcelain Enameled Steel

Hood has a corrosion resisting finish.

Reflector is porcelain enameled steel, green outside, reflecting white inside. Cut-off at 72 1/2 degrees.

Angle hood provides three reflector positions, 120° apart. Use fixture with No. 3 hood where reflector must face directly toward the conduit support; No. 3R, where reflector must face directly away.

## Type RR Benjamin Threaded Hood Units

Sockets Listed by Underwriters' Laboratories, Inc.

Suitable for use around railroad yards, steel mills, and other industrial plants where conditions require the most rugged and sturdy equipment.

Allows easy removal of reflectors for cleaning and interchangeability among the various types and sizes of reflectors.

Pendent hood is tapped 1/2-inch standard; 3/4-inch if specified, at the same price. Ceiling hood fits 4-inch standard, octagonal, or round outlet boxes.

Steel hood is finished in green enamel. Cast hood is finished in green paint enamel.

Reflector is finished porcelain enameled steel; green outside, white inside.

Furnished with special shock-absorbing socket which cushions the filament against jars and shocks, at 20 cents additional. To order, suffix number with SHB.

## Benjamin Dome Shade Holder Reflectors

Reflector and Lamp Manufacturers' (RLM) Standard

No. 14100N

Type N Shade Holder

Type S Shade Holder

For general illumination when it is desired to avoid reflected glare from the surfaces lighted and to avoid direct glare by having the angle of light cut-off agree with all state lighting codes. Angle of cut-off 72 1/2°.

Type N shade holder reflector is fitted with a neck so shaped as to fit any standard 2 1/4 or 3 1/4-inch shade holder.

Type S shade holder reflector has a screw threaded holder to fit Benco Sockets and Type S Outlet Box Fittings.

Reflectors are green porcelain enamel outside and white inside.

## Benjamin Snap-In Reflector Holders

### Attach to Any Type N Benjamin Reflector with Neck for 2 1/4-Inch Holders

Designed so that when used with Benjamin Reflectors and proper socket equipment, correct location of the lamp in the reflector is assured.

To attach, line up the rivet heads on holder with slots in reflector neck. Then push down with palm of hand, snapping holder into place. The Reflector with holder is then ready for attachment.

Standard package, 10.

Shipping weight per standard package, 2 pounds.

### \*No. 4386—Type A

For attachment to Ben-Ox sockets and fittings.

Made of copper; copper finish.

No. 4386.....each \$ .35

### No. 4384—Type B

For attachment to brass shell sockets with Uno thread.

Made of brass; natural brass finish.

No. 4384.....each \$ .35

### No. 4385—Type P

For attachment to standard porcelain or composition sockets.

Made of copper; bright metal finish.

No. 4385.....each \$ .50

### No. 4383—Type S

For attachment to Benco metal clad sockets and fittings, and other manufacturers' sockets with inside threads.

Made of copper; bright metal finish.

No. 4383.....each \$ .35

\*Type A holder method of attachment is slightly different from the procedure followed on other types.

## Benjamin Concentrating Type Alzak Aluminum Reflectors

For Lighting High Narrow Bays  
Listed by Underwriters' Laboratories

No. 4166 Socket-Reflector with  
No. N-6416 Dust-Tight Cover

No. 9168, Turnlox  
Ceiling Construction

Typical Curve

Recommended for lighting high, narrow rooms, requiring not more than three rows of units, as these reflectors concentrate light on the working plane directly below the units with the most favorable illumination on horizontal surfaces. Suitable for installation where the mounting height of the reflector is equal to or greater than the width of the area to be lighted.

Also satisfactory for use as medium-range open type floodlights.

The spacing distance between units should never exceed the mounting height.

**TURNLOX**; weatherproof bayonet mechanism permits removal of reflector and lamp from hood as a unit, for cleaning or storage. Supplied with Turnlox hoods and No. 2760 rigid, keyless, mogul base lamp holder. Pendent and angle hoods tapped  $\frac{1}{2}$  inch standard,  $\frac{3}{4}$  inch when specified. Ceiling hoods fit  $3\frac{1}{4}$  or 4-inch standard octagonal or round outlet boxes,  $1\frac{1}{2}$  inches or more deep.

**SOCKET-REFLECTOR**; standard Socket-Reflector, separable X-type fittings and No. 4657 keyless, rigid, mogul base sockets. Fitting tapped  $\frac{1}{2}$  inch standard,  $\frac{3}{4}$  inch when specified.

Reflectors are Alzak oxidized etched aluminum inside; natural Alzak outside. Caps on X-type fittings are cast aluminum. Turnlox hoods are finished in baked aluminum paint over electro-plating.

Packed 4 in a standard package.

Prices do not include wires or lamps.

**SHOCK-ABSORBING HOLDERS AND SOCKETS**; supplied in place of rigid type holder and sockets at 10 cents advance in list price. To order, suffix number with SHB.

## Benjamin Spread Type Alzak Aluminum Reflectors

For General Lighting Installation

Sockets Listed by Underwriters' Laboratories

No. 4178, Socket-Reflector  
Construction

No. 7174, Turnlox  
Pendent Construction

Typical Curve

Suitable for general lighting installations where a relatively broad distribution of light and uniform illumination is desired.

Also used as an open type floodlight, where it is desired to cover a relatively large area at close range.

Spacing distance between units should never exceed one and one-quarter times the mounting height.

**TURNLOX**; weatherproof bayonet mechanism permits removal of reflector and lamp from hood as a unit, for cleaning or storage. Supplied with Turnlox hoods and No. 2760 rigid, keyless, mogul base lamp holder. Pendent and angle hoods tapped  $\frac{1}{2}$  inch standard,  $\frac{3}{4}$  inch when specified. Ceiling hoods fit  $3\frac{1}{4}$  or 4-inch standard octagonal or round outlet boxes,  $1\frac{1}{2}$  inches or more deep.

**SOCKET-REFLECTOR**; standard Socket-Reflector, separable X-type fittings and No. 4657 keyless, rigid, mogul base sockets. Fitting tapped  $\frac{1}{2}$  inch standard,  $\frac{3}{4}$  inch when specified.

Reflectors are Alzak oxidized etched aluminum inside, aluminum outside. Caps on X-type fittings are cast aluminum. Turnlox hoods are finished in baked aluminum paint applied over electro-plating.

Packed 4 in a standard package.

**SHOCK-ABSORBING HOLDERS AND SOCKETS**; supplied in place of rigid type holder and sockets at 10 cents advance in list price. To order, suffix number with SHB.

## Benjamin Radial Wave Outdoor Reflectors

### Porcelain Enameled Steel

No. 1206

Packed 5 in a standard package.

Reflector is 18 inches in diameter, of porcelain enameled steel; green outside, reflecting white inside.

Supplied with porcelain rigid, keyless socket and separable X-type fittings, tapped  $\frac{1}{2}$  or  $\frac{3}{4}$  inch.

Fittings, goosenecks and brackets, electroplated.

### With Gooseneck Supports

Has socket fitting assembly, No. 2368 medium base and No. 4666 mogul base; No. 5037, 40x $\frac{3}{4}$ -inch gooseneck. Nos. 1204 and 1205 include No. 5031 wall fitting; Nos. 1206 and 1207 have No. N-5026-V wall fitting and No. 6203 cross arm. Tapped  $\frac{3}{4}$  inch.

SHOCK-ABSORBING SOCKETS can be supplied when specified at 20 cents advance. To order, suffix number with SHB.

## Benjamin Unit Package Fixtures

Listed by Underwriters' Laboratories, Inc.

Unit consists of a durable porcelain enameled steel reflector, a detachable cast iron hood, No. 1706 medium base receptacle, a section of  $\frac{1}{2}$ -inch conduit with wall or outlet box fitting and two 24-inch lengths of No. 14 gage rubber covered, solid copper, single conductor wire. The conduit entrance in hood has set screw to prevent accidental loosening of assembly.

Reflector is green outside, white inside. Hood, conduit section, and mounting fitting is sprayed aluminum over electro-plating.

Prices do not include lamps.

### Shallow Dome Reflectors with Brackets

For lighting farmyards, barns, stables and driveways. Supplied with a 16-inch length of  $\frac{1}{2}$ -inch conduit and wall fitting. Two lag screws are furnished for attachment.

Complete units are individually packed in attractively labelled shipping containers. Standard package quantity is 5.

## Benjamin Flexible Suspension Fittings

Furnished with medium or heavy shock absorber to accommodate various weights of fixtures. Medium springs are for fixtures weighing from 3 to 8 pounds, heavy for 8 to 16 pounds. Specify spring desired, otherwise medium weight will be supplied. Tapped,  $\frac{1}{2}$  inch.

No. 3366

### Outlet Box Cover Type

Has flexible joint, permitting fixture to hang plumb. Mounting screw holes are elongated.

Sprayed aluminum finish applied over electro-plating.

Shipping weight per standard package, 8 pounds.

No. 3366, with Steel Cover for 4-Inch Box.....each \$1.05

No. 3367, with Steel Cover for M Junction Vapolet Box.....each 1.05

### No. 3355 Canopy Type

Fitting is supported by a strap with slots to slip over the screws on the ears of standard 3 $\frac{3}{4}$  and 4-inch outlet boxes. May also be mounted on fixture stud by using stirrups.

Metal parts are electro-plated.

Shipping weight per standard package, 7 pounds.

No. 3355.....each \$1.50

Benjamin Universal Joint 45° Aligners  
Outlet Box Cover Type

Listed by Underwriters' Laboratories, Inc.

Consists of a steel pipe bushing, tapped 1/2 or 3/4 inch, which swings forward or back on two pivot studs joining it to a steel cup. In turn, this cup is hinged to the steel cover of the aligner to allow movement in a plane at right angles to the first, thus providing free movement through 45° in any direction. Sprayed aluminum finish over electro-plating.  
Packed 10 in a standard package; weight, 7 pounds.

No.	Each	Description	Tap. In.
N-3380	\$ .70	*For 3/4 and 4-In. Rd. & Oct. Outlet Box.	1/2
N-3385	.90	For 4-Inch Square Outlet Box.....	1/2

\*Also fits plaster cover with ears spaced on 2 3/4-inch centers.  
†Supplied tapped 3/4-inch size, when specified, at same price.

Benjamin Porcelain Enameled Stem Suspensions

With 45° Canopy Type Ball Aligners  
Listed by Underwriters' Laboratories, Inc.

For use with standard 3/4 and 4-inch outlet boxes, allowing lighting units to hang plumb from boxes on ceilings having up to 45° slope. Finished in white porcelain enamel.

No. 8906

Has an adjustment feature to compensate for boxes slightly recessed or protruding beyond plaster line. Porcelain enameled steel canopy has a chromium plated die-cast aligner ball, which swivels between two steel plates inside the cover, and a steel mounting strap for attaching to the outlet box or stud. Canopy and aligner plate assembly are joined to the mounting strap by two threaded studs provided with lock and cap nuts. Aligners are provided with metal-to-metal contact for automatic grounding. Canopy cover has 1/2-inch diameter knock-out at the side. Porcelain enamel stems are of 1/2-inch iron pipe size, threaded at both ends. Aligners attach to 3/4 or 4-inch standard round or octagonal boxes using either box ears or a 3/8-inch fixture stud. They also fit 4-inch square boxes by using fixture stud only. For boxes 1 1/2 inches or more deep, a fixture extension is needed. Slotted attaching holes in mounting strap are spaced on 2 3/4 or 3 1/2-inch centers. Packed 5 in a standard package.

## No. 1263R Benjamin Strain Relief Watertight Cord Grips

Serves as a strain relief cord grip and as a watertight cord bushing for outdoor installations.

Attaches to any reflector fitting tapped 1/2-inch and accommodates any cord from 3/8 to 1/2-inch inclusive.

Consists of steel bushing, brass nut, washer and a rubber stuffing gland. Packed 10 in a standard package. Weight per standard package, 2 pounds.

No. 1263R.....each \$1.30

## No. 1265 Benjamin Insulating Bushings

A composition bushing for drop cord suspension of fixtures tapped 1/2-inch; 1 1/2-inch center hole.

Packed 200 in a standard package.

Weight per standard package, 4 pounds. No. 1265.....each \$.10

## No. 1261 Benjamin Strain Relief Cord Grips

A simple type of fitting which serves both as a strain relief and a cord bushing.

Easily attached to any socket tapped 1/2-inch, and accommodates any cord from 3/8 to 1 1/2-inch diameter, inclusive.

Consists of malleable iron bushing with 1/2-inch iron pipe thread, to which two steel straps, forming the cord grip, are attached by machine screws.

When properly installed, this fitting will relieve the wiring terminals of all strain, transferring it to the body of the socket.

Packed 50 in a standard package.

Weight per standard package, 5 pounds.

No. 1261.....each \$.25

## No. 5429 Hubbell Half Reflectors With Adjustable Holder

Adjustable holder can be securely screwed to the threads on socket shell, and turned as much as one full turn to adjust.

Made of steel; green and white finish.

Size lamp, 25, 40 and 60 watts.

Package weight, 9 pounds.

No. 5429.....per 100 \$70.00

## No. 5564 Hubbell Parabola Reflectors With Adjustable Holder at Side

Size, 6 1/2 Inches

Adjustable holder can be securely screwed to the threads on socket shell, and turned as much as one full turn to adjust.

Made of steel; green and frosted finish.

Size lamp, 25, 40 and 60 watts.

Carton, 1. Standard package, 30. Package weight, 19 pounds.

No. 5564.....per 100 \$156.00

## No. 5432 Hubbell Flat Reflectors For Threading Direct to Brass Shell Sockets

Made of tin; white finish.

Size lamp, 25, 40 and 60 watts. Size, 10 inches.

Carton, 10. Std. pkg., 50.

Package weight, 20 pounds.

No. 5432.....per 100 \$72.00

## Hubbell Cone Reflectors For Threading Direct to Brass Shell Sockets

Made of tin; green, white finish.

## Wheeler RLM One-Piece Solid Neck Reflectors

Standard

Deep Bowl

30° Angle

Shallow

A line of solid neck one-piece reflectors, which have been expertly designed and carefully manufactured to provide maximum lighting efficiency. These units are attractive in appearance, rugged in construction, and will give long, trouble-free service.

Recommended for both indoor and outdoor use in locations where quick removal or interchangeability of reflectors is not important or necessary.

The neck construction provides a rugged 1-piece reflector unit, in which the Wheeler Standard 2-Piece Socket is attached to a brass yoke with a deep hex shoulder. This shoulder fits a hex hole in top of reflector neck, and is securely clamped by an aluminum locknut.

Reflectors are porcelain enameled green outside, white inside. Yokes are tapped  $\frac{1}{2}$ -inch pipe size standard;  $\frac{3}{4}$ -inch pipe size when specified, at no extra charge.

Bottom pull chain medium base sockets can be furnished at \$1.25 extra; shock absorbing sockets at 10 cents extra.

## Wheeler Class II-G Vapolux Fixtures

**Dust-Tight and Vaporproof**  
For Hazardous Locations  
Approved by Underwriters' Laboratories

Standard

30° Angle

Used in locations where combustible dust atmospheres exist. Typical locations are flour mills, feed mills, grain elevators, starch mills, sugar, cocoa and coal pulverizing plants, and establishments or industries involving similar hazardous processes or conditions.

Consists of a two-piece cast aluminum canopy, socket, aluminum baffle plate, acid-resisting porcelain enameled steel reflector, and a convex shaped heat-resisting cover glass.

Reflector body, with sealed-in cover glass assembly, can be removed as a unit over the lamp by unscrewing from canopy body. Reflectors are porcelain enameled green outside, white inside. Canopies are finished natural aluminum.

Canopies are tapped  $\frac{1}{2}$ -inch standard;  $\frac{3}{4}$ -inch when specified, at no increase in price.

## Wheeler Isolux Sign Reflectors

Two-Piece Medium Base

Top Outlet Canopy

Designed for lighting signboards and other vertical surfaces.

Made with a separable cast iron canopy, having a hot dipped galvanized finish.

Reflector may be assembled to canopy in either normal or reversed positions.

Two styles: side outlet canopy, tapped for  $\frac{1}{2}$ -inch or  $\frac{3}{4}$ -inch pipe; top outlet canopy, tapped  $\frac{1}{2}$ -inch only.

Unless otherwise specified, reflector will be furnished porcelain enameled green outside, white inside. Also available in white porcelain enamel outside at no increase in price. Other colors available, prices on request.

## Wheeler Vaportight Pendent and Ceiling Fixtures

Approved by Underwriters' Laboratories

Wheeler vaportight fixtures are sturdily constructed units, made to resist the deteriorating effects of vaporous and adverse atmospheric conditions.

Fixtures consist of a cast iron canopy with either pendent top or ceiling top, a socket, vaporproof glass globe, and an acid-resisting porcelain enameled steel reflector.

The reflector is securely fastened to the canopy. Reflectors are interchangeable throughout the medium base and mogul base range. A gasket between the globe and canopy and one between the mounting top provide a tight unit.

**Wiring.** By removing the mounting top from the cast canopy, the socket is fully exposed so that wiring to socket terminals is easily done.

**Canopies and Canopy Tops.** Canopies are durable iron castings. They are supplied with pendent tops for standard 1/2-inch conduit, or with ceiling tops drilled with two holes

to fit any standard 4-inch outlet box. The conduit system is effectively sealed by a stuffing gland, which prevents dirt, moisture or gases from entering system through the fixtures.

**Finish.** The cast iron canopy is finished in baked green enamel. The exterior of the reflector is finished in green porcelain enamel. The reflecting surfaces are white porcelain enamel.

**Glass Globes.** Supplied in clear and opal glass in a squat or pear-shaped design. Pear-shaped globes are used with medium base sockets and have a maximum thread diameter of 4 1/4 inches. Squat globes are used with mogul base sockets, and have a maximum thread diameter of 5 5/8 inches. Globes screw directly into the canopy.

**Wire Guards.** Guards are available for all vaportight fixtures, pendent or ceiling, with or without reflectors.

## Wheeler Durex Industrial Canopy and Reflector Combinations

N.E.C. Standard

RLM Standard

Shallow Dome

RLM Deep Bowl

30° Angle

Fixture consists of a canopy, socket, and a porcelain enameled steel reflector.

Recommended for industrial plant lighting, railroad lighting, garage lighting, and wherever rugged, serviceable lighting fixtures are required.

Durex canopies are made in four types and fill the needs of the most difficult and unusual lighting requirements. This line represents one of the most complete developments in modern lighting equipment.

**RLM Standard.** For general industrial lighting.

**Shallow Dome.** For platforms, sheds, warehouses, and yards.

**RLM Deep Bowl.** Recommended for work benches or

elsewhere when concentrated light is desired.

**30° Angle.** For side lighting.

There are two types of Durex canopies for pipe installation, one for outlet box installation and one for drop cord construction. Canopy supplied with an aluminum screw ring which provides a cushion grip on the porcelain enameled threaded neck of the reflector. No set-screw is required to keep reflector in place. No washers, lock nuts, or yokes are necessary. Canopy is short, allowing socket to be exposed for easy wiring when reflector is removed.

Durex reflectors are interchangeable in the various types of Durex canopies.

Porcelain enameled green outside, white inside.

## Revere High, Medium, and Low Bay Lighting Units

No. 6602  
Aluminum Reflector

For 300 to 1500 Watts

No. 5625  
Steel Porcelain Enamel  
with Alzak Aluminum  
Reflector

## Installation

After the socket is threaded tightly on the conduit and wired, unscrew locknut A and remove key-collar B. Then slip the reflector up over the socket and conduit. Replace key-collar and lower reflector into place. Thread on locknut to a snug fit.

Designed for crane bays, auditoriums, stadiums, hangers, gymnasiums, and other large areas with high ceilings.

## Features

Alzak aluminum or porcelain enamel reflector.

Three beam spreads. Furnished with plain glass or Herculite glass and hinged covers.

Quick, easy installation and an easy adaptation to any lowering device.

Reflector removal without disturbance of wiring. Two-piece separable socket that is easy to wire with no slack to dispose of. Safe reflector mounting which prevents the reflector from falling even when the locknut is removed. Weatherproof construction. Conduit suspension of  $\frac{1}{2}$  or  $\frac{3}{4}$  inches, and hexagonal caps which permit use of wrench to obtain secure mounting.

Twin-Lite Combination

## Thompson Disconnecting and Lowering Hangers

For Indoor Installation—Underwriters' Approved  
3-Way (3 Circuit) 4-Wire (4 Pole)

**Model No. L-321**, having an open face pulley sheave housing is suitable for a wide range of installation conditions. For combination mercury-incandescent fixtures, etc., this hanger is ideal.

Furnished with Type M  $\frac{3}{4}$ -inch male adapter.

Model No. L-321, Black Japan.....each \$18.00  
Model No. L-321, Cadmium Plated or Galv.....each 20.00

**Model No. L-325** has the enclosed type of pulley sheave housing. The pulley sheave housing is tapped for  $\frac{3}{4}$ -inch conduit for enclosing the operating chain from the hanger to the conduit-type corner pulley (L-607). The chain delivery is confined to horizontal only. Especially suitable

for auditorium use with fixtures of 1, 2, or 3 circuits, such as colored lights, rheostat circuits, etc.

Furnished with Type M  $\frac{3}{4}$ -inch male adapter.

Model No. L-325, Black Japan.....each \$19.50  
Model No. L-325, Cadmium Plated or Galv.....each 21.50  
Single Circuit (2 Pole)

**Model No. L-141** will be found suitable for most inside installations. Open face of sheave housing permits operating chain to enter at any vertical angle up to 15 degrees above horizontal.

Furnished with  $\frac{1}{2}$ -inch male standard adapter.

Model No. L-141, Black Japan.....each \$14.00  
Model No. L-141, Cadmium Plated or Galv.....each 16.00

**Model No. L-145** is suitable only for installations where the operating chain may be run horizontally in  $\frac{3}{4}$ -inch conduit over to a conduit-type (L-607) corner pulley at wall or column. Enclosed pulley and chain is suggested for extremely dusty locations or where it is desired to eliminate

all chain sag between pulleys.

Furnished with  $\frac{1}{2}$ -inch male standard adapter.

Model No. L-145, Black Japan.....each \$15.50  
Model No. L-145, Cadmium Plated or Galv.....each 17.50

## Thompson Disconnecting and Lowering Hangers

For Outdoor Installation—Single Circuit (2-Pole)  
Underwriters' Approved

**Model No. L-181** has an open face pulley sheave housing. This permits operating chain to travel at almost any required slope over to pole or wall, clearing brackets, knee braces, etc.

With  $\frac{1}{2}$ -inch male standard adapter.

Model No. L-181, Black

Japan ea. \$15.50  
Cadmium Plated or Galvanized ea. 17.50

**Model No. L-185** provides maximum weather protection. Sheave housing is tapped for  $\frac{3}{4}$ -inch conduit for enclosing operating chain from hanger to corner pulley (L-607). Wherever possible, conduit enclosure of the vertical portion of operating chain is also suggested. Do not bend conduit.

With  $\frac{1}{2}$ -inch male standard adapter.

Model No. L-185, Black Japan.....each \$17.00  
Model No. L-185, Cadmium Plated or Galvanized.....each 19.00

## Thompson Shock Absorbers

These shock absorbers may be used either with Thompson Hangers or separately. Designed primarily to protect lighting fixtures from shock and vibration, they are also adaptable to many other uses.

Simple and rugged in construction, easy to install and without a bolt, screw or nut to work loose, they afford maximum protection with long trouble-free life.

There are two sizes and three types, and a range of springs to cover suspended weights from  $1\frac{1}{2}$  to 65 pounds.

Finish: junior size, cadmium plated; heavy duty size, hot dip galvanized. Bottom fixture connection on all models is  $\frac{1}{2}$ -inch male pipe thread.

Junior Size					Heavy Duty Size				
TOP CONNECTION				Total Weight Pounds of Fixture	TOP CONNECTION				Total Weight Pound of Fixture
$\frac{1}{2}$ -Inch Female	$\frac{3}{4}$ -Inch Male	No.	No.		$\frac{1}{2}$ -Inch Female	$\frac{3}{4}$ -Inch Male	No.	No.	
10L	20L	\$1.90	1 $\frac{1}{2}$ - 5		50L	60L	\$2.90	5-12

Total Weight of Fixture.....pounds	5-12	9-25	15-40	30-65

## Thompson Disconnecting and Lowering Hangers

Unit Packages—For Outdoor Use  
Underwriters' Approved

Since the mounting heights and methods of mounting of outside lights is more uniform, standardization of some of the equipment is possible.

Outdoor lights may be divided into two classification groups; viz., (1) those which hang in a vertical position from a threaded stem connection, such as R.L.M.'s, elliptical angle reflectors, and street lighting type of light; and (2) those which provide for vertical adjustment of the beam and hang from a "U" shaped bail or yoke, such as many of the most popular floodlights. It is therefore possible to make available Unit Packages suitable for these two groups. These two groups with their modifications are listed below.

### For Reflectors with Threaded Stem Connection

These Unit Packages contain—Thompson Hanger (galvanized), corner pulley, flare end, U-bolts and filler blocks, bracket end, slip fit elbow, lock box No. 691, anti-slap chain spring No. 906, and 33 feet of No. 33 galvanized steel chain. For 50-foot length of chain add \$1.40 to prices.

#### Vertical Run of Chain Not Enclosed

No. UPBL-177-1 $\frac{1}{4}$ , For Mounting on 1 $\frac{1}{4}$ -Inch Pipe Bracket.....each	\$32.00
No. UPBL-177-1 $\frac{1}{2}$ , For Mounting on 1 $\frac{1}{2}$ -Inch Pipe Bracket.....each	32.50

#### Vertical Run of Chain Conduit Enclosed

Contents of the following Unit Packages is the same as above except special link No. 911 substituted for anti-slap spring on chain end,  $\frac{3}{4}$ -inch conduit connected lock box No. 692 substituted for open type No. 691, and flare end No. 700 omitted.

No. UPBL-177-1 $\frac{1}{4}$ , For Mounting on 1 $\frac{1}{4}$ -Inch Pipe Bracket.....each	\$35.00
No. UPBL-177-1 $\frac{1}{2}$ , For Mounting on 1 $\frac{1}{2}$ -Inch Pipe Bracket.....each	35.50

### For Floodlights with Bail or Yoke

These Unit Packages contain—Thompson Hanger (galvanized) equipped with conductor cable clamp, special floodlight-adaptor Type R and the other accessories listed above for corresponding numbers.

#### Vertical Run of Chain Not Enclosed

No. UPBL-1177-1 $\frac{1}{4}$ , For Mounting on 1 $\frac{1}{4}$ -Inch Pipe Bracket.....each	\$36.00
No. UPBL-1177-1 $\frac{1}{2}$ , For Mounting on 1 $\frac{1}{2}$ -Inch Pipe Bracket.....each	36.50

#### Vertical Run of Chain Conduit Enclosed

Contents of these Unit Packages same as above except special link No. 911 substituted for anti-slap spring on chain end,  $\frac{3}{4}$ -inch conduit connected lock box No. 692 instead of open type No. 691, and flare end No. 700 omitted.

No. UPBL-1177-1 $\frac{1}{4}$ , For Mounting on 1 $\frac{1}{4}$ -Inch Pipe Bracket.....each	\$39.00
No. UPBL-1177-1 $\frac{1}{2}$ , For Mounting on 1 $\frac{1}{2}$ -Inch Pipe Bracket.....each	39.50

NOTICE Floodlights when lowered must balance so that stem of Hanger lower member is vertical. If floodlight is not supported at a point over its center of gravity (see illustration above) use Channel Balance Arm.

### No. 761 Channel Balance Arm 5-Inch Adjustment

No. 761.....each	\$3.30
------------------	--------

## Accessories for Thompson Disconnecting and Lowering Hangers

For every "Thompson Hanger" installation corner pulleys, and sometimes intermediate pulleys are required. Also operating chain, chain-end-link, and lock box (or grip cleat) for securing operating end of chain will be required. Select the accessories to suit the "Hanger" model used.

### Pulleys

No. L-607

No. L-611

No. L-612

No. L-615

No. L-616

No. ....	L-607	L-611	L-612	L-615	L-616
Black Japan.....each	\$3.30	\$1.70	\$1.80	\$2.20	\$2.60
Cad. or Galv.....each	3.80	1.90	2.00	2.50	2.90

### Steel Arc Lamp Chain

The operating chain required for every installation of Thompson Hangers should be carefully selected from the following table. Select chain according to the total weight of fixture plus connections.

For each operating chain, order one No. 900 and one No. 910 connecting link.

NOTICE: Chain is sold only in multiples of 50 feet.

No.	Hot Galv. per 100 Feet	Weight of Fixtures & Connections Pounds	Rated Tensile Strength Pounds	Connecting Link, 1 per Hanger No.	Wt., Lb. per 100 Feet
35	\$6.00	Under 25	550	910	8
33	7.30	Under 50	725	911	10
31	7.50	Under 70	915	912	13

### Grip Cleat and Lock Boxes

No. 690  
Grip Cleat

No. 691  
Lock Box

No. 692 Lock Box

For securing the free end of the operating chain, choose from the following:

**No. 690 Grip Cleat.** This grip cleat affords an easy and inexpensive method of securing the end of the operating chain where locking is not necessary.

No. 690.....each \$2.25

**No. 691 Lock Box.** Where the vertical portion of the operating chain is not conduit enclosed, the No. 691 lock box provides a method for padlocking the end of the operating chain.

No. 691, Padlock not included.....each \$1.20

**No. 692 Lock Box.** Where the vertical portion of the operating chain is enclosed in  $\frac{3}{4}$ -inch conduit, the No. 692 lock box should be used. It is threaded at the top to receive  $\frac{3}{4}$ -inch conduit. Requires padlock.

No. 692, Padlock not Included.....each \$5.00

## Type MUA Crouse-Hinds Floodlights

## Schedule F

Designed for lighting gasoline service stations, tennis courts, playgrounds, swimming pools, parking spaces, football fields, baseball and softball fields.

The MUA line of light duty floodlights consists of three different types of reflectors, each of which can be furnished in several combinations. All of the reflectors are interchangeable on either of the two heads, and each reflector has different lighting characteristics.

## Model I Head

With Cross Arm Mounting

Medium beam reflector is designed for a beam spread of approximately 90°. It is very effective for medium range projection.

Narrow beam reflector has a beam spread of 30°. It is very effective for spotting small areas.

Can be furnished with hinged door and heat-resisting lens to keep the reflector clean and protect the lamp. Standard lens is clear; a stippled lens will be furnished if desired.

## With Medium Beam Etched Alzak 18-Inch Reflector

42179	Cross Arm.....	23.00
42181	Pole Bracket.....	24.00
42382	Pendent Mounting.....	21.00

Prices Do Not Include Incandescent Lamps

Slip fitter, cross arm base, pole bracket, and pendent mountings can be supplied.

Furnished with 750, 1000, or 1500-watt, PS-52 bulb lamp. Floodlights will be furnished arranged for standard 500-watt lamp, if specified. Porcelain mogul screw base receptacle.

Finish: porcelain enameled reflectors, white inside and blue outside; aluminum reflectors, non-tarnishing Alzak; and support head, aluminum.

## Alumalux Aluminum Reflectors

## Model II Head

With Cross Arm Mounting

The adjustable head and support arm is recommended for athletic field installations. Can be tipped completely over for convenience when relamping and cleaning and when it is swung back against the adjustable relamping stop, it is in its exact original position.

Mounting provides both horizontal and vertical degree scales for accurate setting of the floodlight during installation. Special cross arm bracket for steel tower mounting, using two bolts, can be furnished without additional charge if specified.

Furnished wired complete with two single conductors of rubber-covered service wire, 4-feet long, or 4 feet of 2-conductor cable. Either open style or with enclosing lens. Hinged door and lens recommended for keeping the reflecting surface free from dirt and dust, and preventing lamp breakages. Standard lens is clear; a stippled lens will be furnished if desired.

42741	\$85.00	With Wide Beam Polished Alzak Reflector	300 to 1000	PS-52
42932	85.00	With Narrow Beam Polished Alzak Reflector	300 to 1000	PS-52
42743	85.00	With Narrow Beam Polished Alzak Reflector	500 or 1000	G-40

Available with Slip Fitter at same price.

### Type LCE-1120 1500 Watts

Used for the illumination of large areas.

The unit can be arranged with plain, spread or diffusing lens.

The 750, 1000, or 1500-watt, PS-52 bulb lamp; or the 1000 or 1500-watt, G-bulb lamp, may be used as required.

When used with the G-bulb lamp, the housing is tipped over so that the lamp operates in a base-down position.

Finish: case, natural aluminum; base and trunnion, galvanized.

Shipping weight, 115 pounds.

No.	Each	Description	LAMP	
			Watts	Bulb
42745	\$140.00	With Wide Beam Polished Alzak 20-Inch Reflector	750 to 1500	PS-52

## Crouse-Hinds Portable Floodlight Projectors

Types ADR-12 and ADR-14

12-Inch, 200 to 250-Watt—14 Inch, 500-Watt

Type ADR-12

Type ADR-14

For portable use with either a narrow beam spotlight or a wide, evenly distributed, beam of light.

Housing: cast aluminum alloy, dust-tight, non-ventilated, and weatherproof.

Wiring connections: 10 feet of heavy-duty rubber-covered cable is furnished with a standard parallel blade plug.

Furnished with polished Alzak reflector.

Lamps are not included.

No.	Each	Type	*Lens	LAMP	
				Watts	Bulb
42950C	\$50.00	ADR-12	Diffusing	200 or 250	PS or G
42023C	50.00	ADR-12	Plain	200 or 250	PS or G

## Type GCP-14 Crouse-Hinds Lantern Floodlights

### Schedule F

An ornamental lantern type floodlight designed for the illumination of buildings, gasoline service stations, and other locations where the appearance of the lighting unit is a factor of importance.

The daytime appearance is that of an ornamental street lantern. At night, the large, efficient reflector on the inside transforms the unit into a powerful floodlight.

\*For lighting above horizontal.

†For lighting below horizontal.

Units with floodlighting reflector are furnished with a medium screw base auxiliary lamp receptacle.

Lamps are not included.

## Crouse-Hinds Floodlights

### Schedule F

#### Types MDB-8 and MDB-10

8-Inch, 100 Watts

10-Inch, 200 Watts

Lightweight, weatherproof; for lighting residential yards, driveways.

Round flange base can be bolted to flat horizontal or vertical surface. Holes are spaced to fit holes in a 4-inch outlet box. Steel stake provided for temporary mounting on ground. Suspension mounting furnished without additional charge. Aluminum finish.

Furnished with polished Alzak reflector, units become spotlights.

Incandescent lamps not included.

Shipping weight: Type MDB-8, 7½ pounds; Type MDB-10, 9 pounds.

## Crouse-Hinds Floodlights

### Schedule F

#### Type MDB-14, 14-Inch, 500 Watts and Type MDB-16, 16-Inch, 1000 Watts

#### Type MDB-14, Floodlight Complete, without Cover Glass

With Standard Base

Lightweight, weather-proof floodlights. Furnished with heat-resisting clear lenses.

Cast aluminum socket housing and support. Reflectors are for narrow, medium and wide beam; attached to housing by four screws and key-hole slots.

When installing the floodlights, housing and mounting can be installed and wired complete before reflector is attached. Aluminum finish.

Incandescent lamps are not included in numbers and prices.

\*Does not include head and support base.

†Less Mounting.

‡Includes Cover Glass and Clamp Ring.

§Includes Cover Glass and Hinged Door.

## Type SPS Crouse-Hinds Swimming Pool Floodlights

*Schedule F*  
For Dry Niche Mounting

For pools which have a passage around the outside wall, or for installation in a manhole. In the latter case, the design is such that a very small manhole can be used. It is not necessary for the service man to enter the manhole, as the unit is easily unhooked and lifted to the surface for relamping.

A 3-conductor cable is furnished with the unit. The third wire is grounded to the floodlight. Housing: bronze is standard for swimming pools; cast aluminum can be used in fresh water.

Door frame: cast bronze, or cast aluminum, natural finish. Lens: Convex, Pyrex, heat-resisting, horizontal spread lens, 16 $\frac{1}{16}$  inches in diameter (No. HL6810).

Lamps: 500 or 1000-watt, G40 bulb, 115-volt floodlight service lamp; not included in prices.

## Type RCDE-8 Crouse-Hinds Explosion-Proof Floodlights

*Schedule R*

With Trunnion Mounting

Pit Light

Designed to meet the requirements of an explosion-proof floodlight.

Recommended for use around oil refineries, chemical plants and for lighting spray booths from the outside.

The Pit Light is recommended for lighting automobile greasing pits and lifts and for general use in hazardous locations.

### With Trunnion Mounting

41717A	89.00	41718A	86.00	Brass	Brass

Prices do not include lamps.

## Type RCD-8 Crouse-Hinds Lighting Units

*Schedule R*

Designed for mounting in concrete. Provides perfect lighting for pits, underpasses, tunnels and washracks.

### Form F for Floor Mounting

Watertight, door overlaps case; projects above concrete about  $\frac{3}{16}$  inch. Door has rough pebbled surface. Has flat glass lens; heavy enough to allow it to be stepped on or driven over, impact resisting. Available only in plain type. Leaded in.

No. 41427A.....each \$20.00

### Form W for Wall Mounting

Similar to Form F, except that it is provided with a hinged and flush door, so that it can be set absolutely flush with a concrete wall.

Can also be mounted on a ceiling or wall by using brackets.

Refracting lenses can be set to refract light up or down.

Black enamel finish.

With Grid.....	41409	\$20.00	41410	\$20.00
Without Grid.....	41332	19.00	41334	19.00

Prices do not include incandescent lamps.

## No. 43729 Type RMC-8 Watertight Marine Lighting Units

*Schedule F*

For Deck or Hold Lighting  
100 Watts

Meets requirements of U.S. Maritime Commission. Lightweight, allows easy handling and reduces considerably total weight of any vessel requiring several hundred fixtures.

Housing: cast aluminum alloy, dust-tight and weatherproof. Can be drilled and tapped at factory, at additional cost of \$.10 for each tapped lug.

Mounting: four lugs are provided for surface mounting.

No. 43729, Type RMC-8.....each \$16.00

## Type FS Crouse-Hinds Lighting Units

*Schedule F*

6-Watt

25-Watt

Small lighting units made to mount flush in concrete, stone, or plastered walls; to light steps, walks, floors and gardens. Also used in hospitals, mounted low in the wall for lighting the floor without disturbing patients.

Cover is equipped with refracting glass, which is normally set to refract light downward. Two styles are shown; a 25-watt and 6-watt unit, with two hub combinations each, through feed and bottom hubs.

### \*With Aluminum Cover

## Crouse-Hinds Lenses

Plain Lens

Spread Lens

Most Crouse-Hinds floodlights are supplied as standard equipment with plain, convex, Pyrex, heat-resisting lenses. Unless another lens is specified on the order, plain lens will be furnished. The plain lens does not alter the beam spread of the floodlight in any way.

### Light Control Lenses

It is often desirable to increase the natural spread of a floodlight beam either in all directions or in one direction only. To meet this condition, the Crouse-Hinds Company can supply two different types of lenses as described below. There is no additional charge for these lenses, if specified on the order.

### Diffusing Lenses

The convex, heat-resisting, diffusing lens spreads the natural beam both horizontally and vertically, giving a larger light spot. This lens is used where the natural spread from the floodlight is not sufficient to cover the area desired.

### Spread Lenses

The convex, heat-resisting, spread lens spreads the light at right angles to the direction of the ribs, leaving the spread in the other direction the same. The resulting beam is elliptical in shape. When the ribs are vertical, the beam is spread horizontally and when they are horizontal, the beam is spread vertically. The lens can be set at the factory for either spread, and the order should specify which is desired. This type of lens is very useful when lighting rectangular areas. The nominal beam spread produced with the standard spread lens is 45° to 50°. The actual beam spread depends on the characteristics of the floodlight with which the lens is used.

### Color Screens

Floodlights using 500-watt or larger lamps can be furnished with red, amber, green, or blue color screens. These screens are placed inside the floodlight, behind the clear lens. 12-inch projectors can be furnished with colored, heat-resisting lenses in place of the clear glass lenses, for an addition of \$3.00.

Color screens can be obtained for lenses having a diameter of 12, 14, or 16½ inches.

## Wheeler Meteor Floodlights

An efficient and dependable style of open type floodlight. Reflector is constructed of porcelain enameled steel. Supporting hoods are separable from reflector necks, permitting any of the various bracket assemblies to be put in place without the necessity of handling the complete fixture. All cast parts are made of aluminum with the exception of the base of the pipe clamp assembly which is cast iron.

**Auxiliary Interior.** An auxiliary interior is available for attaching to the inside of the reflector. Made of aluminum with a special diffused ALZAK aluminum reflecting surface. Designed to build up the illumination in the area farthest from the unit.

**Finish.** Porcelain enameled light blue outside, white inside. Hoods retain their natural cast aluminum finish.

2553	18.00	21½x15¼	22¼	750-1500

\*Tapped 1-inch when specified.

When specified, can be furnished with a diffused ALZAK aluminum inner reflector at an increase of \$3.60 in price.

## Benjamin Ellipto-Lite Play-Area Floodlights

No. 5977

A wide angle, open type reflecting reflector for floodlighting recreational areas, playgrounds, parking lots, etc. Weatherproof.

Four types of hood; pendent for attaching directly to threaded pipe; with cross arm bracket for fastening to flat surfaces; with cross arm and pipe clamp for attaching to 1 to 2-inch pipe; or slip fitter to slip over 1½ or 2-inch pipe.

Fittings not aluminum, are electro-plated.

## With Pendent Hoods

Hood tapped ¾ inches standard; 1 inch, if specified.

## For Bi-Post Lamps

Floodlight can be supplied with holder for 1000-watt, medium Bi-post, hard-glass lamp. To order, prefix number with BP and add \$2.00 list (with Saffox add \$2.50). A length of No. 12AF nickel fixture wire is included (except Saffox).

\*Slips on 2-inch iron pipe mast.

## Benjamin Duo-Service Floodlights

For 750, 1000 and 1500-Watt Lamps

No. 5763

Used for lighting gasoline service stations, super-service stations, roadside inns, etc.

Porcelain enameled steel reflector, regularly supplied green outside, special diffusing surface white inside. When specified, choice of red or white outside, without extra charge.

Has No. 2772 one-piece, mogul base receptacle, with improved finger type lamp grip.

All fittings not aluminum are electro-plated to resist corrosion.

CLOSED WIRING, SLIP FITTER mounting bracket has wires completely enclosed and protected from receptacle through to pole. Bracket slips over the end of a 1½ inch iron pipe mast; also available for 2 inch pipe. Horizontal and vertical adjustments have degree marking graduations.

OPEN WIRING, CROSS ARM mounting bracket has separable hood with weatherproof wire entrance bushing which can be replaced with standard BX connector. Fits standard 4¼ inch arms and any flat surface. Horizontal and vertical adjustments have degree marking graduations.

## With Concentrating Beam Inner Projector

Has efficient, highly polished aluminum reflecting surface producing a narrow, concentrated, high intensity floodlight beam.

No.	Description	Ship. Wt., Lb. Each	Each	Inner Projector Each
5763	Fits 1½-Inch Iron Pipe Mast.	35	\$36.00	\$6.00
*27563	Fits 1½-Inch Iron Pipe Mast.	50	50.00	6.00

5936	With Cross Arm Bracket. . . .	35	32.50	4.50

## For Bi-Post Lamps

Floodlight can be supplied with holder for 1000-watt, medium Bi-post, hard-glass lamp. To order, prefix number with BP and add \$2.00; for Saffox add \$2.50 list.

\*Furnished with Saffox attachment.

## Benjamin Play-Area Floodlights

With Inner Auxiliary Reflectors

For 750, 1000, and 1500-Watt Lamps

No. 5751

An open type, wide angle, diffusing floodlight designed for lighting railroad yards, docks, loading platforms, construction projects and outdoor sport areas. Provides uniform, strong illumination on the ground area to the front and sides of the unit. Includes an Alzak aluminum auxiliary reflector.

Available in 3 types of mounting brackets: Open-wiring cross arm bracket for, attaching to wood cross arms and other flat surfaces; cross arm with pipe clamp for clamping around 1 to 2-inch iron pipe; closed-wiring slip fitter bracket for fitting over end of 1½-inch iron pipe mast; also available to fit over 2-inch pipe. Reflector is 28½ inches long, and 17½ inches wide.

Porcelain enameled reflector, green outside, white inside. Bracket arm, reflector neck, pipe clamp, etc., are cast iron; finished to resist corrosion.

## Open-Wiring—Cross Arm Bracket Type

No. 5751 with Cross Arm Bracket.....each	\$29.00
No. 5754 with Cross Arm Bracket and Pipe Clamp.....each	30.00

## Closed-Wiring—With Slip Fitter Bracket

No. 5752, for 1½-Inch Pipe.....each	\$31.00
No. 5752A, for 2-Inch Pipe.....each	31.00

## Benjamin Column-Lite Fixtures

No. 5681

One-piece, seamless, porcelain enameled steel reflector. Regularly supplied green or red outside, special diffusing white inside to reduce glare from specular reflection. When specified, on special order, fixtures can be supplied in white, blue, yellow, gray, or cream; prices on request.

Shock-absorbing socket to protect lamp filament against shocks and vibration. A shock-absorbing spring, permanently attached to

socket supporting strap, floats the one-piece porcelain, listed by Underwriters, standard socket which has easy-to-wire, side terminal screws.

Slip fitter bracket of cast iron is first electro-plated and then finished in sprayed aluminum. Slip fitter fits over end of unthreaded 2-inch iron pipe mast and is locked in place by 2 large, rugged set-screws.

Supplied without shielding ring.

Lamp Watts	No.	Each	Outside Reflector Finish	Diam. In.	Ht. In.	Ship. Wt. Lb.
*150, 200	5680G	\$15.00	Green	18	19½	21

300, 500	5681R	15.00	Red	20	21⅞	25

\*For 150-watt lamps, use socket extension No. 91 to correctly position lamp in reflector. Sockets for replacement, No. 44, medium, No. 244, mogul.

## Benjamin Variety-Lites

For use about the home and business establishment. Indoors, it is ideal for lighting furnace rooms, laundries, stairways, store-rooms and attics. Outdoors, for porches, garage approaches, gardens and play-areas.

The porcelain enameled steel reflector is not affected by heat or dampness and is easily cleaned. Reflecting white inside, gray outside, with black bead. Has snap-in type, etched aluminum inner reflector.

Cast iron reflector cap and steel bracket; finished in blue lacquer over galvanizing. Steel bracket band is electro-plated.

Unit can be quickly attached to any flat surface by first installing the two No. 10 round headed wood screws furnished and then slipping the key hole slots of the bracket over them.

Supplied wired, with 6 feet of rubber service cord and rubber plug.

Packed 1 in a standard package.

\*Medium base lamp.

Prices do not include lamps.

## Benjamin Service-Lites

A handy, telescoping and portable work light that can be easily moved from place to place and quickly adjusted to any desired height from 9 to 72 inches above the floor. At any point in this adjustment, the reflector can be tilted up or down through a wide angle to direct the light where it is needed.

The lower section of the telescoping shaft is iron pipe, upper section steel tubing. Ornament, cord hook, shafts and clamps are electro-plated.

Cast iron base with 18-inch diameter, and four ½-inch diameter holes equally spaced in rim for screws or casters. Galvanized; finished red.

Fixtures are wired with 25 feet of rubber covered service cable. Two-wire cables have soft rubber plug; three-wire cables, less plug, have wires skinned and tinned.

Interiors sealed against dust and moisture by heat-resisting cover glasses and gaskets. Wire guard, welded to the cover band, protects glass. Guard and band heavily tinned. Clear cover glass in 75-100 watts; stippled in 150-200 watts.

Porcelain enameled reflector, white inside and green outside. Symmetrical

shape gives wide, even light.

Aluminum reflector has efficient, polished reflecting surface. Beam spread, 25° minimum to 60° maximum.

**Benjamin Alzo-Lite Long-Range Floodlights****For 750-1500-Watt Lamps****No. N6192**

A narrow-beam, open-type unit primarily designed for football field floodlighting from behind the stands when located 55 to 150 feet back from the sideline.

Reflector has bi-focal, compound, three-element projector of Alzak aluminum. Section behind the lamp is polished, while section in front is etched. Outside is baked aluminum enamel over Alzak.

Etched Alzak aluminum deflector, positioned above and in front of lamp filament to direct a portion of the light downward.

Skeleton type receptacle, with mogul base.

Diameter, 18 $\frac{1}{4}$  inches; height, 23 $\frac{3}{8}$  inches; and width, 12 $\frac{1}{2}$  inches.

Cross arm units supplied with a 26-inch length of No. 14 two-conductor AFS rubber covered cable; slip-fitter units have two 31-inch lengths of No. 14 solid AF wire.

Fittings, not aluminum are electro-plated.

**With Cross Arm Brackets**

Fits 4 $\frac{1}{4}$ -inch standard arms and all flat surfaces.

**Benjamin Alzo-Lite Medium-Spread Floodlights****For 750-1500-Watt Lamps****No. N6146**

A medium-spread reflector approximating a 90° beam designed for floodlighting baseball, softball, and football fields, etc.

Reflector has bi-focal, compound, three-element projector of etched Alzak aluminum. Exterior is baked enamel over Alzak.

Waterproof cover hinged to top of reflector and attached by spring clamps around the rim. Disc is clear, heat-resisting glass, specially gasketed and cemented and secured in cover frame by an internal expanding band.

Skeleton type receptacle, with mogul screw base.

Separable hood construction makes possible removal of reflector for cleaning or easier installation. Neck has water-tight joint at reflector with concealed attaching screws.

Diameter, 18 $\frac{1}{4}$  inches; height, 23 $\frac{1}{4}$  inches; width, 12 $\frac{1}{2}$  inches.

Cross arm bracket units supplied with 26-inch length of No. 14 two-conductor AFS rubber covered cable; slip-fitter units have two 31-inch lengths of No. 14 solid AF single conductor wire.

Fittings, not aluminum are electro-plated.

## Benjamin Utility Floodlights

150-200 Watts

No. 6011

For general purpose and decorative floodlighting jobs.

The interior surface of the sheet aluminum housing forms a highly efficient reflector. Concentrating units have durable, highly polished Alzak aluminum reflecting surfaces while spread type units have reflecting surfaces of etched, aluminum oxide. Diameter, 10 $\frac{1}{2}$  inches. Beam focusing mechanism is controlled by a single thumb screw on the barrel of the housing.

Units can be tilted up or down or turned in a circle.

Reflecting surfaces are sealed against dust and moisture by the heat-resisting cover

glass which seats against an impregnated asbestos gasket, held in place by a removable aluminum channel band.

Three styles of mounting provided by the two types of brackets. Pedestal base is cast iron and includes a removable steel spike for turf mounting. Also has slotted screw holes for surface attachment. Pipe bracket is cast iron, tapped  $\frac{1}{2}$  inch, with a weatherproof wire entrance bushing in the removable wiring plate.

Pedestal base and spike has a 5-foot, 7 inches rubber covered cord and plug cap; pipe bracket types have 15-inch pigtail for lead-in to bracket.

## Benjamin Utility Floodlights

300-500 Watts

No. S6023B

Weatherproof, durable, attractive appearing units of high lighting efficiency.

The interior of the sheet aluminum housing forms a highly efficient reflector. Concentrating type reflectors have highly polished Alzak aluminum reflecting surfaces while spread type reflectors have reflecting surfaces of etched Alzak aluminum. Diameter, 14 $\frac{1}{8}$  inches.

Projectors are of durable, weatherproof and dust-tight construction. Housings are of sheet aluminum, with both exterior and reflecting surfaces of durable Alzak aluminum. Wire entrance into the housing is weatherproof. Glass cover held in place by an aluminum channel band.

Colored lighting effects are obtainable through the use of glass color plates. These plates do not supplant the standard cover glass as they are set behind the regular cover.

Floodlights are wired and include 3-foot leads of No. 14 AFS rubber sheathed portable cord with tinned ends. Skeleton type receptacle, with mogul screw base.

Type B swivel and stand, is for attachment to any flat surface. Type D pipe clamp, attaches to 1 to 2-inch size iron pipe or  $\frac{1}{4}$  to 2 $\frac{3}{8}$ -inch tubing. Type E wall bracket is for wall attachment. Type H slip fitter is for mounting over the end of a 1 $\frac{1}{2}$ -inch iron pipe. Type K pipe bracket is to thread units to  $\frac{1}{2}$ -inch pipe standards, but can be furnished to fit  $\frac{3}{4}$ -inch standards, when specified. Type M cross arm is for attachment to standard  $\frac{1}{4}$ -inch cross arms.

\*Due to striae caused by filament images in polished reflectors, these units are not recommended.

WITHOUT COVER, available at a \$6.00 reduction in price of complete unit. For units without cover, use No. 6025 to indicate the concentrating type and No. 6024, the spread type unit. This number is to be suffixed in each instance with one of the six letters used above to indicate the bracket style desired.

## Benjamin Weatherproof Utility Floodlights 750-1000 Watts

No. P6032M

Weatherproof, durable, attractive appearing units of high lighting efficiency.

The interior of the sheet aluminum housing forms a highly efficient reflector. Concentrating type reflectors have highly polished Alzak aluminum reflecting surfaces while spread type reflectors have reflecting surfaces of etched Alzak aluminum. Diameter, 16½ inches.

Projectors are of durable, weatherproof and dust-tight construction. Housings are of sheet aluminum, with both exterior and reflecting surfaces of durable Alzak aluminum. Wire entrance into the housing is weatherproof. Glass cover held in place by an aluminum channel band.

Colored lighting effects are obtainable through the use of glass color plates. These plates do not supplant the standard cover glass as they are set behind the regular cover.

Floodlights are wired and include 3-foot leads of No. 14 AFS rubber sheathed portable cord with tinned ends. Skeleton type receptacle, with mogul screw base.

Type B swivel and stand, is for attachment to any flat surface. Type D pipe clamp, attaches to 1 to 2-inch size iron pipe or 1¼ to 2½-inch tubing. Type E wall bracket is for wall attachment. Type H slip fitter is for mounting over the end of a 1½-inch iron pipe. Type K pipe bracket is to thread units to ½-inch pipe standards, but can be furnished to fit ¾-inch standards, when specified. Type M cross arm is for attachment to standard 4¼-inch cross arms.

## Revere Adjustable Triangular Floodlights

No. 3086

Ideal for service station lighting. Casts a definite 90° beam pattern to provide efficient property-line cutoff lighting.

Light area is controlled by a head and telescopic arm, which provide vertical adjustment of 37° and a total horizontal range of 360°.

Head conceals all wiring. Clips hold wire secure and take all strain off socket terminals.

Reflector is made of Alzak aluminum. All castings are made of aluminum. Screws and fittings are made of either aluminum alloy, brass, or cadmium plated steel.

## Revere Show-Master Spotlights

For 150 and 300-Watt Lamps

No. 3175

For a multitude of merchandizing applications where efficient illumination of the product is desired.

No. 3175 is for floor or wall mounting and is furnished with a neatly designed base for mounting to horizontal or vertical surfaces. Cord and plug are furnished but not wired.

No. 3176 is for ceiling and wall mounting and is furnished with a standard outlet box cover.

Both types accommodate 150-watt par 38, 150-watt R-40, or 300-watt R-40 lamps.

Housing is made of spun aluminum with natural aluminum finish.

Concentric louvers are furnished to control the direct rays of the lamps used.

Diameter, 5 inches. Height, 11 inches.

## Revere Eliptor Floodlights

## Porcelain

300 to 1500 Watts

Easy to adjust, as all adjustments are made from one position on one side of the housing. Inner reflector is plated

semi specular finish, giving maximum projection and control.

Any of the 500-watt floodlights can be used with the 400-watt type base-burning mercury lamp. Care must be exercised in setting the floodlight, keeping lamp within 10° of vertical.

Porcelain enamel steel reflector, white inside and

red, green or blue outside finish. Other colors available.

### Revere Enclosed Type Floodlights

150-200, 300-500, and 750-1000 Watts  
Dust-Tight—Weatherproof

No. 7100

Bracket for Wall or Wood Pole Mounting

Slip Fitter

Clamp

Flat Base

Standard Base

Made of spun sheet aluminum with cast aluminum neck and socket mounting. A separate removable aluminum casting is used for the mounting of the socket and focusing mechanism.

Hermetically sealed by an impregnated asbestos gasket attached to the ring.

Focusing mechanism is furnished as standard on narrow beam type only. If desired, mechanism can be furnished for fixed focus.

Plain lens is used where it is not desired to change the characteristic of the beam. A stippled lens is used where a wider spread of light is desired and the ribbed lens is used when an oval pattern is desired.

## Revere Economy Line Floodlights

75-100, 150-200, and 300-500 Watts

Weatherproof

Wide Beam—Narrow Beam

No. 5917WP

Made of aluminum with Alzak finish throughout.

Supporting yoke is attached to a clamping ring which encircles neck of the reflector.

Reflector is held in position by wing nuts which permit adjustment in any direction.

Flat base illustrated is of the outlet box cover type, fitting a standard 4-inch square box.

Enclosed type is equipped with lens ring and may be used for indoor or outdoor applications.

Cord grip is furnished for  $\frac{3}{8}$ -inch O.D. cord. Cord is not furnished.

## Revere Incandescent Searchlights With Pilot House Control or Hand Control

250 to 5000 Watts

Designed for ordnance and industrial plants, airports, bridges, arsenals, marine use, and other protective lighting applications.

Wattage capacity: 12-inch, continuous service 600 watts, intermittent service 1000 watts; 18-inch, continuous service 1500 watts, intermittent service 2000 watts; 24-inch, continuous service 1500, 2000, or 3000 watts, intermittent service 5000 watts.

The 12 and 18-inch sizes are made of heavy gage spun steel and the 24-inch is made of cast aluminum.

Reflector is precision mirrored glass, ground and polished.

Has heat resisting plain clear glass lens.

Searchlight mounted in a steel yoke which permits vertical rotation.

**Pilot house control** type is made to swing a full 360° horizontally, with vertical adjustment to enable tilting the searchlight to 45° above or below horizontal. Permits searchlight to be mounted on roof of guard tower, or other building with control lever extending down through the roof.

**Hand Control** type is of the same construction as the Pilot House Control type, except for the mounting and control equipment.

**Finish:** 12-inch and 18-inch finished in standard dark green enamel; 24-inch finished standard aluminum except for Airport Service which is international orange and white or black and yellow striped.

## Revere Service-Lite Lighting Units For 100 or 200-Watt Lamps

No. 3002

Designed for efficient illumination of hoists, greasing pits, washracks, underpasses, tunnels, railroad train-pits, etc. The main body of the unit is a one-piece casting. The lens is of the refracting type ¾ inches thick, and is made of special heat-resisting glass, designed to cast light on an angle of 40°.

A clear glass lens is also available.

Furnished in hinged and non-hinged types. An Alzak aluminum reflector inside the housing is furnished.

A medium screw base receptacle is fixed in position for a 200-watt lamp. If a 150-watt lamp is to be used, a standard socket extension should be added.

Revere Combination Island Lights and Floodlights

With Alzak or Porcelain Reflectors

200 to 1000 Watts

Used for service station lighting and other areas where efficient illumination is a necessity.

All castings are aluminum and other parts are cadmium plated steel.

Slips over a 2-inch pipe and is secured by two set screws. Bosses provided in the lower fitter align and maintain unit vertical.

No. 3650-S  
Combination Area Light  
and 3 Top Floodlights

Nos. 3018 and 3481  
20-Inch Reflector

Nos. 3017 and 3480—Alzak  
Nos. 3018 and 3481—Porcelain

Rain and weatherproof.

Wireway is located in both arms, therefore wiring is enclosed. Ornamental ball top which, when removed, exposes a 1/2-inch threaded nipple on which enclosed floodlights (Nos. 3160, 3166, 3180, and 3186) and various lighted signs can be mounted.

Alzak reflectors have natural aluminum finish.

Porcelain reflector has red, green, or blue outside standard finish.

No. 3032—Porcelain  
No. 3033—Alzak

Smaller lighting units used where a location justifies a 200-watt lamp instead of the customary 300 or 500-watt lamp.

Normally, two units should be used with the pole installed crossway of the island.

Reflector is made of Alzak aluminum or porcelain enameled steel.

Porcelain reflector is finished white inside, red or green outside.

## Revere Enclosed Low Mounting Floodlights and Top Floodlights

No. 3454D

For use with No. 3018 island light.

Housing is made of porcelain enameled steel. The mounting device is made of aluminum.

Available with or without an Alzak inner reflector and for wide or narrow beam spread. Inner reflector is held in place by means of two screws.

Lens is held to reflector by means of a clamping ring.

For 150 to 200-watt lamps, a medium base socket is used. When using a 150-watt lamp, a standard socket extension should be inserted.

For 300 to 500-watt lamps, a mogul screw socket is used.

Vertical adjustment is obtained through the hollow swivel joint, which accommodates the wiring.

Reflectors furnished in red or green porcelain outside, white inside.

**No. 3018 Island Light.** A rain and weatherproof unit which accommodates 300 to 500-watt lamps. Castings are made of aluminum and other parts are cadmium plated steel. Reflector is porcelain enameled red or green outside, white inside. Slips over a 2-inch pipe and is secured by two set screws. Has ornamental ball top which, when removed, exposes a 1/2-inch threaded nipple on which enclosed floodlights are mounted.

## Revere Service and Island Light Standards

No. 204

Plan of Base

Cross-Section of Base

Cross-Section of Concrete Mounting

For use on pump islands and other areas in combination with island lights.

Light center of island light is approximately 12 feet above the grade line.

Available with or without air and water dispensing facilities.

Lower section is a 5-inch corrugated steel tube, with an ornamental steel reducer casting welded in place for screwing on the upper shaft which is made of 2-inch steel pipe.

Water and air pipes are furnished with elbows, nipples, and ground joint unions.

Piping is welded in place in the standard, ready to connect to the service piping through a large door near the grade line. Hose and hose fittings are not furnished.

Switch and receptacle are not furnished and must be ordered separately. When ordered with standard, drilling and tapping are furnished without extra charge.

Lights and foundation bolts must be ordered separately.

## G-E Heavy Duty Floodlights

## Type L-38

Type L-38-D, for General Service Lamp, 200-250 Watts

Plain door glass is furnished, unless otherwise specified. The following types are available at no additional charge: lightly stippled, heavily stippled, and spreadlight—used to widen beam light. Colored glass can be obtained, if desired.

## Type L-38-D, for General Service Lamp (PS-30)

No.	Each	Type of Reflector	APPROX. Wt., Lb.	Net
A48G42	\$38.00	Silvered Glass	22	16
A48G62	38.00	*Alzak Finished Aluminum	22	16
Type L-38-E, for Floodlighting Service Lamp (G-30)				
A48G52	\$38.00	Silvered Glass	22	16
A48G72	38.00	*Alzak Finished Aluminum	22	16

## Type L-34

Types L-34-E and H for General Service Lamp, 1000-1500 Watts

Plain clear door glass furnished, unless otherwise specified. Lightly stippled or spreadlight door glass can be furnished at no additional charge.

Furnished only with crowfoot base as shown.

In Type L-34-E, the lamp is supported at 90 degrees to the reflector axis. In Type L-34-H, the lamp is supported at 60 degrees to the reflector axis, to obtain more favorable lamp performance when operated at over voltage and when the projector is tilted downward.

## For General Service Lamp (PS-52)

\*Manufactured under Aluminum Company of America patents.

A heavy duty floodlight with cast aluminum casing and door. High efficiency, long life reflector, either silvered glass or Alzak processed aluminum. Heat and weather-resisting molded glass sealed with waterproof asbestos gaskets.

Suitable for rough service applications—such as on power shovels. A variety of beam spreads and mountings adapt it to all common situations.

Lamp is not included.

Plain door glass is furnished, unless otherwise specified. The following types are available at no additional charge: lightly stippled, heavily stippled, and spreadlight—used to widen beam light. Colored glass can be obtained, if desired.

A heavy duty cast aluminum floodlight, for use with either general service lamp or floodlight service lamp, specially designed and built for railroad yard lighting. Its strong durable construction assures long life—withstanding vibration and corrosive action of smoke filled air.

Also recommended for long range floodlighting of large stadiums.

Lamp not included.

\*Alzak finished aluminum reflectors only are furnished for sports lighting use.

## Type L-30

Type L-30-K or L Standard Floodlight, 300-500 Watts

er-resisting molded glass held in place with large spring toggle latches to insure tight seal. Attractive gray enameled finish.

Lamp is not included.

Plain door glass is furnished, unless otherwise specified. The following types are available at no additional charge: lightly stippled, heavily stippled, and spreadlight—used to widen light beam. Colored glass can be obtained, if desired.

## G-E Area Floodlights

Type L-69

Type L-69 Floodlight for Crossarm Mounting, 1500 Watts

An outstanding floodlight for sports field and recreation areas incorporating every worthwhile feature, from the results of long engineering experience. The floodlight features a front glass made of impact-resisting Tufflex tempered plate glass, spun sealed into the reflector. The socket housing is removable for replacing lamp and cleaning reflector. Die-cast aluminum construction makes the housing lighter and easier to handle than any front door assembly. The reflector is made of \*Alzak processed aluminum, either polished or etched, giving this floodlight ideal light control and outstanding beam efficiency. The floodlight is completely sealed to keep out water, dirt, and insects.

Lamp not included; use 1500-watt general service lamp. PS-52 clear bulb, 9½-inch light center length.

No.	Each	Type of Reflector	APPROX. Wt., Lb. Ship. Net

Type L-68

Type L-68 Floodlight for Crossarm Mounting, 750-1500 Watts

A popular floodlight for ground areas, notably sports fields and construction projects, where high candlepower beams will help reach across the area, or where the maintenance savings of an enclosed unit are desired. Features a heat and weather-resisting molded plain glass mounted in a slide-on door with a large handle and safety chain, for easy servicing. Reflector is made of \*Alzak processed aluminum, either polished or etched, to widen the light beam. Die-cast aluminum socket housing with heavy duty porcelain shell mogul socket keeps lamp in fixed focus. A medium stippled door glass is available.

Lamp not included. Uses general service lamp. Plain door glass is furnished, unless otherwise specified. A medium stippled type is available at no additional charge. It is used with either polished or etched reflector, to widen the light beam.

Type L-68, Enclosed, for Crossarm Mounting

\*Manufactured under Aluminum Company of America patents.

†For use with 300 or 500-watt lamp, order similar to above number, and deduct \$1.00.

Type L-46

Type L-46 Floodlight for Crossarm Mounting, for 300-1500 Watts

A durable open floodlight for close range illumination of filling stations, and work, storage, parking, and sports areas. This floodlight has a porcelain enameled reflector. It may be equipped with an auxiliary reflector, to provide increased illumination of areas or buildings that require special emphasis. Die-cast aluminum socket housing with heavy duty, porcelain shell, mogul socket. Used general service lamp. Lamp not included.

## G-E General Purpose Floodlights

## Type L-49

Type L-49 Floodlight with Oval Base, 300-500 Watts

A lightweight floodlight for general application, which with narrow beam or wide beam reflectors, plus a variety of mountings, meets all common requirements. Reflector is made of \*Alzak processed aluminum; either polished for narrow beam or etched for wide beam. Heat and weather-resisting molded glass held in place with an aluminum ring. Die-cast aluminum socket housing with mogul socket. Lamp is not included. Plain door glass is furnished, unless otherwise specified. A heavily stippled type is available at no additional charge. Colored glass can be obtained, if desired.

## G-E Handy Floodlights

## Type L-65

Type L-65 Handy Floodlight, 100 Watts

A handy floodlight with wide angle beam, for lighting around homes, gardens, garages, farm buildings, etc., offering convenience, protection and aid to work or business at night. Low cost, durable and compact, and has a large variety of uses. Reflector is constructed of one-piece die-formed aluminum etched on the inside. Weather-resisting molded door plain glass held in place by U-shaped band. A 150-watt lamp may be used for short burning periods.

Lamp not included.

Packed 6 in a standard package; approximate weight, shipping, 22 pounds; net, 10½ pounds.

Type L-65, (No. A168G1).....each \$3.95

## Type L-66

Type L-66 Handy Floodlight, 200 Watts

For work lighting or protective lighting around substations, home and farm buildings, construction jobs—either temporary or permanent. Powerful wide angle beam illuminates a large area. Inexpensive, durable, thoroughly practical for general use. Reflector constructed of die-formed aluminum with etched inner surface. Heat and weather-resisting molded clear glass held in place by U-shaped clamping band with gasket. A 300-watt medium base general service lamp can be used in intermittent service.

Lamp not included.

Approximate weight, shipping, 7 pounds; net, 4 pounds.

Type L-66, (A175G4).....each \$12.50

No. 4815510G1, Renewal Door Glass, Plain Clear, 9½-Inch Diameter.....each \$2.70

For omission of door glass and ring, deduct \$4.00.

Red, amber, blue, or green door glass furnished in place of clear at \$4.00 additional.

## G-E Form 92 Luminaire for Gasoline Pump Islands

300-500 Watts

An attractive enclosed type luminaire for lighting gasoline pump islands and surrounding areas. Fits 2-inch pipe. Easily installed, offering even distribution of light without objectionable glare. Reflector constructed of \*Alzak processed aluminum which snugly fits over strong crystal clear rippled glass globe, giving an attractive appearance. Sturdy galvanized cast iron base, heavy duty porcelain mogul base socket.

Lamp not included. Use 300 or 500-watt mogul screw base lamp.

Approximate weight, shipping, 20 pounds; net, 14 pounds.

Form 92, (No. A100G1).....each \$14.00

\*Manufactured under Aluminum Company of America patents.

## G-E Underwater Floodlights

## Type L-39

Type L-39 Underwater Floodlight,  
500-1000 Watts

This high quality dry-niche underwater floodlight is used principally in swimming pools. It offers high efficiency, a variety of beam angles, easy maintenance, and long life. Cast bronze construction is especially recommended for best results and should be used to prevent deterioration in chemically treated water. Strong, durable, and easy to install.

Highly efficient silvered glass or polished \*Alzak processed aluminum reflector, correctly positioned for best results.

## Crouse-Hinds Incandescent Searchlights

Types DCE, DCY, DCX and DCXR

Type DCX

Type DCE

Type DCY

Designed to project a concentrated high intensity beam of light for long range illumination. Particularly recommended for shipboard use, industrial plants, airport control towers, public utilities, ordnance plants, and prisons.

A complete line, ranging from the 8-inch, 250-watt searchlight, to the 36-inch, 5000-watt searchlight. Available with a number of different mounting bases for different applications.

**Type DCE** is used as a fixed searchlight for spotting objects or small areas from a distance. This type can be used as a hand-controlled searchlight, but where unit is to be frequently redirected, type DCY is recommended.

**Type DCY** is arranged for direct hand control. Pedestal provides height of 48 inches to light center. Pedestals of special heights can be furnished.

**Type DCX** is furnished with a pilot house lever control for mounting on the roof of a pilot house or watch tower, to be controlled from below. Automatic brake holds searchlight in position desired in both rotation and elevation when brake lever is released. Brake release lock allows free control when desired.

**Type DCXR** is similar to type DCX, except that it is arranged for remote control by means of wire ropes and pulleys.

## Crouse-Hinds Aviation Lighting

Type DCB-36 Rotating Beacons

36-Inch Diameter

A rotating beacon of high efficiency which projects beams of light in two directions, 180° apart.

The optical system consists of a lens combination in each end of the housing, with a single lamp in the center.

Each combination consists of an 18-inch inner doublet lens and a 36-inch outer lens. The outer lens is made of a one-piece bulls-eye lens, 20 inches in diameter, surrounded by twelve 30° sectors of an annular ring.

When color is required in either or both ends of the beacon, the inner doublet lens is furnished in red or green.

Equipped with one end clear and one end green, 115 volts, 60 cycles A.C.

No. 41281.....each .....

Type DCB-10 Rotating Beacons

Designed to meet requirements of small airports with no regular scheduled air transport activities. Provides alternate clear and green flashes from an optical system rotating at 6 rpm, indicating the location of a lighted airport with same beam characteristics as standard Type DCB-36 airport beacon.

Constructed with a large Pyrex glass dome which completely encloses rotating optical system.

A magnetic lamp changer provides a spare lamp which is automatically moved to the correct focal position and switched on when the first operating lamp fails. An indicating circuit is included which may be wired to an indicating lamp on the beacon tower, in the control room, or any remote point to show failure of the operating lamp. For 115 volts, 60 cycles, A.C.

No. 44035.....each .....

Type DCE-24 Airport Floodlights

1500 or 3000 Watts

Designed for the illumination of large landing fields. Can be used in banks of from three to fourteen units with the beams overlapped for the illumination of level fields, or in groups of two at each end of each runway for runway floodlighting.

Main reflector is 25-inch diameter, parabolic, silvered glass.

## Crouse-Hinds Aviation Lighting

## Type FCB-12 Fresnel Beacons

For Airport Identification and Hazard Marking  
200 or 500 Watts

Designed for use as an auxiliary green code flashing beacon at airports, and as a red marker light for major obstructions to air navigation.

When used at airports, it is usually equipped with green color screens, two 500-watt lamps, and connected to a special code flasher to produce a Morse code signal, designating the airport. Code signal consists of from one to three letters, and must be approved by the Civil Aeronautics Administration. Should be mounted high enough to allow its beam to clear surrounding obstacles.

Housing is cast aluminum alloy.

Lamps: 500-watt, 115-volt, PS-40 bulb or 200-watt, 115-volt, PS-30 bulb, mogul prefocus base.

Description	200 Watts		500 Watts

## Type TSS Flashing Switches

110 Volts, 60 Cycles, A.C.

Used to flash on-off signals as required for Type FCB-12 red hazard beacons, and to flash code signals as required for Type FCB-12 green airport identification beacons.

All Type TSS standard flashers are arranged to flash on-off 40 times per minute in accordance with CAA requirements for hazard beacons. Type TSS-18 (No. 46397) code flasher is furnished with the cam made to order to flash the code assigned to the airport by the CAA. The code flasher will flash most two-letter codes and some three-letter codes.

Contacts of Type TSS-21 are mercury tube, rated 35 amp. Contacts of Type TSS-18 are metal, rated 10 amperes.

## Type APB Boundary and Threshold Lights

Disconnecting Type

Fixture consists of prismatic globe, cast aluminum fitting, 30° diameter metal cone and disconnecting cutout. Function of cutout is to disconnect fixture immediately from the high voltage underground cutout when struck by a plane.

Available for 6.6-ampere series circuits and for 115-volt multiple circuits.

## Type ERL Marker Lights

For use on both large and small airports as runway lights (clear globe), threshold lights (green globe), and taxi lights (blue globe). Globes are available in both asymmetric style as used on runway and threshold lights and symmetric style as used for taxi lights at some locations.

Complete ERL fixture includes globe, fitting with lamp receptacle, cone, column with breakable coupling, wiring in column, disconnecting plug and receptacle, and mounting base.

Mounting bases are available in three different styles designated as A, B, and C. Style A mounting consists of surface flange, 30-inch angle iron anchor, and isolating transformer; Style B mounting includes base plate and gasket to fit type CPD base housings; Style C mounting consists of junction box with hub cover on top and two squeeze connectors for through-feed cables at bottom.

New runway marker light installations use Style Amounting in most cases, with a series circuit and an individual isolating transformer for each light. Style C mounting with 115-volt multiple circuit is also used. Style B mounting is used particularly where it is desired to provide for a change-over to semi-flush CPD top assemblies. At some airports cone type markers such as Type ERL are used during snow weather, these being replaced on the base housings by Type CPD top assemblies during the summer. Type ERL with Style B mounting is used for converting existing semi-flush CPD fixtures to elevated lights.

## Type HIRL Marker Lights

200 Watts

Type HIRL, 200-watt high intensity runway marker light is recommended for instrument landing runways.

Outlines a runway to a pilot under poor visibility conditions as encountered in fog, rain or snow, either day or night.

High lighting efficiency is obtained through the use of a double reflector system with a single light source.

Consist essentially of the reflector optical system, column with breakable coupling, wiring with disconnecting plug and receptacle, and base housing. An isolating transformer is required to be installed in the base.

Description	No.	Each
Clear Runway Marker Light.....	44382	.....
Green Threshold Marker Light.....	44383	.....

Catalog Nos. do not include incandescent lamps. Prices and information upon request.

## Crouse-Hinds Aviation Lighting

## Type WC Illuminated Wind Cone Fixtures

**Type WC-36 wind cone** is new heavy duty fixture equipped with a 36-inch diameter 12-foot fabric wind sock.

**Type EC-18 wind cone** is designed particularly for use at small airports. Also recommended as an auxiliary wind cone at larger airports.

Both Type WC-36 and WC-18 fixtures include ball bearings for the wind cone swivel support and four lighting reflectors, which are 200 watts for Type WC-36 and 150 watts for Type WC-18.

Type WC-18 with 2-Inch Slip Fitter Base...	44036	....

## Type WT Illuminated Wind Tees

Serves as a continuous day and night indication of the true wind direction, gives the appearance of a single green "T" when viewed from above at night and a single stroke chrome yellow "T" when viewed from above in the daytime.

Furnished as a standard wind tee responsive to and affected by the wind only, or can be furnished with any of several different combinations of accessories to make it completely automatic or controlled by a remote operator. No. 43339C.....each .....

## Type DCE-16 Ceiling Projectors

Consists of a powerful searchlight, the beam of which is directed upward to the clouds. The height of the clouds is then determined by an indicator known as a clinometer. Projector is usually located 1000 feet from the normal observation point.

No. 43900, with Transformer and Slip-Fitter...each .....

## Type CL Clinometers

Furnished complete with wood box, instructions, and a set of tables with altitudes for base line of 100 feet.

No. 44173.....each .....

Catalog Nos. do not include incandescent lamps. Prices and information upon request.

## Wind Instruments

Wind Transmitter Assembly

These instruments provide instant information on outside wind conditions to the operator in the control tower, hangar or office.

**Wind direction transmitter** consists of a balanced metal arrow and a self-synchronous motor assembly totally enclosed in a weatherproof housing. Mounts on standard 1¼-inch pipe support.

**Wind velocity transmitter** is a wind-powered type, consisting of a 3-cup rotor which drives a high grade direct current generator, totally enclosed in a weatherproof housing. No outside power source is needed. Mounts on standard 1¼-inch pipe support.

**Wind indicator** is 3½-inch outside diameter with 2¾-inch luminous aircraft dial.

**Wind transmitter assembly** consists of the two transmitters, duplex pipe support, and double obstruction light. Transmitter support has slip-fitter for 2½-inch pipe.

VAW Double Obstruction Light, Red Globes.....	43961	....

## Type PTS Air Traffic Control Signals

Designed for projecting a high intensity beam of light for clear, green or red signals to planes in the air and on the ground.

By means of concentrating type parabolic searchlight reflector, a powerful beam is produced which has been used to signal at distances of over eight miles in the daytime and twelve miles at night.

Pistol grip handle at the rear contains a trigger switch with which the light signals can be flashed as desired. Signals in Morse Code can be flashed. Front handle is rotated to change the color of the base.

The B-2 assembly is the type generally provided for airport control tower use. The B-3 assembly includes a carrying case and spare parts.

## Crouse-Hinds Aviation Lighting

## Type VAW Marker Lights

Double Disconnecting  
Fixture With Thompson  
Hanger

Single Fixture

Double Fixture

Transfer Relay

Used as boundary lights (clear globe), threshold lights (green globe), and obstruction lights (red globe). Fixtures with yellow or blue globes can also be furnished.

Made of cast aluminum with 1-inch bottom hub. Available in two styles: multiple units for use on standard 115-volt circuits and series units for use on 6.6-ampere series circuits.

Transfer relay is designed to complete the circuit to the spare lamp upon failure of the operating lamp. Relay listed will operate with 60 or 100-watt lamps; relays for other lamps can be furnished. Relay is mounted in weatherproof housing.

Double disconnecting fixtures are used to mark obstructions to air navigation such as poles, towers, smoke stacks and water tanks where it is desirable to lower the fixtures for cleaning and relamping.

## Type CPD Flush Marker Lights

Type CPD  
With Shallow BaseType CPD  
With Deep Base

Used as runway contact lights, flush threshold lights, flush boundary lights, taxi guidance lights, and flush traffic control lights.

Designed to withstand a minimum dead load of 100,000 pounds applied on the top. Type CPD bases with blank iron cover are used as underground transformer housings.

Type I units are equipped with asymmetric style prismatic lens. Most of the light from an asymmetric unit is concentrated into two narrow beams approximately 180° apart and 4° above the horizontal, which for contact lights is directed up and down the runway to provide a high intensity indication toward a plane landing on the runway.

Type II units are equipped with symmetric style prismatic lens. The light distribution is symmetrical throughout the full 360° in the horizontal plane.

## Airport Control Desks and Panels

Airport Control  
DeskType CPV  
PanelType CPH  
PanelWind Transmitter  
AssemblyType CPS  
PanelType CPF  
Panel

The airport control desk provides the airport operator in the control tower with (1) convenient centralized control of all lighting circuits at the airport; (2) indicating devices for giving wind direction, wind velocity, barometric pressure, outside air temperature, and time; (3) desk space with drawer for records.

Types CPV and CPH panels include a facsimile map, wind instruments, and control switches for all lighting equipment. Type CPV is arranged for wall mounting and Type CPH, with sloping top, is designed for table or shelf mounting.

Types CPS and CPF primary control panels are simple and compact and provide a means for controlling the basic lighting circuits. Type CPS is for shelf mounting. Type CPF has a flange for flush mounting.

Type I panels provide control for runway marker lights. Type II panels provide control for runway marker lights, runway floodlights, and approach lights. Type III panels are designed for airports with dual runways.

## Crouse-Hinds Complete Lighting Sets for Small Airports

Rotating Beacon

Runway Marker Light

Illuminated Wind Cone

Single Obstruction Light

Ceiling Projector

Traffic Signal Gun

Wind Direction and Velocity Instruments

Double Obstruction Light

Control Panel

Clinometer

The Crouse-Hinds line includes everything in airport lighting for the small airport. This equipment is designed to meet the requirements of the Civil Aeronautics Administration. It is an easy matter to prepare a complete material list for any particular airport lighting installation by checking the requirements of the airport against the basic and supplementary material lists.

**Basic Material List.** Covers the basic lighting materials for an airport, including the rotating beacon, illuminated wind cone, and runway marker lights.

**Supplementary Material List.** Covers additional airport lighting items such as obstruction lights, ceiling projector, etc., wanted for ultimate installation in most cases.

**Runway Lighting Sets.** Includes runway and threshold lights, lamps, and enough cable to connect fixtures around edge of runway. One set should be ordered for each runway. Cable for connecting runway loop circuit to regulator supply is not included in these sets, and is specified separately in basic material list. Sets are designed for lighting unpaved strips, using two rows of lights spaced 150 feet apart. However for strips of greater width or different dimensions, lighting sets can be altered as required.

**Rotating Beacon.** Constructed per CAA Specification L-801 with cast aluminum housing and clear Pyrex glass dome enclosing optical system and rotating mechanism. Projects one clear and one green beam 180 degrees apart which rotates at 6-rpm capacity. Has automatic lamp changer with spare lamp. Beacon is visible at night from any angle above the horizon with either main operating lamp or spare lamp burning. Tell-tale circuit provides indication of failure of operating lamp.

**Wind Cone Fixture.** Constructed per CAA Specification L-807. Cone is externally lighted with four 150-watt reflectors. Includes 60-watt obstruction light; 18-inch nylon wind sock rotates on heavy-duty enclosed ball bearings around main vertical support. Fixture is installed on hinged pole for easy reclamping and servicing.

**Runway Marker Lights.** Constructed in accordance with CAA Specification L-802, to meet new airport lighting requirements for elevated fixtures. For use on both large and small airports as runway lights (clear globe), threshold lights (green globe) and taxi lights (blue globe). Globes are available in both asymmetric style, as used on runway threshold lights, and symmetric style as used for taxi lights at some locations.

Complete fixtures include a globe, fitting with medium pre-focus lamp receptacle, cone, column with breakable coupling, wiring in column, disconnecting plug and receptacle and mounting base. The column is standard 1-inch thinwall conduit. Height of fixture can be varied from 16 inches to 30 inches above ground level to meet local snow conditions. Breakable coupling at the bottom of the column is designed

to withstand static loads from high winds or propeller blasts but will break when struck horizontally with an impact of two foot-pounds or more.

**Control Panel.** Consists of steel cabinet with sloping top. Provides control for the basic airport light circuits, including runway and brightness selection, and 10 circuit breakers for other lights. Flush mounting panel with flange cabinet may be furnished.

**Obstruction Lights.** Standard AN-L-10 type either single or duplex with red prismatic globes, cast aluminum fitting, and medium screw lamp receptacles for 60 or 100-watt lamps. Fittings have 1-inch bottom conduit hub.

**Traffic Signal Gun.** Standard type used by CAA and Army Air Corps. Projects a high candlepower beam visible for 10 miles in the daytime and 15 miles at night. Has 8-inch diameter searchlight type parabolic rear reflector. Front handle changes beam to clear, red or green as desired. Signaling is done by means of rear trigger switch.

**Ceiling Projector and Clinometer.** Projector is stationary vertical type constructed as required by U.S. Weather Bureau and Army Signal Corps Specifications. Projector utilizes 420-watt, 12-volt lamp. A 115-volt transformer is included in cast metal base housing. Clinometer measures angle of light spot on cloud layer for calculation of ceiling height.

## Runway Lighting Sets

## Quantities of Materials and Kw. Load for Runway Sets

See Items 8A through 8D in Basic Material List for description of materials.

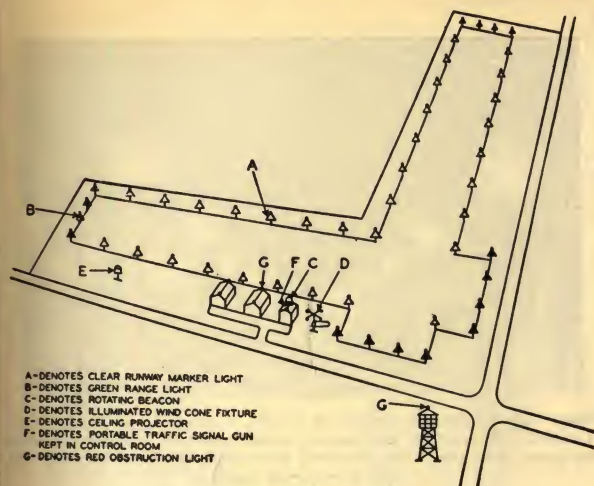

Size of Runway Light Circuit		Item				Kw. Load	
No.	Feet	BA	BB	BC	BD		5
44311	1800x150	16	12	28	0	4290'	1.4
44312	2000x150	18	12	30	0	4730'	1.5
44313	2200x150	20	12	32	0	5170'	1.6
44314	2400x150	22	12	34	0	5610'	1.7
44315	2600x150	24	12	36	2	6050'	1.8
44316	2800x150	26	12	38	2	6490'	1.9
44317	3000x150	28	12	40	2	6930'	2.0
44318	3200x150	30	12	42	2	7370'	2.1
44319	3400x150	32	12	44	2	7810'	2.2
44320	3600x150	34	12	46	2	8250'	2.3
44321	3800x150	36	12	48	2	8690'	2.4
44322	4000x150	38	12	50	4	9130'	2.5
44323	4200x150	40	12	52	4	9570'	2.6
44324	4400x150	42	12	54	4	10010'	2.7
44325	4600x150	44	12	56	4	10450'	2.8
44326	4800x150	46	12	58	4	10890'	2.9
44327	5000x150	48	12	60	4	11330'	3.0

To find cable required for any runway circuit, take actual measured perimeter and add 10 per cent.

Kilowatt loads as listed above include allowance for power losses in cable, with a maximum feeder cable run of approximately 1000 feet from regulator to runway loop.

## Crouse-Hinds Complete Lighting Sets for Small Airports

## Basic Material List

## Includes Beacon, Wind Cone and Runway Lights

Item.	Qty.	Description
1	1	Rotating Beacon, DCB-10 No. 44035.
2	2	Lamps for Item 1, 500-Watt, 115-Volt, T-20 Bulb, Medium Bipost Base, Aviation Service. Lamp No. 500T20/13.
3	1	Illuminated Wind Cone WC-18 No. 44036.
4	1	Hinged Pole for 18-Inch Diameter Wind Cone Fixture; Height, 14 Feet, 8 Inches.
5	4	Lamps for Wind Cone Reflectors, 150-Watt, 115-Volt Medium Screw Base, General Lighting Service. Lamp No. 150.
6	1	Lamp for Wind Cone Obstruction Light, 60 Watt, 115-Volt, A-21 Bulb, Medium Screw Base, Traffic Signal. Lamp No. 60A21/TS.
7	*	Underground Cable for Wind Cone Power Supply, No. 10, 1 Conductor, 600 Volt (Same as Item 8D). Take Twice Measured Length of Circuit and Add 10%.
8		Consists of Items 8A through 8D: Materials for Runway Lighting Sets. Add up Total Materials for Each Runway as Listed under Standard Runway Lighting Sets or Take Actual Quantities Required from Specific Lighting Layout of Airport.
8A	*	Runway Marker Light ERL, No. 44376, Clear Globe, with Isolating Transformer.
8B	*	Threshold Marker Light, ERL, No. 44377, Green Globe with Isolating Transformer.
8C	*	Lamps for Items 8A and 8B, 30 Watt, 6.6-Ampere, T-10 Bulb Medium Prefocus Base, Aviation Service. Lamp No. 6.6A/T10/1P.
8D	*	Underground Cable for Runway Circuits, No. 10, 1-Conductor, 600-Volt, Rubber Insulated with Chloroprene Jacket. (Jacket Can be Reduced to 1/4-Inch if Vulcanized to Insulation.)
9	*	Main Feeder Cables from Regulator to Each Runway Loop Circuit, No. 10, 1-Conductor, 600-Volt (Same as Item 8D). Take Twice the Measured Distance and Add 10%.
10	1	Static Regulator, (†2½, 4) Kilowatts, 240-Volt Primary, 6.6-Ampere Secondary, for Remote Operation, per CAA Specification L-812.
11	1	Control Panel, CPS, No. 43727.
12	1	Runway Selector Cabinet, 3-Circuit, per CAA Specification L-816. Not Required where Only One Runway is to be Lighted.

Alternate Equipment—Direct Operation Regulator  
Replaces Items 10, 11 and 12

- 10A 1 Static Regulator, (†2½, 4) Kw., 240 Volt Primary, 6.6-Ampere Secondary, for Direct Operation. Includes Runway and Brightness Selector Switches and 4 Extra Breakers, per CAA Specification L-811.

## Supplementary Material List

This list includes additional items which will be desired in most cases for a complete lighting installation.

Item.	Qty.	Description
13	1	PTS No. 44280, Portable Traffic Control Projector Complete with 115-Volt Transformer.
14	1	Lamp for Item 13, 50-Watt, 6-Volt, T-8 Bulb, D.C. Prefocus Base. Lamp No. 50T8/83.
15	1	DCE-16 No. 43900 Ceiling Projector, Model 3.
16	1	Lamp for Item 15, 420-Watt, 12 Volt, G-25 Bulb, Mogul Prefocus Base, Aviation Service. Lamp No. 420G25P.
17	1	Standard for Item 15, 3-Foot Length of 4-Inch Galvanized Pipe.
18	1	Base for Item 17, Flange for 4-Inch Pipe.
19	*	Underground Cable for Item 15, No. 10, 1-Conductor, 600-Volt (Same as Item 8D). Take Twice Measured Length of Circuit and Add 10%. (Approximately 2200 Feet Usually Needed.)
20	1	Clinometer Set No. 44173.
21	1	Set of Wind Velocity and Direction Instruments Including FL101 and FL102 Transmitters and FL107 Panel with FL103 and FL104 Indicators.
22	2	Floodlights for Hangar Apron or Loading Area, MDB-16, No. 43676, 70° Spread, with Hinged Door and Standard Base for Mounting on Flat Surface.
23	2	Lamps for Item 22, 1000-Watt, PS52 Bulb, 115-Volt. Lamp No. 1000.
24	*	Single Multiple Obstruction Light for Buildings and Other Locations near Central Control Plant, VAW, No. 43958.
25	*	Double Multiple Obstruction Light, VAW, No. 43961.
26	*	Lamp for Items 24 and 25, 60-Watt, 115-Volt (flame as Item 6).
27	*	Single Series Obstruction Light, for Connecting to Runway Lighting Circuit, VAW, No. 43623.
28	*	Lamp for Item 27, 1020-Lumen, 6.6-Ampere, Medium Prefocus Base, A-21 Bulb, Aviation Service. Lamp No. 1020/66/A21.
29	*	Isolating Transformer for Item 27, 100-Watt, Series-to-Series, Direct Burial Type, per CAA Specification L-803.
30	*	Underground Cable to Connect Primary of Item 29 into Runway Lighting Circuit, No. 10, 1-Conductor, 600-Volt (Same as Item 8D).
31	*	1/2-Inch Conduit for Obstruction Light Wiring to Fixtures.
32	*	No. 12 R.C., 600-Volt Wire for Obstruction Light Wiring to Fixtures.

\*Quantity depends on local conditions. Specify for each installation.

†To determine size of regulator, take load of longest runway, add 100 watts for each 1020-lumen obstruction light lamp (with transformer) in runway circuit. Only one runway at a time is switched on.

Add wiring materials as required for rotating beacon, using 3 No. 10 or No. 12 wires. Extra conductor is for lamp-failure indicating light. Also add conduit (if needed) for bringing wiring in from field to control panel and regulator.

Wherever possible, use same size and type cable as used for runway lighting circuits (Item 8D), since this will simplify procurement of cable.

These material lists include only quantities of lamps as required to use in equipment. Spare lamps should be ordered with initial installation, based on a minimum of 25 per cent of lamps installed and at least one spare lamp of each type. Lamp abbreviation numbers shown are standard ordering abbreviations.

Add wiring materials as required to Items 21, 22, 24 and 25 and miscellaneous small hardware, tape, etc., as required.

## G-E Street Lighting Equipment

Before: Business street in Dixon, Illinois, before installation of new G-E luminaires

After: Same business street in Dixon, Illinois, after installation of new G-E Form 79-S luminaires. Note how this luminaire directs the light upon the street, thereby effectively utilizing more of the light from the lamp

When selecting a luminaire, the first consideration is the amount and quality of illumination needed. Appearance is important, too—not only the appearance of the lighted street, but also the daytime appearance of the equipment itself. Other factors of importance are the mechanical and electrical features of construction which relate to continuity of service, operating and maintenance expense, and the initial investment.

The "before and after" photographs of a street-lighting installation shown above show how G-E modern luminaires meet the basic needs for better street lighting. They show conclusively that much more light is properly distributed—without objectionable glare—than is the case with older types of units.

Daytime appearance is affected mainly by the means chosen to support the luminaires, and nature of the wiring.

Modern luminaires are of simple functional design and are of relatively small size. Generally speaking, they are designed to be inconspicuous and unobtrusive, rather than to convey any particular artistic or decorative effect; and it is believed that if this idea is carried out in selecting the supporting brackets, standards, and method of wiring, the most satisfactory result will be obtained.

The illumination requirements of many kinds of streets, and users' individual preferences as to methods of installation and operation, result in many variations of G-E modern luminaires. This introduces the problem of selecting the construction best suited to any particular project. In addition to the discussion and examples that follow, we provide General Electric luminaires for all conditions of modern street lighting.

## Types of Light Distributions

## Symmetrical or Circular Distribution

I. E. S. Type V

Luminaires with this distribution are best-adapted for center suspension over intersections or streets where an all-around spread of light is desired.

## Wide Asymmetrical Distribution

I. E. S. Type IV

Luminaires with this distribution are preferred for very wide streets or intersections where several units will be used or for streets which should have a spread of light considerably beyond the pavement area. Side-of-street mounting is recommended.

## Narrow Asymmetrical Distributions

I. E. S. Types II and III

Luminaires with these distributions are recommended for most situations where as much of the light as possible is to fall on the pavement area. Side-of-street mounting is advised.

## 2-Way Narrow Asymmetrical Distribution Obtained

I. E. S. Type I

Luminaires with this distributions give best results where they can be placed well out over the paved surface. Side-wise shielding of light is outstandingly good. This, together with a high angle of maximum candlepower which permits long spacings, makes this distribution especially well-suited to residential streets.

For definition of I.E.S. light-distribution types, refer to *Recommended Practice of Street and Highway Lighting*, The Illuminating Engineering Society, 51 Madison Ave., New York 10, N.Y.; or ask our representative.

### G-E Street Lighting Equipment Designation of Pendent Luminares

The Form numbers which designate G-E pendent luminaires consist of a basic number (such as 79, 72, 45H7, 45L) which signifies the hood or insulator construction, and a suffix letter (such as S, D, R, VR) which signifies the type of reflector equipment. This provides a concise identification for any combination of standard hood or insulator with a standard reflector that may be desired to meet specific requirements for mounting, wiring, insulation values, light control, and appearance.

Form 79 hood is a die-cast aluminum hood for series or multiple circuits. It is normally wired internally through the supporting bracket, but may also be provided with bushings for external wiring. These die-cast aluminum hoods are preferred by many users for their attractive appearance and resistance to breakage.

Form 79R

Form 79S or 79P

Form 79D

Form 79AS, AD, or AR

The Form 79R is General Electric's most modern and efficient luminaire for street and highway lighting. The reflector is made of high-efficiency \*Alzak processed aluminum with spun-sealed G-E Holophane refractor globe. This luminaire has asymmetrical light distribution (IES Type III) and is particularly suited for illuminating light to heavy traffic streets, arteries, and highways where highest efficiency is desired. Reflector and hood may be obtained either with natural aluminum finish or with glossy green Glyptal enamel finish. This luminaire will accommodate lamps up to 10,000 lumens series or 575 watts multiple.

The Form 79S is an attractive luminaire having symmetrical light distribution (IES Type V). It is used for lighting intersections or very wide light traffic streets where luminaires may be center-suspended; or business streets where high-level illumination is desired on sidewalks and building fronts. The reflector is made of \*Alzak processed aluminum with spun-sealed, clear rippled or light alabaster globe. This luminaire will accommodate lamps up to 10,000 lumens series or 575 watts multiple.

The Form 79D luminaire is same as the Form 79S with deflectors added. This luminaire having asymmetrical light distribution (IES Type IV) is used mainly for illuminating light to heavy traffic streets and arteries, particularly those over 40 feet wide. This luminaire will accommodate lamps up to 10,000 lumens series or 575 watts multiple.

Two types of detachable globe holders are available in place of spun-sealed globes for the Types S, D, and R reflector assemblies. The roller-latch type may be relamped from the ground with a lamp picker, while the clamp-band type is serviced from the pole, in the same manner as the spun-sealed design.

Form 79SO

1000 or 2500-lumen lamps are used, available for 4 $\frac{3}{8}$ , 5 $\frac{1}{4}$  and 5 $\frac{3}{8}$ -inch light-center lengths.

The Form 79SO is an advanced design open suburban luminaire having asymmetrical light distribution (IES Type II). It is used for lighting residential and very light traffic streets and alleys requiring exceptional durability and low cost. Reflecting shields shade nearby residences. Either or both shields may be omitted for use at intersections. The reflector is made of \*Alzak processed aluminum protected against deterioration by a dichromate finish. Either

Form 79AS is an attractive large-lamp luminaire having symmetrical light distribution (IES Type V). Recommended for lighting business streets where high-level illumination is desired. This luminaire is large and ornamental, and provides highly efficient light control and glare suppression.

The Form 79AD luminaire is similar to Form 79AS with deflectors added. The Form 79AD has asymmetrical light distribution (IES Type IV) and is particularly suited for lighting medium to heavy traffic arteries, express highways, and business streets.

Form 79AS, AD, and AR will accommodate lamps up to 15,000 lumens series or 820 watts multiple.

Form 79AR is similar to Form 79AS except that it includes a small house-side auxiliary reflector and the new No. 4090 Holophane refractor globe. Its light distribution is I.E.S. Type IV; its application the same as Form 79AD, but utilization efficiencies are much higher.

Form 79VR

Form 79CR

Form 79VR is highly efficient, having two-way narrow asymmetrical distribution (IES Type I), practical for illuminating residential and very light traffic streets where economy of 4000 and 6000-lumen lamps at long spacing is desired. Reflector is made of \*Alzak processed aluminum with G-E Holophane refractor globe spun-sealed. Accommodates lamps up to 10,000 lumens series, or 575 watts multiple.

The Form 79CR is an enclosed luminaire having asymmetrical light distribution (IES Type III). This luminaire is well-suited for lighting residential and very light traffic streets and alleys where attractive appearance and easy maintenance of lighting efficiency are desired at low cost. The reflector is made of \*Alzak processed aluminum with G-E Holophane refractor spun-sealed. Either 1000 or 2500-lumen lamps are recommended, available for 4 $\frac{3}{8}$ , 5 $\frac{1}{4}$ , and 5 $\frac{3}{8}$ -inch light-center lengths. A similar unit with 4-way distribution for intersections is available.

\*Manufactured under Aluminum Company of America patents.

## G-E Street Lighting Equipment

Concluded  
Designation of Pendent Luminaries

Form 101VR

Form 72R, D, or S

Form 45H7R

Form 45H7CR

**Form 101** series of luminaires are similar to the Form 79 luminaires except with either plain or heat-insulated slip fitter added. The heat insulated slip fitter allows adjustment of the luminaire for proper alignment. The porcelain heat insulator prevents grounds in series circuit bracket cable that may be caused by high-temperature operation. The porcelain is in the region of critical temperatures. This time and temperature-defying protection against insulation breakdown deserves serious consideration.

**Form 72** luminaire differs from the conventional insulator in that it is supported under compression by a clamp around the middle of the insulator. Porcelain, being weak in tension but very strong in compression, will by this method of support better resist breakage. Short circuits and grounds are avoided on the Form 72 because of the strong two-conductor cable, the large radius of bend, and the snubbing action of the cable in its channel which relieves strain on the binding posts. The cable enters a long porcelain channel and is split well within, so there is no chance of grounding against the metal parts or pipes.

This porcelain hood is used for series circuits up to 11,000 volts and will support nearly all of the G-E modern reflector assemblies.

dial-wave reflector, enclosed suburban-reflector assembly, and a variety of globes and refractors.

**Form 45H7** luminaires have wet-process porcelain insulators for series circuits up to 11,000 volts. This insulator is equipped with tie lugs and either external terminals or ports and internal terminals for line wire. It is constructed of standardized parts of highest quality for long life and low maintenance cost. This insulator is supported by a top-tapped galvanized cast iron hood.

Nearly all of the G-E modern reflector assemblies may be used with this insulator.

Form 45L

**Form 45L** is a low-priced, galvanized cast iron hood used for multiple or medium-voltage series circuits, preferably under 2500 volts. This hood can be furnished either internally wired or externally wired. On all multiple luminaires, the socket is mounted on an adjustable support, so that the light center can easily be set to give the best distribution for various sizes of lamps. The Form 45L is best suited for series circuits using Type IL transformers. For maximum safety on circuits over 2500 volts, an insulator type of luminaire, such as the Form 72 or Form 45H7, is recommended.

The Form 45L is most often used with the open suburban and radial-wave-type reflectors, although it may be obtained with cast reflectors and a variety of globes and refractors.

The 45L with a radial-wave reflector, as illustrated, makes a practical minimum price luminaire for general-purpose lighting.

Form 46

**Form 46** is a dry-process porcelain insulator for luminaires commonly used on residential and light traffic streets. It is used on series circuits, preferably under 2500 volts. The Form 46 may be wired either internally or externally. It is equipped with integral porcelain tie lugs which remove the strain from the terminals when wired externally. Two holes through the top of the insulator are used when

wired internally. The insulator is shipped with cork plugs in these openings to prevent condensation from entering when wired externally. Either wing-screw clips or hinged-clamp adapter may be used with the open-type reflectors.

The illustration shows the Form 46 insulator with the open suburban reflector. It may also be used with the ra-

Form 101AR

Form 101R

Form 7250

## G-E Ornamental Luminaires

Ornamental luminaires are used where their particular styling appears more suitable for the environment in which they are to be installed, or when a liberal proportion of upward light is desired to illuminate building fronts along business streets or to illuminate trees, as in parks. The illustrations show two distinctive designs. Many other designs are available to harmonize with different types of architecture.

The G-E ornamental luminaire consists of a cast iron casing with series or multiple socket, rippled glass globe, and a canopy and canopy holder. It may also be furnished with a refractor, ornamental ribs and bands, or in the lantern-type unit.

Metal parts of lantern units are made of cast aluminum with natural finish. The casings are designed to harmonize with architectural treatment of the lighting standards. Each unit includes a series-circuit porcelain receptacle and socket or a multiple socket.

Rippled glassware, for these luminaires, has high mechanical strength, efficiency of light transmission, and immunity from the effect of abrupt changes in temperature. It gives an incandescent-light source the appearance of sparkling light. The small irregular vertical ridges give excellent diffusion.

## G-E Sodium Luminaires

### Type M-2

**Straight Series Luminaire with Form 72 Insulator for Externally Wired Bracket**

This luminaire is used for lighting highways, urban and rural traffic arteries, bridges, intersections, traffic circles, grade crossings, underpasses, and industrial yards. It operates from either standard a.c. multiple or constant-current series circuit.

The reflectors are polished \*Alzak finished aluminum with a dichromate and plastic finish and methacrylate lacquer seal to give them long life and maintain initial high efficiency.

Auxiliary equipment for operating the luminaire is self-contained and includes a radio-interference suppressor. Lamp and vacuum flask are held securely, but can be removed easily. Flask breakage is negligible because the lamp can be replaced without moving the flask.

Uses 10,000-lumen sodium lamp, Type NA-9, and No. 71-G vacuum flask.

### Type M-3

This luminaire is used for lighting tunnels. It may be suspended from the ceiling over the pavement. In new tunnels, it is desirable to recess the luminaires with the glass door approximately flush with the ceiling surface. For one-way-traffic tunnels, a swivel mounting can be furnished with the luminaire which permits further shielding of the light source.

A 10,000-lumen Type NA-9 sodium lamp is used in this luminaire. This sodium lamp results in excellent overall economy on continuous burning tunnel-illumination circuits. Because of the resulting saving in wattage consumption, cable and circuit expense, the use of sodium lamps on 6.6-ampere series circuit should be carefully considered for longer traffic tunnels.

The Type M-3 sodium luminaire is totally enclosed. The reflector is constructed of \*Alzak processed aluminum of high reflectivity. The required control and protective equipment is located in a housing in the back of the luminaire which is easily accessible by opening a hinged door.

\*Manufactured under Aluminum Company of America patents.

## G-E Form 79D Mercury Luminaires

Form 79D

Ballast

Type F-H1  
Mercury Lamp,  
400 Watts,  
16,000 Lumens

More light is obtained on the street for each dollar spent when mercury lamps are used in modern G-E pendent luminaires because:

1. Mercury lamps produce more lumens per watt of power consumed, than do filament lamps.
2. Maintenance costs will be lower since longer-life lamps makes it necessary to visit the luminaire for relamping only once every 12 to 15 months.

The characteristic bluish-white color of mercury lighting attracts the attention of the public, thereby giving those responsible credit for a modern and progressively lighted street.

Mercury lamps for street lighting find their best application on main business streets where high levels of illumination are desired. Mercury lighting should be considered only where 0.6-foot-candle average, or higher, is desired. This will include, in addition to the above, primary traffic arteries.

Mercury lighting is easily included in standardization programs, as the addition of a mercury ballast will convert a standard multiple fixture for mogul-based 7-inch light-center filament lamp into a fixture for operating the 400-watt, 16,000-lumen F-H1 mercury lamp.

Best appearance is obtained with mercury lighting when light alabaster glassware is used. Refractor-type glassware, for mercury luminaires, should be of comparable size to those specified for filament lamps of the same lumen output.

Operating experience indicates that available mercury lamps have longer life and more stable operation when burned in the vertical position.

Mercury lamps may be operated from either series or multiple circuits; a suitable ballast is required in both types of operation.

The rated life of the G-E F-H1 mercury lamp is 6000 hours—based on specified test conditions with the lamp turned off and restarted no oftener than every 10 hours.

The new type ILH high-power-factor multiple ballast is small, lightweight, and efficient. This ballast has a power factor of 0.91. Starting current is less than operating current, and the dangers of high inrush current are eliminated. This ballast will operate over a wide range of voltages without taps.

## G-E Type RO Pole-Type Constant-Current Transformers

For 6.6-Ampere Series Lighting Loads

2400 Volts (With 2150-Volt Tap)—60 Cycles

The Type RO is an oil-cooled constant-current transformer which operates automatically. It can be mounted on poles in remote districts or where subdivided downtown lighting circuits are desired. It can be controlled by Type E-1 controller and time switch or photo electric relay.

Built in sizes ranging from 1 to 30 kw., to operate at any commercial primary voltage and frequency or secondary current, but the standard transformer is for 60 cycles, 2400 volts on the primary and 6.6 amperes on the secondary.

The 2400-volt transformer will operate satisfactorily on from 2300 to 2500 volts, and a tap is provided on the primary for operation at 2150 volts without reduction of output.

These features are combined with the same current regulation through as wide a range as offered by the best station-type constant-current transformer. This feature alone practically guarantees the normal life of the lamps operating on a circuit controlled by such a transformer. The efficiency is the same as for the station-type transformer and the primary power factor is 75 per cent at maximum load.

The high internal reactance of the transformer serves to protect the lamps at starting and acts instantaneously to check surges on the line which would otherwise tend to shorten the life of the lamps.

The moving secondary coil with its high repulsion and the compound balancing lever, gives regulation within  $\pm 1$  per cent from full load to dead short circuit. This feature not only protects the lamps from changes in current, because of changes in secondary load, but also protects the lamps from fluctuations in primary voltage.

Ball bearings are used throughout for immediate response to small changes of load.

Lightning arresters are recommended on both primary and secondary overhead lines for protection.

The Type RO transformer is also available in subway type for mounting in subways or manholes. This transformer is almost identical with the pole-type transformer, except that it is enclosed in a specially designed sheet steel waterproof tank. Since poles carrying circuits are being removed from many of the city streets, this transformer may be mounted underground and thereby connected directly to the underground feeder circuits and lighting circuits.

Subway transformers are equipped with oil indicating plugs installed in the tanks to indicate the oil level without requiring the removal of the cover.

If the primary circuit leads into the subway from overhead, pole-type cutouts can be used. If, however, the primary circuit is entirely underground, the D & W subway fuse cutouts must be used.

Similar transformers available with built-in power-factor correction—Type ROC. Information on request.

**G-E Type RF Automatic Station Type  
Constant-Current Transformers**  
For Operating A.C. 6.6-Ampere Series  
Lighting Loads  
24,000 Volts (No Taps)—60 Cycles

With Band Iron Casing

Designed for use in an unattended substation. Can be used for any indoor installation.

Built in practically any capacity and for any commercial voltage, frequency, and secondary current, but it is recommended that, on account of the high secondary voltage, capacities not exceeding 20 kw. be operated with single-circuit secondary. Sizes from 40 kw. are furnished with multicircuit secondary, and can be operated either single-circuit or multicircuit.

Can be started up automatically with coils together and with only one lamp on circuit, regardless of capacity of transformer. Current surge not sufficient to destroy lamp.

Transformers are not provided with any taps, either for voltage or for partial-load operation. Because constant voltage is maintained in the stations, no primary voltage tap is necessary.

Equipped with protective low-loss band iron casing. Balancing mechanism supported on ball bearings.

**How the Constant-Current Transformer Regulates**

The moving-coil, constant-current transformer is a variable-impedance device for regulating output current to a constant value through a large range of load impedance and with a limited variation in primary supply voltage.

Fundamentally, its equivalent circuit may be considered as a conventional, low-reactance, distribution transformer with an external, self-adjusting variable series reactance.

This reactance is magnet-leakage reactance and always adjusts itself to a value, which, when added to the load impedance, permits constant current to flow. The amount of reactance is determined by the moving-coil position, which in turn is maintained by the force of repulsion between coils.

The desired output current sets up a definite corresponding force of repulsion which floats the moving coil in the position which produces this current. For any given set of conditions, a state of mechanical equilibrium is attained whereby the force of repulsion, aided by the counterbalancing weights, exactly balances the weight of the moving coil.

Where the transformer is fully loaded and minimum series reactance is needed, the moving coil floats near the bottom of the core window (Fig. A). As load is removed and more reactance is required to regulate current, the coil floats higher. Fig. C shows it in the position corresponding to no-load (short-circuited) operation. Changes of load tend to unbalance the equilibrium of forces by increasing or decreasing the force of repulsion. In a freely moving, well balanced mechanism, these are immediately counteracted by the movement of the floating coil to a new position which restores the mechanical-electrical balance.

**G-E Type E-1 Street Lighting  
Controllers**

Type E-1-F, for Pole Mounting

Type E-1-C, for Subway Use

Designed to control Type RO pole or subway transformers by means of an adjacent series circuit, a multiple pilot-wire control circuit, or a local time switch or photoelectric relay. With either series operating coil rated from 6.6 to 20 amperes at any frequency, or with shunt operating coil at 120, 240 volts, 50, 60, or 25 cycles; in two types—normally open or normally closed. Also furnished for subway mounting when necessary. Switch is for use on any voltage up to and including 7620 volts, 15 amperes, and the most popular voltages with current ratings are as follows: At 7500 volts, switch will break 15 amperes; 6600 volts, 25 amperes; 4500 volts, 35 amperes; or 2300 volts, 50 amperes. Carrying capacity 60 amperes at any voltage above 500. Operates at any frequency.

The wattage of operation coil is such that enough heat is generated to overcome any congealing effect, and switch may be used in any weather condition which will be encountered in the northern hemisphere without sluggish operation. The high-potential test on this controller is 25,000 volts from power to control from power to ground, or from control to ground.

Pole-type switch is mounted in steel tank with sheet steel cover which is not connected to switch mechanism. Wet-process bushings have clamp-type terminals.

Subway-design switch is same as pole-type in respect to electrical characteristics, but has cast-iron tank and wiping sleeves for cables.

**G-E Type SL Series Transformers****Subway and Aerial Types**

For 60-Cycle, 6.6-Ampere Constant-Current Circuits,  
6.6-Ampere Secondaries

Pole Type, Oil-Filled,  
4 and 5 Kva.

Subway Type, Compound-  
Filled, 2 to 4 Kva

An insulating transformer, the primary winding of which is energized from a series circuit, and the secondary of which is used for supplying current to a small number of lamps connected in series and located where the high potential of the main series circuit would be objectionable—for 6.6 amperes primary and secondary.

At certain locations it is sometimes desirable to have a lower potential than prevails on large capacity series-lighting circuits, and yet, since they function similarly, it is desirable to control these branch circuits simultaneously with the main circuit.

The SL transformer affords an ideal method for this control, as the low-voltage branch circuit is turned on and off with the closing or opening of the main constant-current-transformer circuit. Fixtures with series sockets and film cutouts must be used on these transformers.

Both the aerial and subway types are available in output sizes from 0.25 to 5 kva. They are mounted in casings made of drawn copper-bearing steel. The aerial-type transformers of 0.25 to 3-kva. sizes are compound-filled, and the 4 and kva. sizes are oil-filled. The subway-type transformers of 0.25 to 4-kva. sizes are compound-filled, and the 5 kva. sizes are oil-filled. For both the aerial and subway types, the secondary current regulation is within  $\pm 1$  per cent for the 0.25 and 0.5-kva. sizes for loads between 80 and 100 per cent, and for the 1 to 5-kva. sizes for loads between 80 and 108 per cent.

All transformers are tested with 22,000 volts applied to the primary with the secondary, core, and casing grounded. Also, 4000 volts is applied to the secondary with the primary, core, and casing grounded.

**G-E Type IL Series Transformers****Pole-Base and Aerial Types**

For Use on 60-Cycle, 6.6-Ampere Constant-Current Circuits

Pole-Base  
Type

Aerial Type

**Series-Series, Single-Lamp**

For operating one 6.6, 15, or 20-ampere series lamp from 6.6-ampere constant-current series circuit.

Allow the use of high efficiency series lamps where high potential is impracticable and unsafe. No film cutout is required; each lamp is independent of the others in circuit. In case of an accident to one or more, remainder of lamps on circuit burn without interruption.

For use with pendent units, transformers can be mounted on the crossarms of poles.

When lamp wattage varies between 8 per cent above and 20 per cent below normal, secondary current will not vary more than 1 per cent with normal primary current and frequency.

Available in either pole-base or aerial type.

**Series-Multiple, Single-Lamp**

For operating one 115-volt, 40 to 1000-watt multiple lamp from 6.6-ampere constant-current series circuit.

Allow the use of series circuits to feed floodlights, small signs, safety islands, illuminating roads, and warning signs. This permits simple control of multiple lamps, so that they may be turned on with street lights. Series socket or other protective device using a film cutout must be used with all series-multiple, single-lamp transformers. Available in either pole-base or aerial type.

**Series-Multiple, Multilamp**

For operating groups of 115-volt multiple lamps from a series circuit. Available in three sizes, 350, 500, and 750 watts full-rated capacity. Used principally for lighting airport wind tees and obstruction lights, power being supplied from series boundary or runway-lighting circuits. Close voltage regulation from full load to open circuit. No open-circuit protection device is necessary. Available in either pole-base or aerial type.

**Special Features**

All Type IL transformers are given a one-minute insulation test of 22,000 volts between primary and all parts. Also a 1500-volt insulation test between secondary and all parts.

The current regulation is within 1 per cent with load variations from 80 to 108 per cent of normal rating.

Internal construction of pole-base type is the same as aerial type. Leads are brought out through wiping sleeves welded into the cover. Soft-rubber bushings are provided to effectively seal leads passing through the casing into the wiping sleeves. Wiping sleeves are of tinned steel to aid in making a wiped joint.

The core is made of carefully annealed, high-permeability, nonageing, cold-rolled silicon steel. High and low-voltage windings are wound and insulated separately, then impregnated under vacuum before assembling to the core. Insulation is for 10,500-volt circuit. Entire casing is filled with high quality insulating compound. Case is constructed of one-piece drawn copper-bearing steel.

**G-E Pellet Lightning Arresters**

For Types RO and ROC Constant-Current Transformers

Pole and Subway Type—Outdoor Service Only

Recommended for protection of both the primary and secondary sides of constant-current transformers.

Pellet arresters are single-pole, for outdoor use on both the constant-potential side and the load side of constant-current transformers. Each design has a minimum and maximum voltage rating and, under no circumstances, should it be applied to a circuit the voltage of which can exceed the arrester's maximum rating. Where selection of arresters for the protection of the load side of the transformer is to be made, the arresters should never be applied to a transformer of a larger kilowatt rating than specified for the arrester.

**G-E Protectors**

Pole Type for Multiple-Control Circuit

Open circuits in series-street-lighting systems are unavoidable, especially on aerial circuits, and it is desirable from the standpoint of safety first, that when an open circuit does occur, the primary of the main transformer be de-energized. This protector has been developed to operate in conjunction with a Type E-1 controller, and its function is to open the controller as soon as an open circuit takes place.

The mechanism of the protector consists of two small transformers, a thermal switch, relay, set of disconnecting contacts, and a timing resistor. One of the two small transformers is energized by the control circuit and the other by the load circuit to be protected. Under normal operating conditions, the disconnecting contacts are closed on the multiple-control type, and on the series-control type they are open.

When an open circuit occurs in the load circuit, the relay becomes de-energized, closes, and completes a circuit so that the thermal switch will operate and open the disconnecting contacts on the multiple type (close on the series type) to de-energize the controller operating coil. This allows the controller contacts to open and de-energize the primary of the constant-current transformer.

After the open circuit in the load circuit has been repaired, the protector can be reset (reconnecting the transformer to the main system) by means of a reset lever conveniently located in the bottom of the casing. This protector operates entirely in air and is housed in an attractive drawn steel case. It is isothermic in function.

**G-E Form F-100-B Pothead Cutouts**

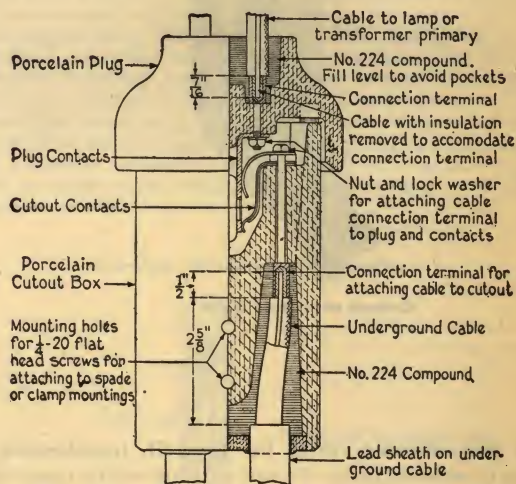

For Ornamental Street Lighting Units

Pothead Cutout Only

Cutout with Spade Bracket and Cable Clamp. For Mounting Inside Base of Standard

Sectional View of Form F-100-B Cutout

For use with straight series street-lighting circuits for mounting in the base of ornamental lighting standards.

Consists of two sections, the box and plug, both made of wet-process porcelain. Plug is equipped with flat contact strips, insulated from each other. Provision is made at top part of plug so that insulating compound can be poured in around the leads. Box contains four flat phosphor-bronze springs. Contacts are assembled within an air-expulsion chamber.

At the top of box, a hole is provided through which insulating compound can be poured. Two holes are provided in bottom of contact of cutout for parkway cable.

### G-E Disconnecting Dropout Cutouts For Type SL Transformers and Loop Sectionalizing Application

Dropout Cutout

Cutout with Door Open

A disconnecting switch for Type SL transformers and loops of series-lighting circuits, with automatic open-circuit trip protected from accidental operation by a surge-voltage by-pass. It keeps the main circuit closed, prevents unnecessary breakdown of luminaire film cutouts by voltage surges, removes voltage from broken wires, protects transformers and cables from sustained overvoltage of open-circuit operation, provides convenient and positive means for disconnecting the transformer or loop for servicing. For aerial mounting on crossarm.

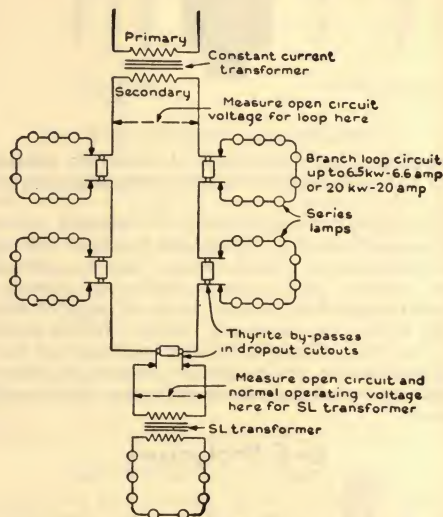

Used for series loops having a drop of not more than 1000 volts, all currents to and including 20 amperes. Open-circuit voltage must not exceed 10,000 volts.

Used for Type SL transformers up to 10-kw. rating in 6.6, 7.5, and 20-ampere primary rating.

### G-E Thyrite By-Pass

Cross Section View of Thyrite By-Pass

Typical Application of Dropout Cutout on  
Type SL Transformer or Loop Circuits

The Thyrite by-pass, the detector and trip element of the dropout cutout, is the means for automatically releasing the door in event of open circuit—thus allowing the door to be thrown open, disconnecting as well as short-circuiting the protected loop or transformer.

The Thyrite by-pass is shunted across the load, inside the cutout. It is able to detect the difference between surge overvoltage and open-circuit voltage; and will pass the former through it harmlessly, but close upon the latter.

The impedance of a properly selected Thyrite by-pass to normal voltage is sufficiently high that leakage current and heating are negligible. A surge voltage encounters (because of the inherent properties of Thyrite) relatively low impedance, and will therefore pass readily through the Thyrite material or spark across the internal gap; but the properties of the Thyrite will prevent a power follow. A sustained overvoltage resulting from open-circuit operation, however, will produce sufficient current flow (either through the Thyrite material or across the arc gap, or both) to develop the heat necessary to melt the solder holding the short-circuiting spring. The release of the short-circuiting spring forces out the metal knobs projecting from the end caps, allowing the Thyrite by-pass to slide down into the slots in which it is normally held, thus causing the slider to be released and allowing the door to be thrown open. Only a fraction of a second is required for this operation.

## G-E CR7843-A 30-Ampere Remote Control Multiple Switches

Multiple Switch

Internal Mechanism  
Normally Open Type

Silver-alloy heavy-duty contacts designed for full 30-amp. lamp load, reversible for normally-open or normally-closed operation

All terminals, clips, etc. of brass, cadmium plated

This remote control switch is a single pole, single throw magnetic switch for operating one or more lamps on one low-voltage multiple circuit. Its application is for remote control by pilot wire or cascade connection, for mounting on a pole or in the base of an ornamental standard. The capacity of this multiple switch is 30 amperes normal lamp current at 125 volts, any frequency. Normally open or normally closed with an inrush capacity up to 15 times normal current. The operating coil consumes about 2 watts at 125 volts a.c., 60 cycles.

Switch is supplied with or without the following optional equipment: 30-ampere load circuit fuse; 2-ampere coil circuit fuse; carbon-block lightning arrester in coil circuit; Thyrite arrester in coil circuit, alternative with carbon-block arrester for surge voltage protection.

Switch is also available with a 6.6-ampere operating coil for operation from series lighting circuits with Type IL transformer.

Another variation of this switch is furnished with 10-ampere contacts at a slight reduction in price.

## G-E Film Cutouts

### Enclosed Copper-Oxide Film Cutouts

Copper-Oxide Disc Cutouts Are Supplied in This Handy Plastic Screw-Top Container, Clearly Labeled

Rolled metal edge makes cutout strong and easy to install.

Smooth flat surfaces insure good electrical contact.

Stiff fiber insulation, securely clamped makes cutout mechanically sturdy; it will not fall apart.

Fiber insulation excludes moisture; colored for identification of rating.

Oxidized copper disc gives excellent uniformity of dielectric value.

Indentation centers copper insert.

"All-round" contact makes cutout pressure-proof.

Enlarged Cutaway View of Enclosed Copper-Oxide Film Cutout

Used with individual lamps in series circuits to provide circuit continuity when the lamp fails.

G-E copper-oxide film cutouts are outstanding for their dependable operation and sturdy construction. The dielectric value of copper oxide is carefully controlled for uniformity, and the film is not affected by heat or pressure. The oxidized disc is securely enclosed in a moistureproof aluminum and fiber casing which resists damage and will not separate. Carefully controlled production of this standardized cutout in large quantities makes its high quality, reliable protection available at low cost.

### Air-Cap (Lead-Disc) Cutouts

Air-gap cutouts are high-voltage types for use with Type SL series transformers for the protection of the transformer itself. Two lead inserts are separated by an air gap (variable according to voltage rating). Open-circuit voltage breaks down the dielectric of the gap, and the resulting current flow softens the lead sufficiently to cause the two inserts to fuse together through the gap.

Cutouts of this type should not be used for lamp protection; a branch series circuit supplied by a Type SL transformer should have its lamps protected by copper-oxide disc cutouts of proper rating, so that the transformer protective cutout will operate only if the circuit itself goes open.

## G-E Pipe Brackets for Street Lighting

Straight Pipe Brackets

Popular straight pipe bracket for hanging all types of luminaires for street lighting. Strong, durable, and easy to install; offered in a wide variety of types and lengths to meet all kinds of installation problems.

Union Metal Curved Upsweep Pipe Brackets

A popular, ornamental-type upsweep pipe bracket for mounting pendent-type luminaires. Strong, durable, easy to install, offering higher mounting height and a variety of lengths to fit all installation problems. Includes plumbizer (leveling adjustment) in head.

Curved Upsweep Pipe Brackets

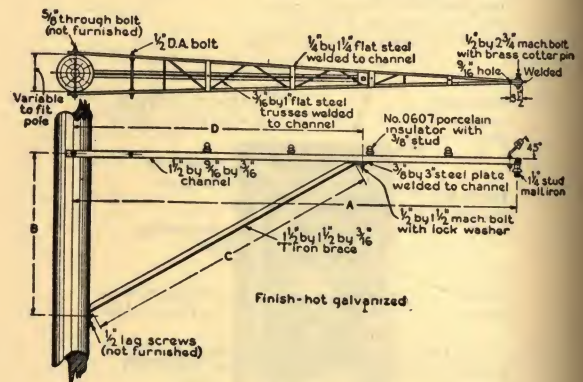

A new style upsweep street lighting bracket for wooden poles, featuring the attractive single-curve arm. Exceptionally easy to wire, with long radius bending of cable to prevent insulation cracking. Takes slip-fitter luminaire.

Straight Overbraced Mast Arms

For supporting lightweight luminaires, such as Form 101, where conditions require a longer extension than that provided with ordinary brackets. For wood-pole mounting, with braces attached to both sides of pole, to provide strength and rigidity. Neat appearing, easy to install, and requires very little pole space. Also available with under braces and or right-angle bend.

Channel Mast Arms, Bottom-Braced

For supporting all types of street lighting luminaires, where conditions require longer extension and greater strength than the pipe brackets. Twin-channel arm construction offers greater resistance to side sway. Underbraced to provide maximum mounting height. Choice of end fittings for slip-fitter or top-tapped luminaires. Available in a variety of lengths, either overbraced or underbraced.

Channel Mast Arms, Chain-Operated Trolley Type

Preferred type retractable trolley mast arm, crank-operated. For supporting all types of street lighting luminaires where conditions require luminaire be serviced from pole. Side brace offers greater resistance to sway. Uses top-tapped luminaires.

## G-E Hangers and Wiring Accessories for Street Lighting

**Spreader Arm**

To clamp to bracket (3500 volts or less). Sizes for 2, 1 $\frac{1}{4}$ , or  $\frac{1}{4}$ -inch pipe.

**Spreader Arm**

To mount on bracket end (3500 volts or less). For 1 $\frac{1}{4}$ -inch top tap, with 1 $\frac{1}{4}$ -inch bottom pipe thread.

**Eye Suspension Hanger**

With 1 $\frac{1}{4}$ -inch stud and spreader arm (3500 volts or less).

### Span-Wire Clamp Suspension Hangers

With 1 $\frac{1}{4}$ -inch stud and spreader arm (3500 volts or less).

With 1 $\frac{1}{4}$ -inch stud, without spreader arm.

With 1 $\frac{1}{4}$ -inch stud and spreader arm (for all series circuits).

With 1 $\frac{1}{4}$ -inch stud, without spreader arm (for all series circuits).

### Miscellaneous Suspension Devices

**Plumbizer**

**Eye-Suspension Stud**

**Cable Inlet**

Plumbizer. Sizes, 1 $\frac{1}{4}$ -inch upper tap, 1 $\frac{1}{4}$ -inch lower nipple; 2-inch upper tap, 1 $\frac{1}{4}$ -inch lower nipple; 2-inch upper tap, 2-inch lower nipple. Green paint finish.

Eye-Suspension Stud. Sizes, with 1 $\frac{1}{4}$ -inch thread and with  $\frac{3}{4}$ -inch thread.

Cable Inlet. 1 $\frac{3}{4}$ -inch top and bottom thread.

### Insulated-Wire Holders $\frac{3}{4}$ -Inch Opening

Bulletins Giving Complete Information Gladly  
Furnished on Application

## Union Metal Heavy Duty Steel Lighting Standards for Pendent Luminaires

Round Monotube  
Design No. 894614

Octaflute Monotube  
Design No. 894615

These round-shaft Monotube standards with four to eight foot brackets are designed to match appearance and performance of today's traffic safety luminaires. Comparatively light in weight, making handling and erection of shaft relatively easy. Mounting heights and bracket lengths conform to I.E.S. code requirements. Cold-rolled No. 11 gage steel shafts, strong castings, welded-on fittings. Fabricated sheet-steel base. Standard not only safely supports the luminaire, but also absorbs severe traffic vibrations and impacts.

Octaflute standards are constructed in same fashion as round standards, except poles are fluted. Special cold-rolled process provides sharp fluted corners, materially increasing strength.

Standards with ten to eighteen foot brackets, especially suited for use on traffic arteries, freeways, highways, etc., can also be furnished.

Twin-lamp standards with two opposing bracket arms can be furnished in both round and Octaflute designs. Information on any other type of pole desired will be furnished on request.

A complete line of pole accessories is available. Ask your distributor for details.

Prices on request.

## American Concrete Hy-Lite Standards for Pendant Luminaires

These concrete standards with four to eight foot brackets are similar in general appearance to the metal standards illustrated.

Hy-Lite Design No. 655 is strong, long-lasting, easy to install, attractive in appearance, and requires no painting. Meets recommendations of street and highway specialists. Manufactured from ageless granite. Steel reinforcing cage, which provides tensile strength, is hermetically sealed in standard. Finest quality cement meets all A.S.T.M. standards.

Hy-Lite Design No. 609 and 610 differ from Design No. 655 by having smaller pole diameters and smaller foundation dimensions, thus reducing the cost.

Information on other designs, twin-bracket arrangements, pole accessories, etc., available from your distributor.

Prices on request.

## Hubbard Street Hood Brackets

Hot Galvanized

Luminaires and mounting bolts are not included and must be ordered separately.

## Bent Arm Type

No. 23710

By interchanging scrolls, pole plates, pipes, and clips, practically any form of bent arm type bracket desired may be assembled.

Made of 1¼-inch pipe. Pipe thread attachment, 1¼ inches. Extension from pole, 48 inches.

Assembly No.	Per 100	Pole Plate No.	Pipe No.	Scroll No.	Scroll Clip No.	End Fitting No.	Ship. Wt. Lb. per 100

## No. 3303 Hubbard Spear Point Rigid End Fittings

Durable and decorative.

Thread for attachment to 1¼-inch pipe and for 1¼-inch luminaire attachment.

Shipping weight per 100, 300 pounds.

No. 3303 ..... per 100 \$250.00

## Hubbard Levelite End Fittings

Designed to provide a much needed flexibility on street lighting installations.

The ball and socket movement is sealed from moisture by a lead gasket and rigid setting of position is maintained by tightening the spear-head bolt and lock nut.

The ball is prevented from rotation in the socket while attaching the luminaire by a lug.

An adjustment of 17° from vertical, in any direction, is possible.

## Hubbard Presteel Trolley Mast Arms

PATENTED

## Type 28—Chain Operated

Hot Galvanized

Carriage on arm is operated by a continuous bronze chain which is protected by a 12-gage steel arm housing. All movable parts equipped with brass bushings. Tension on chain is provided for by rod and thumb screw at pole end. Sprocket mechanism, consisting of crankshaft and sprocket in movable frame, operates freely under varying conditions.

A non-ferrous sprocket wheel is constructed with teeth specially formed to follow the chain. Locking device holds mechanism against any movement from undesirable sources.

Chain is pre-stretched to 175 pounds. Chain rides in guides which have been placed at top of carriage.

Pipe thread attachment,  $\frac{3}{4}$  inch.

## Type 29—Rod Operated

The main difference between Type 29 and Type 28 arms is that the chain mechanism is replaced by a rod. To pull lamp toward pole, rod is lifted out of gravity lock by its handle and drawn out of arm housing. This operation reversed moves lamp forward again, locking it in place. Pole mounting bolts are not included.

## Hubbard Hook Adapters

Hot Galvanized

No. 3340  
No. 3341

No. 3340 is a hook adapter used either on the mast arm stud for hanging insulators similar to Nos. 1504 and 1534, or on the bottom of insulators such as No. 1524 for hanging the lamp. The pipe cap has standard  $\frac{3}{4}$ -inch pipe thread and the hook is formed to allow the entrance of  $\frac{1}{2}$ -inch stock or smaller. Inside diameter of the hook is  $1\frac{1}{8}$  inches.

No. 3341 is similar to No. 3340 except that the pipe cap is tapped for  $1\frac{1}{4}$ -inch pipe thread.

No.	Per 100	Hook Attachment Inches	Lamp Attachment Inches	Approx. Ship. Wt. Lb. per 100

## Hubbard Insulated Lamp Hangers

Hot Galvanized

With Suspension Type Insulators

No. 1504

No. 1505

No. 1514

No. 1524

No. 1504. A standard 6000-volt metal cap insulator with safety hook arrangement for locking arc lamp in place.

No. 1505. Similar to No. 1504 except that clevis with  $\frac{3}{4}$ -inch opening replaces safety hook.

No. 1514. Furnished with hook attachment for the lamp. For making attachments to a  $\frac{3}{4}$ -inch stud.

No. 1524. Similar to No. 1514 except that lamp attachment is a  $\frac{3}{4}$ -inch stud.

No.	Per 100	Hanger Attachment Inches	Lamp Attachment Inches	Ship. Wt. Lb. per 100
1504	\$675.00	$\frac{13}{16}$ Hole	Safety Hook— $\frac{1}{2}$ " Opening..	360

1592	350.00	$\frac{3}{4}$ Thrd.	Hook— $\frac{1}{2}$ " Opening.....	370

## G-E Traffic Signals

## Optical Units

Optical Unit with Reflector Swung Open

General Electric traffic signals all use the same interchangeable high efficiency optical unit.

The reflector is of high quality silvered glass protected with a coating of electrolytically deposited copper. The design is phantom-proof, thus eliminating the illusion that the signal is lighted which sometimes occurs when the sun is shining directly into a traffic signal.

Eight-inch lens is made according to I. T. E. specifications. The convex outer surface is smooth to prevent accumulation of dirt or snow, while prisms, designed to distribute the light outward and downward into the field of vision, are on the concave inner surface sealed from dust and dirt.

Channel shaped extruded rubber lens gasket keeps the entire assembly permanently dust-tight.

Fixed focus lamp socket insures the signal always being in correct focus. All traffic signal lamps today have the same accurate light center position, eliminating the need for adjustable sockets.

Optical Unit with Reflector Closed Against Lens

Aluminum visor shields lens.

Spring wire bail holds reflector firmly against gasket.

Scientifically designed reflector eliminates internal sun phantom.

Die cast aluminum door for long life.

Single latch screw provides adequate gasket pressure and easy accessibility.

Dark green baked enamel finish resists atmospheric conditions.

Combined socket and reflector holder assures that optical system is always in proper adjustment.

## Fixed Type

Three-Color, 4-Way Fixed Type, Span Wire Mounted

G-E fixed type signals have a light but strong aluminum framework which withstands shocks and minimizes the strain on span wires and mast arms. Like the adjustable type, the fixed signal doors are accurately die-cast from aluminum. The exact forming of the doors makes them easily interchangeable after accidents. The corner bars are held firmly in place by large screws and are shaped to form seats with the top and bottom castings for the felt gaskets against which the optical units are clamped.

The complete General Electric optical unit with its high candlepower, phantom-proof characteristics is used in the fixed signal. Since the signal door forms part of the optical unit, the whole assembly can easily be unhinged from the housing and moved to any desired new location. This flexibility is a great advantage when either the framework or an optical unit is damaged from accident. The hinge and latch lugs are solidly riveted to the corner bars.

The signals may be suspended from a span wire as illustrated, or they may be hung from mast arms or mounted on poles. Standard span wire and mast arm hangers and post top adapters are available, as well as ornamental pinnacles for the post type and base floodlights for the suspension type.

For streets which do not intersect at right angles, adjustable signals are recommended.

## Important Features

1. High candlepower, phantom-proof distribution through wide visual angle to reduce confusion and accidents.
2. Strong and light for long life of signals, span wires, and mast arms.
3. Fixed focus correct for all traffic signal lamps—cannot get out of adjustment.
4. Attractive, compact appearance with smooth painted finish.

## G-E Traffic Signals

### Adjustable Type

Three-Color, 2-Way Steel Post  
Top Adjustable Signal

G-E traffic signals are designed to meet the demands of all traffic conditions and to comply fully with the specifications of the Institute of Traffic Engineers.

The adjustable signal consists of single sections which are joined together by means of clamping plates and short bolts to form an attractive and highly efficient signal assembly. Each section has a strong weatherproof die-cast housing in which is mounted the famous General Electric optical unit.

The housing is strong so as to withstand the shocks of traffic accidents, and the light weight facilitates suspension mounting. These qualities mean low maintenance and replacement costs and save the time and expense of frequent repairs.

Each signal may have any desired number of complete sections, and only a small open-end wrench is required to add or subtract these units. The clamping device for holding the sections together consists of two flat plates through which three short bolts are passed. A large hole through the center of the plates provides plenty of room for wiring.

Two orienting bosses are provided so that the signals are perfectly aligned. The bosses can be removed so that the sections may be rotated with respect to each other. This method of assembling the signals has the advantage over tie rods or other commonly used arrangements in that it is not necessary to disturb the original signal if it is desired to add a walk light or arrow signal. New tie rods are not required, and the change is much more easily made with the short bolts and clamping plates.

## G-E Type DH Traffic Signal Controllers

Type DH Traffic Signal Controller Cabinet

Noninterconnected Type DH Controller  
for 2-Street Intersection

The Type DH traffic controller is a simple, flexible, economical, and scientifically designed equipment for the control of traffic signals. It can be used equally well for operating isolated intersections or interconnected systems. It is the logical answer to modern traffic control problems.

The Type DH controller can have as many as 15 signal circuits and 16 color intervals per total time cycle and can be arranged for any desired color sequence. The length of any interval is quickly changed from a minimum of 2 per cent up to any desired percentage of the total time cycle. The total time cycle itself can be varied from 30 seconds to 2 minutes. Relays may be included for the remote control of shutdown, flashing caution, or emergency all-red signals. A manual controller may be added for personalized control. If it is desired to interconnect the system, either single or triple-automatic reset may be employed for co-ordinated timing of the intersections. A remote cycle change attachment is available for increasing the total time cycle length of the entire system during periods of heavy traffic. In general, the Type D is the most adaptable type of traffic controller available.

**Note Particularly—**

**No. 1**—Constant time keeping speed is assured by the synchronous motor.

**No. 2**—The total length of the time cycle is determined by the size of the gear on the end of the timing dial shaft.

**No. 3**—The percentage of time of the total time cycle allotted to each interval is determined by the spacing of the keys in the front of the dial.

**No. 4**—The particular color sequence desired is determined by the particular segments which have been broken out of the Textolite drum cams.

**Cabinet**

The Type DH traffic controller is enclosed in an attractive weatherproof cast-aluminum cabinet. Pole clamps for metal pole or pole plates for wooden pole mounting are included. A lock and key make the installation tamper-proof. The finish is an attractive green that blends well with surroundings.

The equipment inside the cabinet consists principally of two parts, the timer and the panel. The timer hangs on a bracket so that it can be swung out of the cabinet for inspection purposes while in operation. All connections to the timer are made by means of a jack connection block. By disconnecting the jack connection block and lifting the timer off its supporting bracket, the entire timer may be removed from the cabinet and another timer substituted, if it is desired to make any major changes. The panel is rigidly mounted in the lower part of the cabinet and is used for mounting connection terminals, switches, relays, etc.

Front of Type D Timer

Note how the timing adjustments and basic control switches are conveniently grouped for quick and easy operation.

## G-E Type DH Traffic Signal Controllers

### Type DH Timer

**Interior of 6-Circuit Timer**

Note simplicity of construction and full accessibility for inspection and servicing.

The Type DH timer is the basic element of this complete line of controllers. It consists essentially of four fundamental parts—(1) the motor, (2) the timing dial, (3) the solenoid, and (4) the drum and contact assembly.

#### Motor

A telechron synchronous motor provides the driving power. Because the motor is of synchronous design, it is possible to keep adjacent intersections in step with each other according to any predetermined plan without the necessity of interconnecting cable. Sealed-in lubrication is provided for the life of the motor. The power consumption is only 6 watts. The pinion gear on the motor shaft revolves at 2 rpm.

#### Timing Dial

The timing dial on the front of the timer is driven at one revolution per total time cycle by a single spur gear which is mounted on the end of the timing dial shaft and which meshes with the pinion gear on the motor shaft. The total time cycle of the timer is determined by the size of this single spur gear. The motor is swung out of the way temporarily to make this simple adjustment. Standard cycle timing gears are available in 5-second increments from 30 to 90 seconds and in 10-second increments from 90 to 120 seconds. Any five of these gears will be furnished with each controller.

On the front face of the timing dial are 100 slots dividing the total time cycle into 1 per cent steps. Keys which are inserted in these slots divide the total time cycle into various intervals. The total time cycle may thus be split into intervals which take up as much of the total time cycle as is desired. As the dial revolves, these keys pass through the zero position which is marked by an arrow in the casting directly above the timing dial. They momentarily close the drum advance contacts and the impulse produced by the closing of these contacts energizes the solenoid which, in turn, raises the solenoid armature. When the impulse is cut off, the armature falls and the ratchet on the end of the drum assembly is turned forward one position.

#### Drum and Contact Assembly

On the drum shaft are slotted discs of Textolite, one for each contact. Signal contact arms ride on the edges of the slotted drum cams, and open or close the various circuits as the drum advances, according to the way the cams are broken out. In so doing, they switch the signal lamps on or off. Six signal contacts are furnished as a minimum, but provision is made for adding up to a total of 15 signal circuits. The large 10-ampere contacts are made from fine sil-

ver and are fastened on a rigid arm. Constant pressure is maintained on the contacts by means of a helical spring. Because of the hinge-type design, there are no pigtail connections or leaf springs to become broken or lose their tension. This timer has ample capacity for extra signal circuits, walk lights, arrows, bells, etc.

Standard ratchets and corresponding slotted Textolite cams are available for 6, 9, 12, or 16 intervals. If a color sequence is desired with an intermediate number of intervals, this is achieved by making two or more succeeding intervals on the drum assembly the same. The total number of keys in the outside row of slots in the timing dial must be the same as the number of intervals on the ratchet of the drum assembly, in order that the dial and drum will keep in step.

As a further assurance that the timing dial and drum assembly always will be in step, the first contact on the drum assembly is used as an interlock. When the drum assembly is turned to mainstreet green, the interlock contact opens, thus making all of the short timing keys on the timing dial inoperative. However, the special green key inserted at the end of the main-street green interval is arranged so that it will operate the solenoid even with the interlock open. Thus, the drum assembly will hold up on main-street green until released by the green key, at which time all parts of the timer are in step.

#### Flashing Mechanism

A flashing mechanism for producing 60 flashes per minute, regardless of the time cycle on which the controller is operating, can be mounted on the motor support. The large fine silver contacts provide full 10-ampere a.c. flashing duty rating.

#### Switches

On the face of the timer are three tumbler switches. The first is used for signal shutdown. The motor, however, continues to operate, so that the signals will be in step with adjacent intersections when the signals are turned on again. The second is used when it is desired to operate the controller manually for special circumstances, such as around schoolhouses, etc., where the personal supervision of a traffic officer is required during certain periods. The third switch is for control of the motor. By means of this third switch, it is possible to start noninterconnected controllers operating in a definite relationship to each other. By virtue of the synchronous motor drive, they will remain in that relationship.

Just below the dial is an indicator which automatically shows on what total time cycle the timer is operating.

## G-E Type DH Traffic Signal Controllers

Removal of timer from housing is easy, because of this jack connection block.

The hand-switch accessory is attached to these terminals (standard equipment).

Transfer terminals (standard equipment) provide for flashing either amber or red, as preferred, on the cross street.

Power - supply terminals - "hot" side fused.

Excellent insulation and long life are features of the strong, molded Textolite panel.

Transfer to flashing operation is made with a convenient push-pull switch.

Relay jacks installed here when required. All relays are jack-mounted for easy removal.

These heavy brass terminals are easy to wire. They are furnished with soldering lugs. Insulation barriers are between the terminal blocks.

The Equipment Panel

### Panel

The molded Textolite panel is mounted in the control cabinet below the timer. A standard panel is furnished in all controllers with provision for accommodating up to 15 signal circuits, flash and shutdown relays, etc. On the right-hand side of the panel is a manually operated switch used for transferring the controller from regular stop-and-go operation to a flashing warning signal.

Manual Control

At top of the panel are transfer terminals which can be arranged so that when the controller is flashing, either the cross-street amber or the cross-street red signals will be flashing together with the main-street amber signals.

On the upper left-hand corner of the panel are terminals for attaching a manual control. With this accessory, a traffic officer can operate the signals after flipping the automatic to manual transfer switch on the front of the timer. It consists of a simple grip switch enclosed in soft vulcanized rubber, with sufficient cord to enable the officer to move about freely and take positions where he can see traffic to best advantage. The sequence of colors is the same as that obtained with automatic timing, the changes being made simply by squeezing the handle. Power terminals for the controller are located on the lower left-hand corner of the panel with the hot side of the line fused. Along the bottom of the panel are terminals for the signal circuits.

### Relays

Relays can be furnished for mounting on the panel for remote control of special features throughout an interconnected system from a central point.

Flash and Shutdown Relay

A remote shutdown relay accomplishes the same purpose as the manual shutdown switch on the face of the timer. Relays for remote control of flash may be used to eliminate the necessity of having policemen assigned to the duty of transferring signals from "stop-and-go" to "flashing" operation each evening and morning. One double-pole relay is required for each two circuits to be flashed. The operation of an all-red emergency fire control indication is accomplished in exactly the same manner as the remote control of flash. In this case, it is likewise necessary to include a double-pole relay for each two red circuits to be operated.

Automatic Time Switch

### Automatic

Time switch control of certain features is used in some cases in preference to manual or remote control. For signal shutdown, the contacts in the time switch itself can be used for shutting down the signal. For time switch operation of flashing amber, it is necessary, in addition to installing the time switch, to also include remote control relays used in the same manner as for remote control of flash.

### Automatic Single Reset Equipment

Wiring Diagram for Single Reset

Automatic single reset equipment in Type DH controllers consists essentially of a pair of normally open contacts, which are momentarily closed once each cycle, plus a braking coil in each of the intersection controllers. The master timer includes a pair of normally closed contacts which are momentarily opened once each cycle. These are connected as shown in the accompanying diagram. The operation is such that, when the braking coil is energized, the timing dial stops until the braking coil is again de-energized by the opening of the master contacts.

In those interconnected controllers which do not have remote cycle change, the braking coil takes the form of a second motor mounted on the same shaft as the driving motor. When this is energized, a torque equal and opposite to that of the main driving motor is applied to the armature, and the motor shaft comes to a dead stop, as well as the timing dial.

With interconnected controllers having remote cycle change, this braking coil takes the form of a magnetically operated clutch which disconnects the motor from the timing dial, thus stopping the dial, although the motor continues to operate.

The master timer applies a potential to the interconnecting reset wire, except for a brief instant at the beginning of its own main-street green interval.

A reset key is inserted in the inner row of slots on the timing dial of each timer. This key occupies the zero position on the master timer dial, but is offset on the various intersection timer dials by the amount of time each receiver is supposed to lag the master, expressed as a percentage of the total time cycle that is being used. For example, if an intersection timer were required to lag 15 seconds behind the master on a 60-second total cycle value, its reset key would occupy the 25 per cent lag position.

A system equipped for automatic reset will get into step within two cycles after it is started. Any intersection timer that is out-of-step, or that happens to become out-of-step later, will be stopped as soon as its reset key closes its reset contacts, and will remain stopped until the master timer momentarily de-energizes the reset interconnecting conductor. When all timers are in step, the closing of the intersection contacts and the opening of the master contacts occur simultaneously, and all timers, operate without interruption. This system does not require a "dwell" period in each cycle, so that the timing of each cycle and the timing of each color interval is precisely that for which the timer is set.

## G-E Type DHR Traffic Signal Controllers

Type DHR Interconnected Synchronous Controller

Interior of Type DHR Controller

Lever for selecting proper total time cycle length for remote-cycle-change system.

Relays for automatic selection of remote-cycle-change and triple-reset timing.

Sequence switch for selecting of long cycle, short cycle, or automatic triple reset.

Reset switch for selection of automatic operation or manual selection of any of the three triple-reset schedules.

Two time switches make it possible to have the selection of all three triple-reset circuits completely automatic when traffic conditions warrant.

## Typical Type DHR Master Controller

To provide a means of handling more traffic per hour, General Electric has developed the Type DHR controller—a timer flexible enough to be adapted to varied conditions.

The Type DHR controller is similar to the Type DH controller, equipped with Type SMY synchronous motor and electric-impulse-operated clutch, to provide control of time cycle from a master controller. Usually equipped with triple reset equipment and flash and shutdown relays.

## Remote Cycle Change

A total time cycle that is of the correct length for average traffic flow may be too short to handle peak conditions during rush hours or icy weather. When traffic becomes heavier vehicles cannot move at the speed for which the system is set, and traffic jams at every intersection. The timing must be lengthened to accommodate the increased volume by lengthening the total time cycle, so that more vehicles can clear the intersection without stopping.

General Electric remote-cycle-change equipment is specially designed to meet this requirement in cases where the volume of vehicles varies considerably during the day. It consists of a master timer, a 2-wire interconnecting cable, and interconnected synchronous controllers.

## Type DHR Master Timer

The master timer sends out impulses by means of a ratchet wheel which alternately opens and closes a pair of contacts. The rate at which these impulses are emitted depends upon the speed of the ratchet, and this speed is determined by a shift lever and a cone of gears. Since the total time cycle is determined by 16 gears, it can be adjusted in 5 or 10-second

Diagram of Clutch Mechanism

increments between the limits of 30 and 120 seconds. The master timer—with either manual control or automatic time-switch control—can be installed in any central location.

The impulses from the master timer actuate a magnetically controlled clutch in the intersection controllers. This slows down the timing dials without affecting the constant speed characteristics of the synchronous motors. There is no "dwell" period at the end of each cycle.

Diagrammatically the clutch mechanism is shown above.

Timing-dial speed is controlled by a simple clutch which is spring-mounted on the end of the rotor shaft and connected to a rotor bar. The rotor shaft is geared to the synchronous motor. As the rotor bar revolves, it passes by the pole face of an electromagnet. Should the magnet be energized, the bar will be moved toward it to open the clutch teeth and prevent the timing dial from turning. If the magnet is de-energized, the rotor bar will be released to re-engage the clutch and revolve the timing dial.

When the magnet is repeatedly energized and de-energized by a series of impulses from the master timer, the timing dial will revolve at a lower speed than if no impulses are present to operate the clutch. When no impulses are being sent out, the intersection timers operate at their conventional speed, which depends upon the size of the time-cycle gear in each timer. Normally, a system will operate at base speed most of the day, the remote cycle change being used only during periods of heavy traffic or wet or icy weather.

In the interconnected systems, installing remote-cycle-change equipment is simple. Attachments can be made to existing intersection controllers with serial numbers over 19,000 or included in the new Type DH timers.

## G-E Type DHM Triple Dial Controllers

Type DHM, 3-Dial Traffic Controller, without Front Door

Type DHM, 3-Dial Traffic Timer, without Covers

## Construction Details

The Type DHM is essentially the same as the Types DH or DHR in its construction and operation, using the same kind of a driving motor, solenoid and ratchet mechanism, and the same type of drum and contact assembly. It can be furnished either as a noninterconnected or interconnected controller with remote cycle change and triple reset.

The multidial controller contains two or three separate timing dials, each with its own dial contact block. All dials are geared together and rotate simultaneously at the same speed. The dials are driven by one synchronous motor, the speed of rotation depending, as in other controllers, upon the size of the time cycle gear mounted in the timer.

The multidial controller has greater flexibility than a single dial controller for coping with changing traffic conditions. It is extremely useful in straightening out problems both at isolated intersections and in interconnected systems.

If, at some time during the day, conditions change so that main-street traffic increase while cross-street traffic decrease, a different "percentage split" of the total time cycle, making the green interval length correspond to the volume of traffic, is desirable to minimize waiting time on the cross street. This arrangement, with the main-street green lengthened and cross-street green correspondingly shortened, can be set up on Dial No. 2. If a third percentage split is required, it can be set up on Dial No. 3.

Since these different splits can be preset on the dials, then, by means of external switching (manual switches, time switches, or a program drum), the correct percentage split can be selected simply by switching to the dial with the proper lengths of green intervals.

In a complete interconnected system with remote cycle change and triple reset, the use of one or more Type DHM multidial controllers can greatly increase the system's flexibility. For example suppose one had been installed in the system at an intersection where traffic conditions change about the same as those at the isolated intersection just discussed. Here, in addition to using remote cycle change for long and short total time cycles and the triple-reset feature for controlling the "in" and "out" traffic along a main thoroughfare, it is also possible to take care of the change in percentage of cross-street and main-street traffic.

If all the controllers in the interconnected system were multidial controllers, it would be possible to take care of a multiplicity of conditions—practically any of a predetermined nature, because, with the Type DHM, it is possible to switch to any of the three resets when the controller is operating from any dial. It is also possible to switch to any of the dials when using any one of the resets. In other words, the selection of resets is entirely independent electrically from the selection of dials, though some traffic conditions may require both to be changed at the same time.

Similarly, it is possible to select different system time cycle lengths by the remote-cycle-change equipment while using any or all of the previously mentioned combinations of dials and resets. This increases the flexibility still more.

Manual or automatic selection of dials can be made along with selection of system resets and system time cycles at the master controller. This is particularly true if more than one multidial controller is used in the system.

If there is only one multidial controller in the system or the Type DHM is to be used as an isolated intersection controller, automatic dial selection can be done locally by time switches.

## G-E Type DJ Traffic Controllers

The Type DJ is a condensed model of the standard Type DH traffic controller. It is especially designed for isolated intersections because it does not contain the space for accessories necessary for interconnected operation. The timer and panel are enclosed in a weatherproof cabinet 16 inches high by 12 inches wide by 8½ inches deep. The

timer is driven by a synchronous motor which provides for progressive traffic movement without requiring interconnecting cable between intersections.

Five gears are furnished, giving a choice in total time cycle of 40, 50, 60, 70, or 80 seconds. Optional gears are available for any cycle lengths between 30 and 180 seconds in 5-second steps, and between 80 and 120 seconds in 10-second steps.

The controller contains six independent signal circuits which can be individually adjusted to give any desired color sequence by breaking out Textolite cam segments.

The lengths of all color intervals can be adjusted to any desired values by moving keys in a calibrated dial in 1 per cent steps.

Manual switches are provided for separate control of the signals, the motor, the flashing operation, and the transfer from automatic to manual operation. When the controller is furnished without flasher contacts, the flash switch becomes a steady caution switch. Terminal changes can be made so that the signals will flash either red or amber to the cross-street with amber to the main-street.

In general, the Type DJ is a flexible, compact controller especially suited to isolated intersections where interconnection is not necessary.

If, however, there is any possibility of future interconnection or future additions of features, such as pedestrian control, the Type DH controller is recommended.

### Triple Reset

A triple reset system should be considered whenever the traffic controlled section of a thoroughfare is quite long and the traffic volume varies greatly in direction during different periods of the day. The equipment consists of a master timer, a 4-wire interconnecting cable, and an intersection receiver timer. Even though the system is similar to a remote cycle change system, triple reset is designed for a different purpose. If the system has both triple reset and remote cycle change, one 5-wire cable is sufficient.

By providing three different schedules of co-ordinated timing, it is possible to move inbound peak traffic, normal traffic, and outbound peak traffic on any arterial street more efficiently. Manual or automatic control can be used to select any one of the three predetermined schedules of green light lag.

During morning traffic hours, the master timer selects the inbound reset that favors movement toward the business and factory area. Green lights are then timed to move inbound traffic faster with but slight delay to the lighter outbound movement.

During the normal traffic part of the day, signals operate on an average sequence to move traffic with smooth, progressive flow in both directions.

To handle afternoon and early evening peak traffic, the master timer selects the third schedule of co-ordinated timing—a green light timing scheme that speeds up the outbound movement.

The equipment in the master timer is the same as in the intersection timers, with the addition of supervisory contacts and a single-pole, triple-throw switch. In the intersection controllers, the equipment is the same as in the noninterconnected controllers, except that there are three pairs of reset keys—red, white, and yellow—which are so slotted that each key will close only one pair of contacts.

## G-E Traffic Beacons

Beacons are used as a visual warning of danger points to motorists and pedestrians. Brilliant flashes of light from these beacons capture the attention, warning the motorist that caution is necessary. They use the same high efficiency optical unit as G-E traffic signals.

### Adjustable Type Beacons

The adjustable beacon uses one or more of the standard G-E signal section units. These are held by bracket assemblies that can be arranged for turning separate units in whatever directions are required. Can be supplied for mounting from a span wire, mast arm, or post top.

### Fixed Type Beacons

Fixed type beacon uses a rigid frame mounting, giving a warning indication in two, three, or four directions, as may be desired.

Can be supplied for mounting from a span wire, mast arm, or post top.

Red or amber lenses may be used.

### Weatherproof Flasher Mechanisms

Complete in enclosing case.

Can be mounted on the pole from which the beacon is suspended. This arrangement gives best accessibility for servicing the flasher. A synchronous motor drive is used to operate the same heavy duty flashing contacts used in the G-E Type DH controller.

Fuse protection and a key-operated switch which can be turned without opening the housing are included.

### Special Flasher Mechanisms

Will fit in the fixed type beacon only. May be used to make an installation complete in one unit.

Radio interference suppressors are included in both flashers.

Traffic signal poles are available in a variety of designs constructed of steel or cast iron. One may be chosen which matches or harmonizes with local lighting standards. These poles can have a 4½-inch diameter tenon top to accommodate a slip fitter type of signal or have a pipe nipple mounting.

## American Concrete Traffic Signal Poles

Concrete traffic signal poles are available in a variety of designs. One may be chosen which matches or harmonizes with local lighting standards. These poles can be furnished with 4½-inch diameter tenon top to accommodate a slip fitter type of signal or with a pipe nipple mounting.

## Crouse-Hinds Traffic Signals

## Design

Front View

Crouse-Hinds offers a complete line of newly designed traffic signals which is in keeping with the trend of modern design. The modern straight line motif is carried out in the entire design.

Every detail of design has been carefully considered, not only from the artistic standpoint, but also for efficiency and durability. Particular care has been given to the optical system, with the result that the light output or strength of signal indication is much greater than that of competitive signals.

## Materials

**The casing, door, and hood** are made of special silicon aluminum alloy, cast in steel dies under great pressure. Such construction insures a uniform and homogeneous casting of great strength, capable of resisting corrosive atmospheres, including salt air. Castings are extremely accurate and similar parts are interchangeable on all signals.

**The red, amber, and green lenses** are selected especially for purity of color and high transmission. The outer surface of the lens is smooth, which makes cleaning easy, while on the inner surface there are prisms for distributing the light downward and to the sides.

Rear View

## Body Construction

The bodies of the new Crouse-Hinds signals are of unit sectional construction, which features an individual body casting for each optical system. This insures a rigid, compact casing which is dust-tight and watertight. Signals of two, three, four, or five sections may be built up as desired.

**Unit construction**, with complete interchangeability of parts, is of great benefit to cities using any quantity of signals, since any desired combination and arrangement of signal bodies can be made up locally.

Door and hood are cast in one piece, which saves assembly on the job. Doors with separate hoods of sheet aluminum can be furnished on special order.

## Reflector Assembly

**The reflector** used in the new Crouse-Hinds signal is an extremely accurate, parabolic reflector made of polished glass, silvered to form the reflecting surface, which in turn is protected by a heavy layer of electrolytically-deposited copper. Over this copper are placed the protective backings which completely seal the reflecting surface.

Instead of glass reflectors, Crouse-Hinds is prepared to furnish high-efficiency Alzak finish aluminum reflectors at no increase in price. The reflectors used in Crouse-Hinds signals are the finest and most efficient available.

The reflector is mounted in a spider which also holds the lamp receptacle, and is hinged to the casing. The lamp receptacle is adjustable so that lamps of varying light center lengths may be used. The receptacle is equipped with a lamp grip to prevent the lamps from loosening due to vibration.

**In a normal position**, the reflector assembly is rigidly fastened to the casing and does not have to be disturbed for relamping. This eliminates breakage due to repeated handling. When access to the rear is wanted, it is only necessary to loosen the single catch and swing the door outward on its hinges.

The lamp receptacles are equipped with wires having colored, coded braids, which greatly simplifies installation.

## Crouse-Hinds One-Section, Four-Way Beacons and Signals

Without Motor Flashing Switch

Schedule T

†With Amber Unlettered Type T or Special Lenses

Crouse-Hinds one-way, one section beacons and signals are similar in all respects to standard traffic signals, except that they have only one section instead of the usual three.

All beacons except TSE-111D are regularly equipped with amber, unlettered combination lenses. Type TSE-111D is equipped with WALK or ARROW lenses and is used for mounting beneath existing signals. They are furnished complete with 1¼-inch diameter pipe nipple, lead gasket, and check nuts.

Type TST-111D beacons are equipped with an auxiliary reflector and receptacle for illuminating an information or warning sign mounted on the supporting standard immediately below. Auxiliary reflector is designed to take any lamp not exceeding 3½ inches in diameter or 6½ inches in length. A standard 100-watt lamp is recommended. On the bottom of the type TST-111D beacon, there is a slip fitter for 2-inch pipe, cast as part of the beacon base. Set-screws are provided for fastening it to the 2-inch supporting pipe.

Type	No.	Each	Mounting	Lens
TSO-111D	46402	\$16.00	Without any Mounting Attachments	Amber
TSW-111D	42657	21.20	Span Wire	Amber
TSM-111D	42658	25.80	Mast Arm	Amber
TSP-111D UG	42659	22.20	4-Inch Post, Underground Feed	Amber
TSV-111D	42663	20.20	Vertical-Bracket, with Top Arm Only, less Pole Clamps	Amber
TSE-111D	46372	18.80	1¼-Inch Nipple in Top with Hood	WALK
TSE-111D	46373	18.80	1¼-Inch Nipple in Top with Hood	Vertical Arrow
TSE-111D	46374	18.80	1¼-Inch Nipple in Top with Hood	Right Arrow
TSE-111D	46375	18.80	1¼-Inch Nipple in Top with Hood	Left Arrow
TST-111D UG	46380	30.20	2-Inch Post with Sign Reflector and Glass Door	Amber

Prices do not include incandescent lamps, motor flashing switches, or radio interference suppressors.

If hoods are required, they will be furnished without extra charge.

†Lenses of any standard color can be obtained without extra charge. Lettered lenses can be furnished at an advance of \$1.00 per lens in the price. For each lens omitted, deduct \$1.00 from the prices.

†Beacons for 1½-inch nipple mounting can be furnished, instead of 4-inch post mounting at a decrease of \$5.40 in the prices.

## Crouse-Hinds Automatic Synchronous Controllers

Schedule T

## Jack Mounted—Weatherproof Cabinets

\*With Gear-Shift—Adjustable Time-Cycle, 40, 50, 60, 70, and 80 Seconds

†10 Amperes, 115 Volts, 60 Cycles A.C.—6 to 15 Color Circuits, 16 Intervals

Type KS-1  
Mounted in Size 16 Cabinet

Type GS-4  
Mounted in Size 22 Cabinet

## Types KS-1 and GS-4 Non-Interconnected Synchronous

The non-interconnected type should be used at adjacent isolated intersections. Such controllers will keep in step with each other and provide a limited progressive traffic movement. They can be left running 24 hours a day or can be shut down or turned to flashing by means of time switches. All non-interconnected controllers are equipped with manual reset circuits. At the time of installation of such controllers, it is well to consider the possibility of future interconnection; and, if this is likely, the future-interconnected type should be purchased since the small additional cost would easily be justified.

## Type GS-4 Future-Interconnected Synchronous

Often cities desire to install a signal system, but lack sufficient money for the purchase of cable. The future-interconnected type of controller solves the immediate problem since the signals and controllers may be installed and the interconnecting cable purchased later. Such controllers are similar to the non-interconnected type except that they are designed and wired for interconnection later.

The terminal board is designed for interconnection; fuse clips for the interconnecting cable are furnished and the remote-control relay subbases for signal shut-down and flashing are installed and wired complete. The automatic reset circuit is also added. Only the remote-control relays are not supplied with future interconnected controllers. They may be purchased at the time of interconnection and mounted on the relay subbases.

## Type GS-4 Interconnected Synchronous

The interconnected type GS controller is the one most generally used in the congested portions of cities and on long thoroughfares leading thereto. Such a system permits progressive signal operation and provides all of the necessary features for perfect control except control of the time-cycle from the master.

By running an interconnecting cable between the controllers, the following additional features may be incorporated in the system: automatic reset, remote shut-down, remote flashing, and remote emergency all-red. In addition to the common wire, one positive wire in the cable for each remote-control feature.

### Timing Units For Synchronous Controller

The timing-unit motors of both controllers are of the low-speed, disc type, revolving at approximately 300 revolutions per minute.

All shafts are equipped with ball bearings.

The magnetic circuit of the motors is of laminated construction, and the result is a highly efficient motor, having a very high torque with a low wattage input.

This type of motor has proven successful in traffic signal controller operation for more than 20 years.

The synchronous timing-unit for Type KS-1 and GS-4 is the same.

### Cam Units For Color Sequence Flexibility

Features excellent design, simplicity, and accessibility.

The cam-unit motor receives impulses from the dial contacts and drives the cam-shaft forward one position at a time.

Has a powerful, ball-bearing type motor equipped with an electro-dynamic brake to prevent coasting.

Provides a maximum of 16 intervals, but any lesser number may be used by resetting the cam-lobes. This can be done in the field without tools.

Cam-Unit with  
Cam-Shaft Removed.

The cam-unit of KS-1 controller is limited to 6-color circuits while that of the GS-4 controller will accommodate 15-color circuits. These color circuits are in addition to the necessary control circuits for interlock and interval indexing.

If cabinet is not desired, deduct \$25 from the price of complete controller.

Prices include brackets for wood-pole mounting or adjustable pole bands for steel-pole mounting. Standard 4-inch pedestal adapter, \$8.00 additional.

\*May be furnished with gears for other time-cycles.

†For 25, 40, and 50 cycles, add \$10 to the prices. Write for information on special voltages that are available.

Switch Only

Switch in Size 12 Cabinet  
(Door Open)

Size 12 Cabinet  
Steel-Pole Mounting  
With Adjustable Pole Bands

Size 12 Cabinet  
Wood-Pole Mounting  
With Wood Pole Straps

Type TSS-18 has large diameter, widebreak, non-corrosive metal contacts and will handle an incandescent lamp load of 10 amperes. It is driven by a variable speed induction-disc motor, the magnetic circuit of which is laminated throughout, thus giving high torque at low wattage input.

The speed of flash may be varied between 20 times a minute and 60 times a minute.

In addition to the motor flashing switch itself, a terminal block with properly identified terminals for all field connections is provided. A set of fuse clips for the hot side of the power line is mounted on the terminal block.

The entire switch assembly may be removed as a unit from the cabinet to facilitate installation.

**Cabinet:** Type TSS-18 motoring flashing switch is mounted in a cast aluminum, weather-proof cabinet, equipped with a heavy duty brass lock. The hinged door of the cabinet is equipped with a gasket to exclude dust and moisture.

**Radio Interference Suppressor:** Type TSS-18 motor flashings switches are listed below with and without radio interference suppressors.

## Crouse-Hinds Pedestals and Poles

## Schedule P

The poles and pedestals listed on this page consist of an ornamental cast Feraloy base with a shaft of tubular steel.

The short 34-inch pedestal is equipped with a shaft of either 3 or 4-inch diameter pipe, and is designed for mounting control cabinets. The longer poles, for mounting signals, have a tubular steel shaft of 4-inch pipe and are furnished with an overall height of from 5 to 10 feet.

These poles and pedestals should, of course, be mounted on concrete foundations. They require four foundation bolts,  $\frac{3}{4}$ -inch in diameter and 16 to 18 inches long. The foundation bolts are not included in the catalog numbers listed below.

In the ornamental base, there is a door which is fastened to the base with machine screws. The opening of this door is  $8\frac{1}{16}$  inches high,  $2\frac{1}{2}$  inches wide at the top and  $10\frac{3}{4}$  inches wide at the bottom. This large opening provides ample room for making splices.

## Edwards Centrally Controlled Program Clock Systems

## CLOCK AND PROGRAM SYSTEM

## A Typical System

Edwards complete clock systems feature Telechron dual-motored, self-starting synchronous movement which operates without contacts, rectifiers, master clocks, relays, pendulums, keys or switches.

All clocks, program instruments, and signals listed are approved by the Underwriters Laboratories for 115 volts a.c. Edwards units are designed for operation on 115 volts, 60 cycles a.c. operation, but, when specially wound, may be used on other voltages and frequencies.

The clock and program system illustrated consists of a program instrument, for single circuit or multiple circuit as required, and a resetting device (manual or automatic) built with dual-motored clocks and audible signals.

It is important that a resetting device be used in this clock and program system in order to permit convenient time correction after power service failure, daylight saving adjustment, etc.

## Program Instruments

No. 1918

## Multiple Circuit Program Instrument

If every room in the school operates on the same schedule of program every day of the week, a one-circuit program instrument will suffice. An additional circuit is necessary for every day that the schedule differs and when any grade operates a different daily schedule.

When the school that has only daytime sessions operates on any night schedule, a 24 hour program is standard. The multiple circuit program instrument is available in two, four, and six circuit sizes. Program is set by inserting pin in cylinder hole.

Signal duration is adjustable from two to six seconds.

The multiple circuit device No. 1918 (four circuit) is enclosed in a metal cabinet.

Single circuit program instrument No. 1910 is available for smaller installations.

No. 1910.....each \$255.00  
No. 1918.....each 560.00

## Resetting Units

No. 1902

## Automatic Dual-Motor Reset Unit

When clocks, signals, and instruments operate as a system with common current supply, the central control permits easy, accurate correction for power interruptions. The automatic power control measures length of power interruption and causes clocks to operate from a second motor at an accelerated rate to correct time.

Unit includes manual switches for daylight saving time corrections.

No. 1902 automatic control is enclosed in a metal cabinet with lock and key. Also available in manual control type No. 1900.

No. 1900.....each \$54.00  
No. 1902.....each 430.00

### Edwards Centrally Controlled Program Clock Systems

Edwards & Company manufactures a wide selection of signaling equipment.

The purpose of this listing is to show the best, the most practical, and the most dependable recommendation based on years of research.

In explanation: Synchronous clocks show the correct time at each second of the day and night, are noiseless, and are dependable. They are a logical and modern advance over the old "minute-jumper" clocks which were noisy and only changed time at each minute interval.

Automatic resetting with dual-motored clocks is certainly a modern necessity. It represents a minute fraction of the cost of any up-to-date building. A janitor, traveling from room to room with a step ladder, is a long and undependable process.

Manual correction from a central push button is a poor substitute.

Correction by overspeeding a single-motored clock is an unnecessary strain on wearable parts.

A program instrument is the only way to assure smooth, systematic, and punctual change of classes in any school, no matter how small.

Flush, 12-inch clocks are recommended. They cost no more than surface clocks and a well designed building deserves their neater appearance. The 12-inch size has proved to be best for all locations.

Room signals should be loud enough but not startling. The old idea of very loud corridor signals (and no room signals) is distinctly outmoded, first, because noisy schools are inefficient schools, and, secondly, because all rooms do not change at the same time. A chime is best, a buzzer in the clock case next best.

Loud signals should be used in such locations as gymnasiums, lavatories, swimming pools, vocational rooms, and outdoors. A 6-inch bell is best, a horn second best. Outdoor signals should be watertight and built to stand abuse. For added protection to outdoor signals, a hood is recommended.

Avoid confusion. There is no economy in trying to make one system do three jobs poorly, instead of one job well. Don't try to make program bells call the teacher to the telephone; don't risk lives by having "three rings" on the classroom bells warn a fire instead of having a fire alarm system designed for the job.

**No. 1962 Flush Wall Clock**

Has 12-inch dial for classrooms, corridors, etc.

Furnished with red sweep second hands, clear white dial, convex crystal glass.

Black Arabic numerals permit easy visibility from a distance.

Powered by Telechron synchronous, noiseless dual-motored movement.

Metal case has satin aluminum finish.

Can be used with No. 1900 manual reset or No. 1902 automatic reset control unit.

No. 1962.....each \$30.00

**No. 1978 Double Dial Clock**

Has 12-inch dial and is used in corridors, etc.

Can be suspended from ceiling or side wall as desired.

Especially desirable for use where time is to be seen from opposite direction.

Consists of two round, surface type clocks mounted by standard hangers to a center suspension unit.

Metal case has satin aluminum finish.

No. 1978.....each \$100.00

**No. 1972 Surface Clock**

Has 12-inch dial.

Furnished with red sweep second hands, clear white dial, and convex crystal glass.

Black Arabic numerals permit easy visibility from a distance.

Powered by Telechron synchronous, noiseless dual-motored movement.

Metal case has satin aluminum finish.

Can be used with No. 1900 manual reset or No. 1902 automatic reset control unit.

No. 1972.....each \$30.00

### Edwards Audible Signals

Edwards & Company has pioneered in the development and manufacture of audible signals since 1872.

Audible systems include surface or flush chimes for classrooms; buzzers for classrooms; adaptable for corridors, playrooms, lavatories, vocational rooms, and gymnasiums. For outdoor use, horns in locations where a bell signal is not desirable.

## Edwards Hospital Signaling Systems and Equipment

Hospital signaling systems are an absolute necessity in every modern hospital.

### Nurses' Calling Systems

Nurses' calling systems may be of either one of the following three types:

**LOCKING-BUTTON TYPE** in which the locking push button, suspended from a flexible, rubber-covered cord contains all the mechanism to actuate the audible and visible signals and to reset these when call has been answered.

**PULL-CORD-SWITCH TYPE** consisting of special toggle-type switch installed in the wall and operated by a pull-cord. This system is used in hospitals where low initial cost is a deciding factor; the operation of the pull-cord switch requires more effort on the part of the patient, and is sometimes not favored because of this.

### Psychopathic Alarm Systems

This type system is tamper proof so that the deranged patients cannot operate the system. By means of a switch outside the corridor, the attendant can make the calling station in each room operative before he enters the room. Then he can call for assistance in the event of an unruly patient.

### Doctors' Paging System

The services of the permanent medical staff and of visiting physicians are in constant demand in all hospitals. It is, therefore, important that a doctor be reached as soon as possible. When visiting in a hospital, he may have several patients requiring his attention, during which time a demand for his services may arise elsewhere.

To meet such a condition, the Edwards doctors' paging system enables three doctors to be paged at one time on any number of annunciators without disturbing patients.

### Doctors' In and Out Systems

In both large and small hospitals where the visiting doctors are likely to arrive at all hours of the day or night, it is important to know when a certain doctor is in or out of the building. To accomplish this, an electrical reset annunciator, with the required number of indications, is located in view of the telephone operator. In the main entrance or doctors' cloak room is located a similar annunciator with switches. The doctor, by throwing the switch opposite his name, lights the indicator, showing his name on both annunciators. Throwing the switch in the opposite direction extinguished the lights opposite his name in both instruments.

### Ambulance and Entrance Signaling Systems

Consist chiefly of the necessary push button, located at doors leading out of the building and a lamp-annunciator having a lamp signal for each location with buzzer as audible signal. Useful for night service.

### Nurses' Home-Calling Systems

These systems provide communication between office and the nurses' and attendants' rooms at their homes. Two types of systems may be used, viz.:

#### Return-Call Annunciator Type

#### Intercommunicating Telephone Type

In the return-call annunciator systems, nurses' or attendants' rooms are provided with a combination buzzer and push-button-station while at building office, a combination annunciator and push button board is installed. In this way the office may call the nurse and the nurse may answer the call by operating the corresponding push buttons.

Room stations may be provided with indicating drops which in nurses' absence remains visible until reset, indicating that a call has been made.

In the telephone call system the combination annunciator and push button board is provided with an operator's telephone and the room stations are replaced by telephones. The room telephone may be provided with indicating drop for the same purpose as stated above.

Hospital signaling equipment is approved by the War Department for Army Hospitals; Bureau of Yards and Docks for Navy Hospitals; and Department of The Interior for Indian Hospitals.

### Engineering Advice

Our engineering department—specialists in this particular field of signaling—will gladly co-operate with architects, engineers, hospital superintendents, etc., in charge of operation to lay out systems and make recommendations.

There is no charge for this service.

## Bryant Hospital Signal Devices

Bedside Calling Station

No. CS56  
Switch

No. CS258  
Switch

### Bedside Calling Stations

Operated by the patient; calls can only be cancelled at the bedside. Designed for use on 125 volts.

Furnished single gang or in combination with bull's eye, switch, power and radio outlets, etc.

Station switches, Nos. CS56 and CS256 (2 cords) with audible signal contact; and Nos. CS58 and CS258 (2 cords) without audible signal contact.

### No. CS50 Dome Lights

For use over private room or ward doors, corridor intersections, diet kitchens, etc.

Single dome with one light. Dome light has solid brass plate,  $4\frac{1}{2}$  inches square.

Requires one gang box not less than 1 inch deep.

## Edwards Lokator Systems

### Standard Twenty Call Lokator

The Edwards Lokator is an inexpensive, dependable system which through the medium of various signals located throughout a plant, store or office enables the telephone operator to quickly locate any person for a telephone call, etc.

The Lokator is operated entirely by low voltage irrespective of the voltage used to operate the signals. Its mechanism is driven by a small synchronous motor.

Crackled black finish is relieved in dull chromium.

The Lokator may be placed on the key shelf, on top of the switchboard or, preferably, on a shelf or table at the side of the board. It is light and portable. No mechanical or electrical connections to the switchboard. It is not necessary for the operator to remember code numbers. All names are typed on a cellophane protected strip directly above the selector lever.

The easiest, least expensive and most convenient method of wiring the devices may be used. Conduit, molding, etc., are not necessary.

### Power Units

The Power Units are standardized to provide the most desirable voltage operation of the system from either a.c. or d.c. lighting circuit.

A simple chart in the Edwards Lokator bulletin shows the quantity of signals one power unit will operate over a given distance and wire size. The system is unlimited as additional power units may be inserted into the line where needed.

### Sounding Devices

No. 562-6  
Bell Signal

No. 5001  
Chime Signal

No. 5031  
Light Signal

A wide variety of sounding devices is offered to cover all conditions; a soft musical note, a louder note, a sharp tone bell, a silent light flash, a blasting horn. Each one, however, is designed, rated and standardized for operation together. Again, there are no special problems.

The most commonly used of the sounding devices for all systems are the chimes. They have a pleasant musical tone to which the ear responds subconsciously, but which is not annoying.

The light signal is ideal for locations where no noise whatsoever is required and then the call is shown by the flashing light.

The specially designed bells give a clear, crisp tone and will stand many years of hard service.

## R&amp;S Unilarm Systems

## Explosion-Proof and Dust-Tight—Class 1, Groups C and D

## Vaportight and General Purpose

No. AEP3 Assembled

No. AEP2, Showing Plug-In Unit Removed

A standardized unit alarm system for the supervision of equipment and process operations. Provides, in one compact enclosure, the many features essential for complete, unfailing supervision.

All contact making devices are assembled on a novel plug-in panel that can easily be removed when relay adjustments or other maintenance problems arise. Spare plug-in unit may be inserted immediately to insure continuous operation.

## What Unilarm Does

1. Eliminates cost of designing and checking alarm circuit and elaborate wiring diagrams. The Unilarm circuit was standardized after exhaustive study and test, making it as simple to connect as wiring a switch.
2. Eliminates back of panel conduit and wiring required between separately mounted indicator lights, relays, reset switches, etc.
3. Eliminates failure to operate. Standard circuit normally is energized; completely supervised. Any failure in circuit causes alarm to operate.
4. Permits instant testing. Operation of test switch gives instant proof of the Unilarm readiness to function under alarm conditions.
5. Saves valuable space. Compact design requires no more space than the conventional pilot light.
6. Reduces installation costs to a minimum. Only one hole in panel per indicating light and switch is required for mounting.
7. Cuts maintenance to a minimum. No need of troubleshooting in cramped back of panel areas. Replace plug-in unit with spare—servicing of unit removed is performed safely and efficiently in the maintenance shop.

## Unilarm Operation

Operation of two and three-light Unilarm systems is fundamentally the same. When conditions are normal, the contacts of the alarm initiating device (thermostat, pressure switch, etc.) are closed\*, Unilarm relays are energized, and normal light is burning. If conditions become abnormal, the alarm initiating contacts open, Unilarm relays are de-energized, and the proper alarm light flashes rapidly on and off; also, an external howler, if used, is sounded.

The operator acknowledges the alarm by turning the acknowledgement switch of the proper Unilarm. This action silences the howler and causes the alarm light to stop flashing and to assume steady-state illumination.

When conditions return to normal, the alarm light goes out, normal light comes on, and Unilarm is reset automatically for another cycle of operation.

The system is primarily designed to indicate departure from a predetermined normal condition of temperature, pressure, level, etc. Many stages of indications can be arranged to suit conditions to be supervised.

Each Unilarm is completely independent. The functioning of one does not affect or impair the subsequent operation of another. Any number may be connected to a single howler circuit without the possibility of feed-backs occurring.

## For Panel Mounting

Description	Standard		3-Light		Three-Stage		Five Stage		Vital Motor Alarm	
	No.	Each	No.	Each	No.	Each	No.	Each	No.	Each
Explosion-Proof.....	AEP2	\$160.00	AEP3	\$190.00	AEP23	\$190.00	AEP35	\$250.00	MAEP24	\$225.00
Vaportight.....	AVT2	140.00	AVT3	165.00	AVT23	165.00	AVT35	225.00	MAVT24	200.00
General Purpose.....	AU2	125.00	AU3	150.00	AU23	150.00	AU35	210.00	MAU24	185.00
Replacement Parts										
Plug-In Unit.....	PU2	\$85.00	PU3	\$95.00	PU23	\$95.00	PU35	\$145.00	MPU24	\$120.00
Lens Assembly:										
Explosion-Proof.....	ELA	2.50								
Vaportight.....	VLA	1.50								
General Purpose.....	LA	1.50								

\*Can also be supplied for initiating devices with normally open contacts.

Standard lens colors are white (normal), green (low alarm), and red (high alarm). Specify color of lenses when ordering. Other colored lenses will be supplied when specified.

Furnished with lamps S6, 6-watt, 120-volt bulbs.

Unilarm can be furnished for surface mounting. Information and prices on request.

## Type EKP Crouse-Hinds Visularms

Explosion-Proof, Dust-Tight, and Weather Resistant (Raintight)

Class I, Group D (NEMA Type VII); Class II, E, F, and G; and Class III (NEMA Types IX, V and III)

Schedule CE

Three Horizontally Mounted Visularms  
Front View of PanelThree Horizontally Mounted  
Visularms, Back Feed Conduit  
Arrangement. Rear View of Panel.

Separated View

Type EKP Visularm is a complete compact unit used to supervise and control manufacturing processes in chemical plants, oil refineries, synthetic rubber plants and in other locations where constant control is necessary. The Visularm will indicate, by means of pilot lights, normal and abnormal temperature, liquid level, speed, load or any other condition which can be electrically coupled to the circuit. It is desirable to provide an audible indication of abnormal conditions and, therefore, the units listed are arranged to operate a howler signal such as one of the type ETH howlers.

Auxiliary circuits can be furnished to interlock with other devices or control process equipment. The Visularm includes the following electrical features as standard: 1. Jack-mounted panel completely factory wired and tested. 2. High speed flasher on alarm light. 3. Independent howler circuit. 4. Reset switch. Silences howler and changes alarm light from flashing to steady until fault is corrected. 5. Test switch. Permits periodic check of every device in the Visularm insuring proper operation under abnormal conditions.

**Two-Light Two-Position Visularm**  
For Normal and Abnormal Indications

## Signal Indications:

1. Normal—Bottom green light on. Top red light off.
2. Abnormal—Red light flashing. Howler on. Green light off.
3. Reset—Howler silenced. Red light on steady until conditions return to normal.

	Initiating Device Contacts		
	Normally Open	Normally Closed	
	No.	No.	Each

*Description			
†Complete Visularm	EKP32-1-J1-3	EKP32-6-J1-3	\$130.00
Jack-Mounted Panel	EKPU32-1	EKPU32-6	68.00

**Three-Light Three-Position Visularm**  
For Normal and High-Low Abnormal Indications

## Signal Indications:

1. Normal—Center green light on. Top and bottom red lights off.
2. Abnormal Low—Bottom red light flashing. Howler on. Green and top red lights off.
3. Reset—Howler silenced. Bottom red light on steady until conditions return to normal.
4. Abnormal High—Top red light flashing. Howler on. Green and bottom red lights off.
5. Reset—Howler silenced. Top red light on steady until conditions return to normal.

	Initiating Device Contacts		
	Normally Open	Normally Closed	
	No.	No.	Each

*Description			
†Complete Visularm	EKP43-3-J1-3-1	EKP43-7-J1-3-1	\$154.00
Jack-Mounted Panel	EKPU43-3	EKPU43-7	77.00

**Two-Light Three-Position Visularm**  
For Normal, Intermediate and Abnormal Indications

## Signal Indications:

1. Normal—Bottom white light on. Top red light off.
2. Intermediate—White and red lights on.
3. Abnormal—Red light flashing. Howler on. White light off.
4. Reset—Howler silenced. Red light on steady until conditions return to normal.

	Initiating Device Contacts		
	Normally Open	Normally Closed	
	No.	No.	Each

*Description			
†Complete Visularm	EKP32-2-J1-12	EKP32-8-J1-12	\$154.00
Jack-Mounted Panel	EKPU32-2	EKPU32-8	77.00

\*Standard unit arranged for 115 volts a.c., 60 cycles. Visularm can be supplied for other voltages and frequencies or other circuit arrangements. Prices on application.

†Visularm does not include howler. Type ETH howlers recommended. Pilot light jewels of colors other than those listed can be supplied. Information on request.

**Three-Light Five-Position Visularm**

For Normal, High-Low Intermediate and Abnormal Indications

## Signal Indications:

1. Normal—Center white light on. Top and bottom red lights off.
2. Intermediate Low—White and bottom red lights on steady. Top red light off.
3. Minimum Low—Bottom red light flashing. Howler on. White and top red lights off.
4. Reset—Howler silenced. Bottom red light on steady until conditions return to normal.
5. Intermediate High—White and top red lights on steady. Bottom red light off.
6. Maximum High—Top red light flashing. Howler on. White and bottom red lights off.
7. Reset—Howler silenced. Top red light on steady until conditions return to normal.

	Initiating Device Contacts		
	Normally Open	Normally Closed	
	No.	No.	Each

*Description			
†Complete Visularm	EKP43-4-J1-12-1	EKP43-9-J1-12-1	\$170.00
Jack-Mounted Panel	EKPU43-4	EKPU43-9	91.00

**Two-Light Four-Position Visularm**  
For Essential Motor Alarm

## Signal Indications:

1. Motor Off—Bottom green light on. Top red light off.
2. Motor On—Red light on. Green light off.
3. Thermostat on motor indicates high temperature—Red light flashing. Howler on. Green light off. Motor continues to run.
4. Reset—Howler silenced. Red light on steady. Motor running.
5. If motor temperature continues to rise—Magnetic starter trips. Green light flashing. Howler on. Red light off. Motor stopped.
6. Reset—Howler silenced. Green light on steady. Motor stationary until restarted.
7. Motor stopped intentionally—Green light on. Red light off. Howler silent.

	Initiating Device Contacts		
	Normally Open Contacts on Thermostat Extra NC Interlock Contact or Motor Starter		
	No.	No.	Each

*Description

## Viking Type M Pressure and Temperature Controls

Type MPC  
Pressure Control

Type MTC  
Temperature Control

Viking pressure and temperature controls are extremely accurate, dependable, and thoroughly service tested control instruments for general application in connection with fluids not injurious to copper or brass.

Sturdily constructed with a small number of moving parts. Straight line operation insures consistent accuracy. Effectively withstands excessive vibration and shock. Free from damaging effects of corrosion due to special corrosion-resisting treatments.

May be installed in any position without effect on accuracy or certainty of operation.

Factory calibrated in accordance with requirements, and controls are sealed against tampering to prevent any unauthorized changes in the control settings.

Installation is simple. No tools or special parts are needed.

### Electrical Ratings

Non-inductive loads: 1200 watts at 110-460 volts alternating current; 100 watts at 110-220 volts direct current.

Inductive loads: 300 watts at 110-460 volts alternating current; 50 watts at 110-220 volts direct current.

Furnished with single pole double throw switch contacts.

**Type MPC Pressure Control.** Designed for oil, water, and air pressures up to 100 pounds per square inch.

**Type MTC Temperature Control.** Designed for temperatures up to 250°F.

**When ordering,** specify type control desired, voltage of electrical circuit in which control will be connected, circuit current, and the pressure or temperature at which control is to operate.

Type MPC, Pressure Control.....	each \$30.00
Type MTC, Temperature Control.....	each 30.00

## Viking Types M-3-B and M-3-BA Safety Controls

### For Stationary Internal Combustion Engine Installations

Provides an audible and visual signal in case of insufficient lubricating oil pressure or excessive circulating water discharge temperature.

Self-supervising and fully automatic.

Both types include an indicator unit (with lubricating oil pressure control integral); a temperature control (for circulating water temperature); a warning howler; and an automatic throttle switch (if required). All parts are dust, fume, and moisture-proof.

Where warning howler may be mounted close to indicator unit, Type M-3-BA is recommended. Where conditions require that warning howler be mounted some distance from indicator unit, Type M-3-B is recommended.

**Indicator unit includes** pilot light (blue); two trouble source indicator lights (green), one each for oil pressure and water temperature; a pressure control (lubricating oil pressure); a test switch to provide a convenient means for testing warning howler at will; and a cutout switch for de-energizing the system manually to silence the warning howler in cases where it is desired to continue engine operation for a short period despite low oil pressure or high water temperature.

Indicator unit also serves as a junction box, and is furnished with a terminal block for electrical connections to other parts of the system and to the electrical power supply. All terminals are color coded to facilitate identification and to insure that connections are made in accordance with circuit diagram which is part of the installation instructions furnished with all Type M safety controls.

**Temperature control** Type MTC (see above) is installed in engine circulating water discharge line and is electrically connected to terminal block of indicator unit.

**Warning howler** is furnished as a separate unit in Type M-3-B. It may be mounted where convenient and is electrically connected to the terminal block of the indicator unit. In Type M-3-BA, the warning howler is integral with the indicator unit.

The warning howler provides a clear, unmistakable signal in case of low oil pressure or high water temperature.

**For engine-generator sets** having an output voltage of 250 volts or less, fully automatic operation is provided by connecting safety control system directly across generator terminals. Otherwise, fully automatic operation requires the use of an automatic throttle switch to automatically energize safety control system when engine is started up and to de-energize the system automatically when engine is shut down. The automatic throttle switch is mechanically connected to engine throttle control or to some other associated engine part providing the necessary minimum movement of 1/8-inch when engine throttle is advanced from the stop position to any run position. Fully automatic operation is necessary to eliminate the disadvantage and danger of dependence upon a manually operated switch for energizing the safety control system when the engine is started up and de-energizing the system when the engine is shut down.

When engine is in operation, and lubricating oil pressure and circulating water temperature are in the normal range, all lights of indicator unit are on and warning howler is silent. If lubricating oil pressure drops below operating point of pressure control or the circulating water temperature rises above the operating point of the temperature control, the pilot light and trouble source indicator light of affected circuit go out and warning howler sounds simultaneously.

Type M-3-B, With Automatic Throttle Switch.....	each \$144.00
Type M-3-B, Without Automatic Throttle Switch.....	each 121.00
Type M-3-BA, With Automatic Throttle Switch.....	each 148.00
Type M-3-BA, Without Automatic Throttle Switch.....	each 125.00

Type M-3-BA  
Safety Control  
(Indicator and  
Warning Howler)

Type M-3-B  
(Indicator)

Type M-3-B  
(Warning Howler)

Automatic  
Throttle Switch

## Edwards Industrial Fire Alarm Systems

Industrial fire alarm systems are particularly designed and suitable for factories, schools, colleges, public institutions, hotels, theatres, office buildings, department stores, warehouses, apartment houses, etc. in fact for every class of building where life and property should be protected from fire hazard, but with full consideration that such a fire alarm system must be dependable, yet simple and economical, both as to initial cost and maintenance.

Industrial fire alarm systems may be classified in 2 general types:

Electrically-Supervised Closed-Circuit Code and Non-Code Ringing for local drill alarm purpose and for connection to municipal fire alarm systems.

Non-Supervised Open-Circuit Code and Non-Code Ringing Systems.

### Closed-Circuit Systems

Under the closed-circuit systems the following may be furnished:

**PLAIN CODE SYSTEMS** in which the operation of a station lever causes all audible devices such as gongs, horns, etc. to sound a pre-determined code indicating the point of origin of the alarm.

**PRE-SIGNAL CODE SYSTEMS** in which the first operation of a station lever causes a code to be sounded on certain audible signals, known as pilots. The second operation of the station by means of a special key will cause the code to be sounded on all audible devices, both pilots and general.

**POSITIVE NON-INTERFERING CODE SYSTEM** features may be included in either the plain or pre-signal code systems mentioned above. These features prevent the jumbling of the code signal in the event of more than one station being operated at or about the same time.

**MASTER CODE SYSTEMS** in which one standard code is used this code indicating "Fire" but where the exact location of fire is not required.

**INSTITUTIONAL AUXILIARY SYSTEMS** in which the operation of a station lever by a person, equipped with the proper key, causes a code to be sounded on all audible signals within the building for drill purposes. In the event of an actual fire the operation of the station lever will cause an alarm to be sounded on all audible devices within the building, and at the same time will transmit a signal over the municipal fire alarm circuits indicating the building on fire.

**GROUP-TYPE SYSTEMS** are for use where several buildings are to be protected by one system. On such systems the operation of any station lever causes the code-number of that particular station to be sounded 4 times on all local fire alarm signaling devices in that particular building only and also on all pilot signals in that building or any other building in the group. If specified, a general alarm feature arranged to sound all local signals in all buildings can be furnished. Where required, these systems can also be arranged to auxiliariize the Municipal Fire Alarm Systems, through a selective relay, so that, in addition to the signals indicated above, the system will also provide for simultaneously and automatically summoning the Municipal Fire Department.

**THERMOSTATIC TYPE SYSTEMS** in which stations of the thermostatic-type, which operate automatically in case of fire or excessive heat, are used. Such stations normally provide for continuous signal only on all sounding devices until the fire is extinguished, or cause of excessive heat removed, but, when combined with code-ringing boxes of electric-trip type they will, upon operation, trip the code-ringing box-mechanism, thereby causing the predetermined code of that box to be sounded on audible signal devices on the system. Such thermostatic systems or circuits, can be combined with any of the systems outlined in the foregoing paragraphs.

**GENERAL ALARM NON-CODE SYSTEMS** on which the breaking of glass in the station operates all signals continuously until glass is replaced or circuit switch is opened.

### Open-Circuit Systems

Under the open-circuit systems the following may be furnished:

**PLAIN CODE SYSTEMS** in which the operation of a station lever causes all audible devices to sound a pre-determined code indicating point of origin of the alarm.

**MASTER CODE SYSTEMS** in which one standard code is used, this code indicating "Fire" but where the exact location of fire is not required.

**GENERAL ALARM NON-CODE SYSTEMS** in which the breaking of glass in station operates all audible signals continuously until glass is replaced or circuit switch is opened.

**ANNUNCIATOR ALARM SYSTEMS** in which the breaking of glass in station operates a corresponding drop on an annunciator indicating point of origin of alarm and also operating audible signals.

### Fire Alarm Boxes

Fire alarm boxes for industrial fire alarm systems are manufactured in 9 types, to meet all conditions of fire alarm service as follows:

Plain Type Code-Ringing Closed Circuit.

Pre-Signal Type Code-Ringing Closed Circuit.

Double-Code-Ringing Type Closed-Circuit.

Shunt Non-Interfering Code Systems may be included in the Plain or Pre-Signal Systems mentioned above. These features prevent the jumbling of the code signals in the event of more than one station being operated at or about the same time and for the same fire.

Code-Ringing, Electric Trip, Closed-Circuit, Pre-wound Type.

Code-Ringing Electric Trip, Closed-Circuit, Self-Propelling Type.

Closed-Circuit Type, Non-Code Ringing.

Thermostatic Type, Open or Closed Circuit, Non-Code-Ringing.

Open-Circuit Type Non-Code-Ringing.

Code ringing closed-circuit fire alarm boxes are subdivided into the following groups:

Enclosed Pull-Lever Surface and Semi-Flush.

Break-Glass Pull-Lever Surface and Semi-Flush.

Weatherproof Pull-Lever Surface.

Weatherproof Break-Glass Pull-Lever Surface.

### Sounding Devices

Sounding devices for fire alarm systems are designed with the utmost care to afford the maximum of protection through dependable operation. Dependability is the more important as fire alarm sounding devices may remain idle for long periods of time and yet must be so constructed that, when the need arises, they function instantly and satisfactorily.

Sounding devices are divided into 2 general classes, viz.:

Electrical Sounding Devices.

Mechanical Sounding Devices.

Electrical sounding devices are predominant for use in fire alarm systems and comprise:

Straight Electric Signal Gongs—Single Stroke and Vibrating.

Small Electric Sirens.

Motor-Driven Horns and

Vibrating Horns.

Mechanical sounding devices consist of compressed air horns.

### Fire Alarm Control Cabinets

For regular, pre-signal or dual-operated and double code fire alarm systems.

Fire alarm control cabinets are designed for the control and supervision of Fire Alarm Circuits. They consist of ebony asbestos or slate panels having mounted thereon necessary controller-relays. Trouble-relays, time-limit-cut-outs, meters, terminals, fuses, etc., all being enclosed in heavy pressed steel fireproof cabinets with Yale locked doors. Glass windows are provided in doors to permit ready reading of meters without opening the doors.

### Fire Alarm Apparatus

Fire alarm apparatus is steadily being improved in quality and design from year to year and is guaranteed to be electrically and mechanically perfect. Particular attention, however, is called to the necessity of proper installation and maintenance if every day in the year satisfactory service is to be obtained. Installation suggestions are furnished with each system.

### Engineering Advice

Our engineering department will promptly advise and cordially co-operate with anyone contemplating the installation or use of fire alarm apparatus.

## Edwards Hammerless Break-Glass Non-Code Fire and Emergency Stations

6-125 Volts

Schedule C

First pull of lever breaks glass, allowing plunger to come into alarm position. Lever falls down, displaying arrow danger signal and words, "Replace Glass" on reverse side—immediately indicating which station has been operated and a constant warning to reset it.

Eliminates lost or stolen hammers, marred walls, etc. With hammer type stations, person may not completely break glass. In this station, glass must break completely with first easy pull. Hitting or leaning against lever will not break glass and accidental or mischievous operation is minimized.

Hinged front, unlocked with key, for test or fire drill. Size,  $3\frac{1}{16} \times 4\frac{1}{8}$  inches. Standard finish, red with raised aluminum letters.

Open circuit non-code stations are Underwriters' approved. Laboratories will not grant approval for non-code closed circuit stations.

No. 227, Flush-Open Circuit, Fits Std. Switch Box, Etc., Wt., 3 Lb.....	each	\$13.50
No. 227C, Flush-Closed Circuit, Fits Std. Switch Box, Etc., Wt., 3 Lb.....	each	13.50
No. 228, Surface-Open Circuit, Cast Fitting for $\frac{1}{2}$ -Inch Pipe, Wt., 5 Lb.....	each	16.00
No. 228C, Surface-Closed Circuit, Cast Fitting for $\frac{1}{2}$ -Inch Pipe, Wt., 5 Lb.....	each	16.00

## Perfection Teletypewriter Papers

A sensitized coated paper that copies from pressure without carbon.

It is ideal for duplication; gives more yardage and assures clear, distinct and positive copies.

### $8\frac{7}{16}$ -Inch Teletypewriter

Furnished for single copies, 2, 3, or 4 copies, carbon interleaved and 2, 3 or 4 copies blue carbonless.

Shipped in rolls 5 inches in diameter, weighing approximately 4 pounds, and packed 12 rolls to carton.

### $1\frac{1}{16}$ -Inch Oiled Perforator Tape

Shipped in rolls of 1040 feet, 8 inches in diameter, weighing approximately  $1\frac{1}{8}$  pounds, and packed 50 rolls to carton.

### $\frac{3}{8}$ -Inch Teletype Tape

Gummed or Ungummed

Shipped in rolls of 1050 feet, 8 inches in diameter and packed 50 rolls to carton.

Gummed rolls weigh 0.65 pound, and ungummed rolls weigh approximately 0.54 pound.

### Fire Alarm Tape

Width,  $\frac{1}{2}$  inch,  $4\frac{1}{2}$  to 5 inches diameter, weighs 4 to 5 ounces per roll, 36 rolls to package, 288 rolls to carton.

Width, 1 inch,  $4\frac{1}{2}$  to 5 inches diameter, weighs 8 to 10 ounces per roll, 18 rolls to package, 144 rolls to carton.

### Police Register Tape

Width,  $1\frac{1}{16}$  inches; 6 inches diameter, weighs  $1\frac{1}{2}$  pounds per roll.

Wrapped 10 or 12 rolls to package, 40 or 48 rolls to carton.

We are also in a position to furnish rolls for any type automatic machines.

## Edwards Fire Alarm Stations

Schedule C

Nos. 1275-2, 1275-2-DO, 1275-2-M

Nos. 1276, 1276-DO, 1276-M

## Closed Circuit Code Ringing Stations

For Systems SS, 110-120 V.D.C.; SSA, 110-120 V. A.C.; EMB, Battery  
Open Door Pull Lever Type

Open door and pull down lever to sound alarm. Lever automatically disengages from mechanism, and subsequent pulling has no effect on proper operation of system. May be run for test without operating system by use of a test key. Finish is red enamel with raised aluminum letters.

**No. 1275.**—Surface type for surface conduit. Overall dimensions,  $7\frac{5}{8}$  inches high,  $5\frac{5}{8}$  inches wide, 5 inches deep. Approximate weight, 10 pounds.

No. 1275.....each \$55.00

**No. 1276.**—Semi-flush for concealed conduit. Overall dimensions,  $8\frac{1}{2}$  inches high,  $7\frac{1}{16}$  inches wide; including wall box,  $7\frac{3}{4}$  inches high,  $5\frac{3}{4}$  inches wide,  $3\frac{3}{8}$  inches deep. Approximate weight, 12 pounds.

No. 1276.....each \$55.00

Approximate weight wall box only,  $3\frac{3}{16}$  pounds.

### Break Glass Pull Lever Type

Breaking glass unlatches door, which springs open and remains so. Pulling down lever causes sounding of alarm. Door may be opened for test without breaking the glass by use of special key, otherwise station is same as Nos. 1275 and 1276.

**No. 1275-2.**—Break-glass surface type for surface conduit. Overall dimensions same as No. 1275. Approximate weight, 10 pounds.

No. 1275-2.....each \$65.00

**No. 1276-2.**—Break-glass semi-flush type for concealed conduit. Overall dimensions same as No. 1276. Approximate weight, 12 pounds.

No. 1276-2.....each \$65.00

Approximate weight wall box only,  $3\frac{3}{16}$  pounds.

## Closed Circuit Pre-Signal Code Ringing Stations

For Systems PSS, 110-120 V. D.C.; PSSA, 110-120 V. A.C.;

PEMB, Battery

Designed and constructed the same as stations described above, except that the pre-signal alarm is sounded four times at pre-determined places only. If upon investigation it is found desirable to sound a general alarm to clear the building, this may be done by inserting a special key in any box and pulling lever.

No. 1275-DO, Same as No. 1275.....each \$65.00

No. 1276-DO, Same as No. 1276.....each 65.00

No. 1275-2-DO, Same as No. 1275-2.....each 72.00

No. 1276-2-DO, Same as No. 1276-2.....each 72.00

## Special Features for Code Stations

220-240 volts operation, when specified, no extra charge. Two sets of contacts, 1 code wheel, add, \$2.75. Two sets of contacts, 2 code wheels, add \$8.00. Shunt type arrangement, add, \$9.50.

## Federal Pull Lever Type Alarm Boxes

Automatically sounds the siren up and down the scale a predetermined number of times and then cuts out at the conclusion of the alarm.

Pulling down the lever winds a clockwork mechanism which rotates a cam (or code wheel). This cam opens and closes the circuit a given number of times on each revolution or round.

The box is set at the factory, usually to give two or three blasts per round.

It may be quickly adjusted in the field to repeat this signal two, three, or four times, as desired. Special signals can be blown by use of the telegraph key in the box.

Where fire alarm boxes are to be mounted outside, exposed to the weather, the weatherproof type is recommended.

## Controls for A.C. Only

Remote Control for No. 2 Siren.....	each	\$25.00
Remote Control for No. 3 Siren.....	each	35.00
Remote Control for Nos. 5 or 7 Siren.....	each	50.00
Push Button Switches.....	each	5.00
Push Button in Break Glass Weatherproof Box.....	each	15.00
Fire Alarm Box (As Illustrated).....	each	45.00
Fire Alarm Box, Weatherproof.....	each	55.00
Standard General Alarm Control.....	each	40.00
Predetermined (Automatic Stop) General Alarm.....	ea.	55.00

Specify voltage and type of current when ordering.

## Federal Industrial Sirens

Type A

For many applications, such as start-and-stop signal for workers, fire alarm, emergency warning, buglar alarms, etc. Used in factories, warehouses, yards; on ships, cranes, drawbridges, and other harbor services; on large construction projects, plantations, and ranches; at public and private institutions; and in mines and quarries.

**Type A Weatherproof Siren.** Equipped with a specially constructed siren motor to provide  $\frac{1}{3}$  hp. performance with minimum current consumption. Has swivel bracket for mounting at any desired angle.

Red lacquer finish.

**Type L Weatherproof Siren.** Similar in general detail to Type A but is larger, more powerful, and with lower tone. Especially designed for unusually heavy duty applications particularly on higher voltages. Swivel bracket.

Red lacquer finish.

**Type A Weatherproof Code Siren.** A modification of standard Type A siren, for code signals. A time saver for calling key employees. Short up-scale blasts permit distinctive penetrating signals. Coding controlled by control of air supply and not by reversal or destructive braking. Has swivel bracket. Red lacquer finish.

Type.....	A	L	A-Code
Each.....	\$46.00	60.00	75.00
Voltage.....	*6 to 110	*110, 220, 250	*110
Current and Cycle.....	Universal	Universal	†
Length.....inches	11	13	12 $\frac{3}{4}$
Diameter.....inches	10 $\frac{1}{2}$	11 $\frac{1}{2}$	7 $\frac{1}{2}$
Height.....inches	12 $\frac{3}{4}$	13 $\frac{1}{2}$	11
Weight.....pounds	13	16 $\frac{1}{2}$	14

\*Specify definite voltage; Universal motors operate on d.c. or any cycle a.c. from 25 to 60.

†Specify definite voltage, cycle, and type of current.

## Federal Vertical Electric Sirens

Vertical general alarm and code sirens provide effective signals for industries and municipalities. The vertical design distributes the sound equally in all directions over a radius of from  $\frac{3}{4}$  to 3 miles. Grease sealed ball bearings and heavy duty construction assure maximum durability and performance. The heavy galvanized sheet metal housing makes the siren completely weatherproof but does not muffle tone.

Large sirens should be operated through a remote control to which any number of push buttons, or pull lever boxes may be connected.

Hp.	Each	Remote Control	Volts	Motor Current	Cycles Phase	Ship. Wt. Lb.
2	\$225.00	\$25.00	110-220	A.C., D.C.	Any 1	90

3	450.00	35.00	220	A.C.	60 1	450
5	400.00	50.00	220-440	A.C.	60 3	485
5	500.00	50.00	220	A.C.	60 1	505
7 $\frac{1}{2}$	425.00	50.00	220-440	A.C.	60 3	515
7 $\frac{1}{2}$	525.00	50.00	220	A.C.	60 1	525

Specify definite voltage on order.

## Federal Vehicle Sirens

A complete line of powerful sirens, with or without flashing lights for fire apparatus, ambulances, police cars, and other emergency vehicles, ranging in price from \$19 to \$130.

Write for complete bulletins.

## Federal Standard Vibratory Horns

Ideal for use in mills, mines, yards, warehouses, public buildings, and in any location where a distinct code signal or long warning blast is desired. Whether for interior or exterior use, this horn is weatherproof and watertight. Constructed throughout of non-corrodible materials.

The housing is tapped at top and bottom for  $\frac{1}{2}$ -inch conduit.

Die cast from special non-corrodible alloy.

Projectors on Models, 30, 40, 50 and 51 can be rotated.

Gray lacquer finish. Packed 1 to a carton.

## Surface Type

No.	Each	*Voltage	Current	†Cycles	‡Length Inches	Finish	Ship. Wt. Lb.
30A	\$14.00	6 to 250	A.C.	60	4 $\frac{3}{8}$	Gray	4 $\frac{1}{4}$

## Flush Type

No.	Each	*Voltage	Current	†Cycles	‡Watts	Description	Ship. Wt. Lb.
F30B	\$22.75	6 to 250	A.C.	60	18	Wall Box	6 $\frac{1}{2}$
F30H	17.25	6 to 250	A.C.	60	18	Housing	6 $\frac{1}{2}$
F40B	25.50	6 to 250	D.C.	..	18	Wall Box	6 $\frac{1}{2}$
F40H	20.00	6 to 250	D.C.	..	18	Housing	6 $\frac{1}{2}$

Available for concealed conduit mounting, if specified, at no extra cost.

\*Definite voltage must be specified on order.

†Also available for 25 cycle at no extra charge.

‡Dimensions given are for overall length; mounting diameter between bolt hole centers is 6 inches.

§Average wattage for estimating line loads and power requirements.

# Federal High Power Vibratory Horns

Similar in all details to the standard model, but provides almost double the sound volume. Where maximum volume is required, it has an advantage over motor driven units because it can be coded much more rapidly. This horn which is also weatherproof, watertight, and non-corrodible fills a definite need in applications where an ordinary horn is not satisfactory.

Die cast from special non-corrodible alloy. Projector on Models 32, 42, 33 and 43 can be rotated. Lacquer finish. Packed 1 to a carton.

## Surface Type

No.	Each	Voltage	Current	Cycles	Length Inches	Ship. Wt. Lb.

Available for concealed conduit mounting at no additional charge. Also available in any specified voltage from 6 to 250 with no increase in price for 25 cycle.

Dimensions given are overall lengths; mounting diameter between bolt hole centers is 6 inches.

\*Average wattage for estimating line loads and power requirements.

# Model AX Federal Explosion-Proof Sirens

## For Service in Hazardous Locations

Approved by Underwriters' Laboratories, Inc.

Used as time or start and dismissal signaling. Also used as positive alarm in mines, on tankers, at refineries, and in grain elevators, arsenals, and chemical plants.

Equipped with a high speed universal motor suitable for either a.c. or d.c. current.

Available for 110, 220, or 250 volts as specified.

Mounting diameter between bolt hole centers is six inches.

Shipping weight, 19<sup>1</sup>/<sub>4</sub> pounds.

Each..... \$140.00

# No. 318 Edwards Lightweight Horns

For general use in schools, factories, warehouses, and all other interior locations where a loud signal may be used.

Tests show a range of 102 to 105 decibels on d.c. and 98 to 100 decibels on a.c.

Cover and mounting rings are made of aluminum.

Case is made of sheet steel.

Diaphragm is made of a special formula steel.

Has grey finish.

For low voltage only. Can be furnished in any voltage from 6 to 48 volts a.c. or d.c. Specify when ordering.

No. 318, Weight, 8 Ounces..... each \$6.75

# Federal Resonating Horns

A powerful electric horn with pleasant but penetrating trumpet tone. Overcomes unusual noise levels.

Horn is of die cast non-corrodible alloy with a projector of spun metal, complete with swivel bracket. Weatherproof and watertight. Specify definite voltage and cycle desired.

Packed one to a carton. Shipping weight, 11 pounds.

# No. 5420 Edwards Screech Horns

120 Volts, 60 Cycles

Used in locations where ordinary horn will not pierce loud machinery noises.

Fitted with bracket for wall or ceiling mounting.

Case is drilled for 1/2-inch conduit.

When used on a signal circuit of 120-volt units, watt rating must be figured at 144 watts. Where all other signal units are on 24-volt a.c. signal circuit, No. 5304 relay, drawing 2 watts, must be inserted into the signal circuit. From the relay, two wires are taken to the 120-volt a.c. lighting circuit and two wires to the screech horn.

No. 5420..... each \$50.00

## Edwards Industrial Horns

Schedule S

No. 311

No. 312

A backplate mounts directly on wall for non-conduit wiring, or on 4-inch square box, standard switch box, any outlet box with single gang cover, any single gang conduit or wiremold type fitting. An envelope containing all the necessary mounting screws is supplied with each horn. For open wiring, washers are supplied to raise back plate from wall enough for wires to pass underneath it. Wires are brought through entrance holes in plate and connections made to binding posts in front of plate where there is plenty of room to work. The horn is then hung on two strong lugs and pressed home, where it snaps solidly into place and is held securely. To prevent tampering, a few turns on a set screw at bottom of each device locks it in place.

### Indoor Types

**No. 311.**—Powerful signal for all indoor uses. Grille front affords pleasing appearance which recommends it for schools and better buildings. Easily installed flush. Size of horn, 5½ inches diameter, 3½ inches deep.

**No. 310.**—Equipped with megaphone projector to allow greater volume than grille type. Adaptable for indoor use where machinery noises must be overcome. Size, 6 inches high, 6 inches deep, 10¾ inches long.

**No. 314.**—Indoor 2 direction type. Size, 6 inches high, 7½ inches deep, 18 inches long.

### No. 312 Weatherproof—Outdoor Types

Powerful signal, for average outdoor uses. Single megaphone. Thoroughly weatherproofed. Equipped with cast iron back box. Size, 5½ inches high, 5½ inches deep, 10¾ inches long.

No.	24 V., A.C. 60 Cy. Each	115 V., A.C. 60 Cy. Each	240 V., A.C. or D.C. Each	Approx. Weight Pounds
310	\$15.60	\$15.60	\$18.75	8
311	14.00	14.00	17.15	7
312	18.75	18.75	21.75	8

Standard frequency 60 cycles; 25 cycles supplied at no extra charge if specified.

Series Operation: Divide full available voltage by number of horns per circuit to find voltage per horn for pricing. Give full details when ordering. D.C. horns cannot be operated in series.

## No. 309 Edwards Flush Horns

24, 115, 240 Volts, A.C., 60 Cycles

Schedule S

For flush installations particularly in new buildings such as schools and other public institutions.

Tone adjustment may be made after horn is installed in wall.

Standard face is steel, finished black.

Size of faceplate, 6½x6½ inches. Wall cut size, 5⅞x5⅞x2¼ inches deep.

No. 309, 24 or 115 Volts, A.C., Specify ..... each \$22.75  
No. 309, 240 Volts, A.C. .... each 25.50

Price includes steel wall box with combination ½ and ¾-inch knockouts on 4 sides. Sprayed bronze or prime white no extra charge, if specified. Bronze plate add \$3.25.

The 25 to 40 cycles can be supplied at same price when specified. For d.c. specify No. 309D, add \$2.75 and specify voltage.

## Benjamin Motor Driven Signals

Listed by Underwriters' Laboratories

No. 8175

A weatherproof signal of unusual tone and penetration. Used indoors or out where service requirements are exacting. For use in steel mills, railroad shops, foundries, and all locations where noise is excessive.

Pitch of signal is correct for cutting through conflicting noise. Suited for coding as

there is no lag or coasting of motor to blur the coded signal.

Signal has heavy cast body, weatherproof rubber gaskets, drop-forged, heat-treated alloy steel ratchet and diaphragm anvil, phosphor bronze armature bearings, and automatic wick-feed lubrication. Motor is series wound for starting power, and has correct r.p.m. to produce penetrating tone. A set screw at rear of housing controls volume and pitch.

Standard voltage: 110 and 220 volts, 60 cycles a.c. or 110 and 250 volts, d.c. Power consumption, 55 watts.

The double projector type motor-driven signal is used where sound is to be projected in opposing directions from a central location.

Conduit connection, ½ inch.

Finished in battleship gray enamel. Red enamel furnished at an advance of \$1.25.

Weight, 15¼ pounds.

### With 8½-Inch Single Bell Type Projector

*A. C.			†D. C.		
No.	Each	Volts	No.	Each	Volts

8180-220V	53.00	220	8181-250V	56.00	250

\*Also operates on 50, 40 or 30 cycles.

†Also operates on 25 cycles, a.c.

## Benjamin Weatherproof Fire Alarm Howlers

Listed by Underwriters' Laboratories

For use on fire alarm systems operating under stringent regulations.

The threaded ring separable construction, and plug-in type of wiring connection assures quick, simple installation.

D.c. howler has interrupter with coin silver contacts protected by condensers against arcing. A.c. howler has no contact; vibrations follow cycles of a.c.

The horn assembly consists of a 7½-inch seamless bell type steel projector permanently attached to a pressed steel cover on which is mounted the horn mechanism.

Baked red enamel finish.

Shipping weight, 6¾ pounds.

D. C.			*A. C., 60 Cycles

\*Standard, 60 cycles, 25 cycles furnished when specified.

## Benjamin Heavy-Duty Weatherproof Howlers

Listed by Underwriters' Laboratories

Ideal for effective calling or warning in industrial and commercial locations.

The threaded ring separable construction and plug-in type of wiring connection assures quick, simple installation. Operates on either series or multiple circuits.

Housings are regularly tapped on one side only for 1/2-inch conduit entrance but can be tapped for 3/4-inch conduit, when specified. Housings can also be tapped straight through for either 1/2 or 3/4-inch conduit at an advance of 5 cents in list price.

Baked battleship gray enamel finish; red enamel finish, when specified.

\*Or 25 cy. †Transformer needed with low voltage signals.

## Benjamin Industrial Buzzers

Listed by Underwriters' Laboratories

Recommended for use on calling and warning systems where the volume of competitive noise is not excessive.

The buzzer mechanism is attached directly to the removable metal cover of the case and it is the armature striking this metal cover which produces the sound.

### Heavy Duty Mine Type Buzzer—Tapped 1/2 Inch

For use in tunnels, subways and etc.

Separable construction, with heavy cast metal housing and a steel cover, held in place by a metal threaded union ring.

Housings regularly tapped 1/2-inch, one side only.

Baked battleship gray enamel finish.

*A.C., 60 Cycles			D.C.		
No.	Each	Volts	No.	Each	Volts

### Mine Type Buzzer—8-Inch Leads

Weatherproof, with separable construction. Has pressed steel casings with gasketed steel cover, held in place by a metal clamping band.

Sealed assembly, with 8-inch insulated wire leads which feed through a water tight bushing.

Casings have two sets of gasketed attaching holes spaced on 2 3/4 and 3 1/2-inch centers.

Baked battleship gray enamel finish with sprayed aluminum band.

\*Supplied 25-cycles, when specified.

†Signal transformers to be used with this type.

## Benjamin Signaling Single Stroke Bells and Chimes

For Series or Multiple Operation

Listed by Underwriters' Laboratories, Inc.

3-Inch Bell

8-Inch Bell

Chime

Simple in design and positive in operation.

Mechanism is of the solenoid type with only one moving part, the plunger, which responds instantly when the coil is energized. This type of construction practically eliminates maintenance costs and assures operation with a minimum current consumption.

The tone volume of both bells and chimes is adjustable. Soft, medium, or loud tones may be obtained by turning the set screw at the bottom, which regulates the plunger stroke.

Installation is simplified by a special mounting plate which provides a means of direct attachment to Gem type outlet boxes or to any switch or outlet box cover having mounting holes space on  $3\frac{1}{4}$ -inch centers. In installation, the mounting plate is first attached to the outlet box or cover by two screws. The wires are then brought through the large center hole in the plate, and looped around the binding screws, which are easily accessible with ample space for wiring. After wiring, the device is securely attached by two screws threading into the mounting plate.

The plunger is of magnetic iron with a bakelite tube.

The magnet coil is layer wound, impregnated.

Chimes are identical in construction to the bells except that a metal chime bar with a metal resonating chamber is provided in place of a gong.

Bell housings are cast iron.

Bells are highly polished; housings are battle-ship gray.

Housings for chimes are cast iron, finished in crackle lacquer.

Chime bar and resonating chamber are chromium plated.

Standard cycles, 60. When specified, 25-cycle bells and chimes are available in all voltages at no extra cost.

Type	Current	*24 Volts		*110 Volts		*220 Volts

Chime	A.C.	.....	.....	†8120	18.45	8120	20.50
Chime	D.C.	.....	.....	8121	18.45	8121	20.50

\*Bells up to 48 volts take 24-volt prices; from 48 to 110 volts take 110-volt prices; and bells and chimes over 110 volts take 220-volt prices.

†Chimes up to 110 volts take 110-volt prices.

For series operation, prices are determined by dividing full line voltage by number of signals in circuit to find voltage of each signal.

## Edwards Vibrating Adaptabels

For All A.C. and D.C. Voltages

Schedule S

This is a compact bell of the Underdome, Turtle or Monitor type.

As the electrical connections are made to the mounting plate only, the whole electrical installation can be made, tested and completed before painting and finishing.

The maintenance problem in hard service work, like traffic signals, railroads, etc. is simplified with a few spare Adaptabels. The Adaptabel is easily detached and a new one attached—instead of repairing on the job or installing a new bell.

The movement is completely enclosed in a cast aluminum housing. Protected against dirt, bugs, etc. When weather-proof is specified, it is protected with gaskets.

The a.c. vibrating mechanism is the polarized, no contact type. The d.c. vibrating mechanism is also of the straight line plunger type. Gongs are hot pressed steel, Parkerized to prevent rust.

All 6- and 10-inch Adaptabels mount directly on wall, 4-inch square box, standard switch box or any outlet box with single gang conduit or Wiremold type fitting.

All 4-inch Adaptabels have separable plate for mounting same as above and will also fit  $3\frac{1}{4}$ -inch octagon boxes.

In ordering, specify voltage desired.

## Edwards Single Stroke Bells

For Approved Coded Fire Alarm Systems

No. 23 for D.C., No. 24 for A.C.

Schedule C

Solenoid construction approved by State, Insurance and Underwriters' Boards for closed circuit fire alarm systems. Mounts on wall or 4-inch square box, or standard switch box, or any outlet box with single gang switch cover, or on any single gang conduit or wire-mold type fitting. Prices for series operation on 110 volts from control panel.

## No. 156 Edwards Monitor Bells

## Schedule S

An entirely self-contained bell that presents a neat appearance.

The hammer rod moves on a straight line and strikes the inside of the gong. This allows the bell to be made bug and dust proof.

The springs are phosphor bronze, the contacts pure

hard-drawn silver. Has a 3-inch gong.

Cadmium finished gong with black base.

Standard package, 1; approximate weight, 2 pounds.

Standard 8-10 V. A.C., 6-8 V. D.C.....	each	\$2.25
Other Voltage to 48 Volts (Specify When Ordering).....	each	3.85
For 24 V., D.C. or A.C.....	each	3.00

## Edwards Doorbells and Buzzers

Standard 8-10 Volts 60 Cycle A.C., 6-8 Volts D.C.

## Schedule S

Bell movement has straight hammer rod and solid hammer ball, giving more power and smoother action on battery or transformer.

No. 730

Arranged for surface or concealed wiring.

The Dixie doorbell and the Buzabel combined bell and buzzer are enclosed. Cover snaps on with a slight pressure, with no screws necessary. These models are only 1 inch deep to allow for mounting in out-of-the-way places where other models will not fit. The Nubel has enclosed binding posts and the snap-on type cover and exposed gong.

Large magnet, correctly designed phosphor-bronze springs, silver contacts, and fine workmanship.

Buzzer case is  $1\frac{3}{4} \times 2\frac{3}{4}$  inches, fully insulated.

## No. 503 Edwards Bus Signaling Equipment

6-12 Volts D.C.

## Schedule T

No. 503

Precision made, adjustable sturdy and dependable. Rust-proof throughout, insulated. Most dependable for hard service transportation work.

No. 503.....each \$8.20

## No. 504 Edwards Bus Door Step Light Switches

## Schedule C

No. 504 Switch and Bumper Plate

A ruggedly constructed door switch for operating step lights.

Built to stand up under the constant operation found in bus service.

Face plate is of heavy gage brass with polished nickel finish. Head of plunger is stainless steel.

Contacts are enclosed in bakelite base.

Operates on battery voltage.

Bumper plate and mounting screws supplied with each switch.

Approximate weight, 1 pound.

No. 504.....each \$3.15

## Edwards Flushcall Signaling Devices

Flushcall Device

Buzacall

Togelpush

Signaling and calling devices for residence, apartment, or any place old-fashioned bells, buzzers, and transformers were heretofore used. Each device fits standard gang boxes and takes standard switch or receptacle plates. Can be ganged together with 110-volt receptacles, etc., in standard box and finished with standard plate.

Each device is designed and built for a.c. operation only on 8 to 12 volts—with absolutely no adjustment before, during, or even after installation. The uncertainty as to proper resistance, voltage, etc., for various uses has been eliminated.

CONSTRUCTION DETAILS: Large, accessible binding posts. frame and louvre front plate combine to completely surround and protect gong and mechanism from wires in box. Inclined construction of frame and shallow design leaves ample room for lock nuts and wires. Elliptical hole permits a plumb adjustment. Mechanism completely insulated from frame. Rust-proof metals or finish throughout.

## Ringcall

No.	Each	Schedule	A.C. Volts	Cycles	Std. Pkg.	Approx. Wt. Lb.

## Edwards Door Chimes

Schedule F

No. 1605, Captain

No. 1606, Major

No. 1608, Empress Eugenie

## No. 1620, Colonial

Light ivory finish on metal with bright brass eagle on blue ground.

Sonoscope tested 1-inch diameter brass tubes.

Sounds two-note signal for front entrance and a single note for rear entrance.

Standard package, 6.

Overall dimensions: length, 43 $\frac{5}{8}$  inches; width, 8 $\frac{1}{4}$  inches; depth, 2 $\frac{1}{4}$  inches.

No. 1620.....each \$7.95

## No. 1605, Captain

A neat attractive metal case, finished in light ivory with contrasting chrome decoration.

The tone bars are Sonoscope tested for perfection of tone.

Sounds the two-note melody for front entrance and the single note for rear entrance.

Standard package, 10.

Overall dimensions: height, 6 $\frac{3}{4}$  inches; width, 3 inches; depth 2 $\frac{1}{4}$  inches.

No. 1605.....each \$3.50

## No. 1606, Major

Polished chrome shield flanked on either side by white resonators.

The Sonoscope tested tone bars have the improved tone that comes with individual resonators.

Standard package, 10.

Overall dimensions: height, 7 $\frac{3}{4}$  inches; width, 6 inches; depth, 2 $\frac{1}{4}$  inches.

No. 1606.....each \$4.95

## No. 1608, Empress Eugenie

Antique white bracket shelf enclosing individual resonators and Sonoscope tested bars.

The Sylvite case reproduces the depth and tone of old wood.

Sounds the two-note melody for front entrance and the single note for the rear entrance.

Standard package, 6.

Overall dimensions: height, 6 $\frac{7}{8}$  inches; width, 8 $\frac{5}{8}$  inches; depth, 5 inches.

No. 1608.....each \$7.95

## No. 1600 Edwards Non-Electric Door Knocker Chimes

Schedule F

Designed by Lurelle Guild.

Outside door knocker is made of bright, weather-resistant solid brass with an ivory knob. Complement to any style of architecture.

Inside unit has beveled, hand-polished mirror and is framed in light ivory. Mirror conceals the compact chime mechanism, which is accurately tested for perfect tone-pitch and tone quality on the Sonoscope.

Standard package, 6.

Shipping weight, 17 pounds per standard package.

No. 1600.....each \$6.95

No. 1620, Colonial

Outside

Inside

## Kirkland Indicating Lamps

All units on this page are for single-hole panel mounting. All lens caps are removed from the front of the panel, permitting lamp bulb servicing. For 220-440-volt service see resistor recommendations.

### No. 590 Indicating Lamps

Underwriters' approved unit for 120-volt service. Uses T4 tungsten or T4½ neon candelabra base bulb. Smooth plastic lens, in small lens cap 1½ inches in diameter. Mounts in 7⁄8-inch diameter hole. Overall depth behind front of panel, 2½ inches.

No. 590.....each \$ .90

### No. 600 Indicating Lamps

Underwriters' approved unit for 120-volt service. Uses S6, 3 or 6-watt tungsten bulb, with candelabra screw base. Smooth cupped lens, interior sand-blasted. Mounts in 1¾-inch diameter hole. Overall depth behind front of panel, 2¼ inches. Special flat lens for letters or numbers; three letters or numbers, 15 cents.

No. 600.....each \$1.65

### No. 659 D/E Deluxe Indicating Lamps

A unit of extra heavy duty construction for use with 120-volt S6 tungsten or T4½ neon candelabra screw base bulbs. Extremely shallow depth, only 1¼ inches behind the front of the panel. Mounts in 1¾-inch diameter hole. Heavy glass deeply cupped lens. Chrome finish on hexagon holding lip, (1⁄8-inch wide), with black finish on metal lens cap.

No. 659 D/E.....each \$2.20

### No. T2 Indicating Lamps

No. T2 lampholder molded of bakelite. Mounts in 3⁄4-inch diameter hole. Overall depth behind front of panel, 2¾ to 2¼ inches. Uses T2 slide base low current bulb, .038 maximum amperes on 24 volts. Resistors for 120-220-440 volts. Slip-fit lens caps used; No. T2PC plastic cap, No. T2MC glass lens in metal cap, or No. T2WE cap (a metal cap housing No. 2 WE caps). An ideal unit where panel space is limited.

No. T2 Lamp-holder.....each \$ .50  
No. T2PL Cap..... .20  
No. T2MC Cap..... .50  
No. T2WE caps quoted on request.

### No. 555 Indicating Lamps

No. 555 LV for low voltage G6 bulb and No. 555 HV for S6-120-volt bulb. Double-contact bayonet type. Mounts in 7⁄8-inch diameter hole. Overall depth behind front of panel, No. 555 LV, 1¾ inches, No. 555 HV, 2½ inches.

No. 555.....each \$1.25

### No. 170 SP Indicating Lamps

Underwriters' approved unit for 120-volt service. Uses the S6 candelabra screw base bulb. Flat glass 2-inch diameter lens for letters and numbers. Any color effect. Mounts in 1¾-inch diameter hole. Overall depth behind front of panel, 2½ inches. Chrome lens cap.

No. 170 SP, less markings.....each \$2.00

### No. G10 and G11 Indicating Recessed Lamp Receptacles

Units that so house the bulb that the effect of a lens is created. Standard screw socket. No. G10 uses G10 neon bulb, No. G11 uses 7-watt tungsten G11 bulb, both on 120 volts. Ideal when lights are on constantly, due to good ventilation. Mounts in 1¾-inch diameter hole. Overall depth behind front of panel, 1¾ inches. Highly polished chrome finish.

No. G10 and G11.....each \$1.80

### No. T2SLC Indicating Lamps

A super-fine unit for use with the low current T2 slide base bulb, .038 maximum amperes on 24 volts. A molded bakelite lamp holder in a lathe-machined metal housing. Screw type lens cap of metal with plastic lens. Mounts in 1½-inch diameter hole. Overall depth behind front of panel, 2½ to 2 inches. Resistors for 120-220-440-volt service. No. T2SLC, Black Finish.....each \$1.65

### No. 590 D/E Indicating Lamps

Underwriters' approved unit for 120-volt service. Uses S6 tungsten or T4½ neon candelabra base bulb. Deeply cupped glass lens. Interior sand-blasted. Mounts in 7⁄8-inch diameter hole. Overall depth behind front of panel, 2½ inches. Lamp protrudes into lens providing wide range of visibility.

No. 590 D/E.....each \$1.25

### No. 180 SP Indicating Lamps

Underwriters' approved unit for 120-volt service. Uses S6 tungsten candelabra screw base bulb. Has 2-inch diameter beehive lens, deeply cupped. Wide visibility range. Ideal for panels, with heavy apparatus. Overall depth behind front of panel, 1¼ inches. Mounts in 1¾-inch diameter hole. Chrome plated metal lens cap.

No. 180 SP.....each \$2.00

### Series S/C Indicating Lamps

For use with single-contact miniature bayonet base bulbs. Type T3¾ S/C low voltage bulbs and NE51 neon bulbs.

No. S/C 59 P/L. Overall diameter, 1½ inches. Mounts in 7⁄8-inch diameter hole. Overall depth behind front of panel, 1¾ inches.

No. S/C 59 P/L.....each \$ .80

No. S/C 59 G/L. Overall diameter, 1½ inches. Mounts in 7⁄8-inch diameter hole. Overall depth behind front of panel, 1 inch.

No. S/C 59 G/L.....each \$1.00

No. S/C 59 D/E. Overall diameter, 1½ inches. Mounts in 7⁄8-inch diameter hole. Overall depth behind front of panel, 1 inch.

No. S/C 59 D/E.....each \$1.25

No. S/C 65 D/E. Overall diameter, 1¾ inches (tips of hexagon nuts). Mounts in 1¾-inch diameter hole. Overall depth behind front of panel, 7⁄8 inch. No. S/C 65 D/E.....each \$2.20

## Kirkland Indicating Lamps

## No. 170SW Low Wattage Switchplate Units

Has 2-inch diameter flat lens for markings. The plate fits a standard outlet box. Uses the S-6 120-volt, 3 or 6-watt bulb.

Overall depth behind front of plate,  $2\frac{1}{4}$  inches.

No. 170SW, Less Markings.....each \$2.20

## No. 180SW Low Wattage Switchplate Units

An ideal over-door light, closet light, and elevator signal. Has 2-inch beehive lens. Furnished with plate for single gang box. Uses the S6 120-volt, 3 or 6-watt bulb.

Overall depth behind front of panel,  $1\frac{1}{4}$  inches.

No. 180SW.....each \$2.20

## Exit Lights—Neon Type

These units use neon bulbs in such a manner that the lamp effects the appearance of a lens. Reduces lamp theft and breakage to a minimum. Neon lamps have 3000 hours or more lamp life.

**No. G10-SW.** A switchplate unit using the G10 neon bulb. Overall depth,  $1\frac{3}{4}$  inches.

**No. S14-SW.** A switchplate unit using the S14 neon bulb. Overall depth,  $2\frac{1}{2}$  inches.

## Special Lamp Bulbs for Signaling Service

As long life is the prime requisite of an indicating lamp bulb, care must be taken in the choice of the bulb. Ordinary lamp bulbs are made to produce illumination, whereas brilliant light is not required in use with Kirkland Bulls-I-Units. Kirkland signal lamp bulbs are designed especially for indicating light service.

It is recommended that a bulb be of a higher rated voltage than that it is to be operated on; for example, it is wise to use a 150-volt lamp for 120-volt service, or a 32-volt lamp for 24-volt service, etc. The actual results of this practice will be a satisfactory visibility with a greatly increased lamp life.

No.	Type	Rated Voltage	Type of Lamp Base	Each	No.	Type	Rated Voltage	Type of Lamp Base	Each
SA	S6	12	Candelabra	\$.55	TA	T4	12	Candelabra	\$.60

					TN	T2	24	Friction	.50

Other Low Voltage T2 Bulbs.....each \$.60

Bayonet base, double or single contact lamps (U. S. Automobile standard base) available in S6 and T4, (T4 $\frac{1}{2}$ ) types at same prices as above.

## Signal Lamp Resistors

A resistor is used in series with a lamp, for the purpose of operating 120-150-volt lamp on 220-440 volts; 32-volt lamp on 120 volts, etc. These resistors are of the highest quality and made with this particular service in view.

Type No.	Description	Each
220	120-150-Volt Lamps on 220-Volt Service (S6-T4-C7 Type Lamps).....	\$.60
440	120-150-Volt Lamps on 440-Volt Service (S6-T4-C7 Type Lamps).....	.80

TDR	For Use with T2 24-Volt Lamp on 120-Volt Service, with Assembly.....	.50
TER	For Use with T2 24-Volt Lamp on 220-Volt Service, with Assembly.....	.50
TFR	For Use with T2 24-Volt Lamp on 440-Volt Service with Assembly (2).....	1.50
DB	Dim-Brite Split Resistor, for 120-220 Volts with Assembly (T2 Type).....	.80

## Type ML Multiple Lamp Holder Units

With Illuminated Message Plates

This unit is molded of bakelite, and is provided with slots to hold removable light barriers when two, three, or four S6 120-volt bulbs are used. The message plates are of laminated plastic, with a black opaque front, the inner core is of a translucent white material. When the bulb behind the plate is lighted, the message is brilliantly indicated. The message can be produced in any color. Size of light chamber,  $1\frac{1}{2} \times 3$  inches. Overall size of unit,  $3\frac{3}{4} \times 1\frac{1}{2}$  inches. Overall depth behind front of panel to wire terminal,  $2\frac{3}{4}$  inches.

Provided with a V-tip and an inverted V-slot to permit easy alignment, when used one over the other for lamp annunciators and for large groups of messages, such as

used on automatic control devices, etc.

If it is necessary to have extreme side visibility, small bulls-eyes can be placed as required on the plates.

Requires only a small space for installation. For instance, a 40-lamp annunciator, using ten ML4 units would measure only 17x5 inches.

Special units can be furnished with plates for mounting on single and double-gang standard boxes.

## Quonset Fittings for Use with Indicating Lights and Toggle Switches

Quonset Q1—Single Unit  
Quonset Q2—Double Unit

Modern in appearance and ideal for use on machine shop bench legs, desks, etc. Also affords protection against breakage when used on posts for indicating light service, etc.

A die casting base with a brass slip-over cover, permits easy mounting and wiring. The Q1 and Q2 units can be wired through the bottom of the base or on order through the base end. They can be mounted on single and double gang plates.

The Q1 unit can be furnished with Nos. 590 and 590 D/E units for 120-volt service. No. S/C 59 P/L for low voltage service can be used on each end for elevator floor signals. Stock toggle switches can be used on one end or on both ends.

**Edwards Return Call Annunciators****Electromanual Reset**

No. 412 Flush Type with Metal Face Plate and Wall Box  
No. 410 Surface Type with Metal Case  
8-12 Volts A.C. or 6-8 Volts D.C.

**Schedule C**

For return call systems. Resets all drops at once from a remote point. Individual reset of drops not possible. Also manual, mechanical reset in case of emergency.

Rooms may be called from the office or central station, or vice versa, and the call may be acknowledged.

Needs only one transformer.

Standard black finish. Special finishes, features, etc., complete installation data upon application.

## Edwards Annunciator Drops

### Schedule C

No. 8

### No. 8 Manual Reset Drop

An efficient drop used in all annunciates. Its compact design gives just as clear an indication but allows smaller, neater annunciators.

Positive Locking.

No. 8.....each \$4.50

No. 80

### No. 80 Manual Reset Drop

The older design used in all hand reset annunciators except the new annunciates.

Positive locking.

No. 80.....each \$4.50

No. 4

### No. 4 Electric Reset Drop

Used in all electric reset annunciators. Uses much less current for both indicating and resetting. The indication is a white arrow which points directly at the name card. When reset, the arrow drops out of sight behind the name card.

The front is of plain glass and as the arrow is between the glass and a dull black background, it can be seen from any angle. Cannot shake or jar out of adjustment. Locked in normal position and cannot indicate until current is passed through magnets.

No. 4.....each \$6.80

## Edwards Bronx Entrance Push Buttons

### Schedule S

Nos. 600 & 603

No. 602

No. 605

No. 606

No. 607

No. 608

No. 609

One piece type entrance push designed to cover all general needs. Sturdy mechanism is fully insulated. Binding posts and screws are large enough for No. 14 wire.

Standard finish satin brass.

Packed with screws in individual boxes for convenient shelf use.

## Benjamin Heavy Duty High Voltage Push-Buttons

### Non-Locking Type, Watertight

Listed by Underwriters' Laboratories  
5 Amperes, 125 Volts

Recommended for use with industrial signals but suitable for most any kind of electrical signaling.

Has quick make-and-break mechanism, positive acting, mounted on base of high heat molded insulating material for use with circuits carrying inductive loads.

Plunger is normally below the surface of the cap so the button cannot be operated accidentally. Waterproof rawhide gasket seals the plunger opening. All joints are watertight. Natural brass finish.

Furnished with unmarked name plate.

### Single Button

Has cast brass casing, with two mounting lugs, and one end boss tapped  $\frac{1}{2}$  inch.

Casing will be tapped for  $\frac{1}{2}$  or  $\frac{3}{4}$ -inch pipe one way or two way if specified, without extra charge.

No.	Each	Description	Wt., Lb.
8493	\$4.25	Open Circuit Type.....	2
8874	4.25	Closed Circuit Type.....	2
6998	1.00	Mechanism Only (Open Circuit).....	$\frac{1}{2}$
6627	1.00	Mechanism Only (Closed Circuit).....	$\frac{1}{2}$

### 2-Gang Button

Has cast brass casing with four mounting lugs and one end boss tapped  $\frac{1}{2}$  inch. Casing will be tapped for  $\frac{1}{2}$  or  $\frac{3}{4}$ -inch pipe one way or two way if specified, without extra charge.

Brass cover fastened to casing with No. 6-32 brass screws.

Name-plate is unmarked and regularly positioned as shown in illustration. Specify position of name-plates in relation to conduit entrance.

No.	Each	Description	Wt., Lb.
8495	\$6.00	Open Circuit, Both Buttons.....	3
8884	6.00	Open Circuit, One Button; Closed Circuit, One Button.....	3

### Locking Type—Watertight

For use in round-houses, mines, etc.

No. 8734

Has brass casing with two mounting lugs, and one end boss tapped  $\frac{1}{2}$ -inch.

Casing will be tapped for  $\frac{1}{2}$  or  $\frac{3}{4}$ -inch pipe one way or two way if specified, without extra charge.

Cover supplied with watertight stuffing box for plunger key.

Weight, 2 pounds.

No. 8733, Closed Circuit Type.....	each \$5.00
No. 8734, Open Circuit Type.....	each 5.00

## Edward Screwless Pushes

Schedule S

No. 630

No. 631

No. 632

No. 633

Hole can be drilled, wires connected and the flat subplate can be fastened to the surface with screws. Finished plate snaps firmly to subplate with no screws to mar the appearance.

Fully insulated; the contact is pure phosphor bronze, self cleaning in operation. The finished plate is heavy brass. Not sprayed, but brushed and lacquered.

No. 630 makes an attractive feature for all colonial type doorways. No. 631 is decorative but conservative. It is ideal for plaster walls as well as front entrances. No. 632 is smart and conservative and particularly adapted to narrow spaces. No. 633 is for dentists offices, etc.

No. ....	630	631	632	633
Each.....	\$ .37	.37	.27	.45
Style.....	Eagle	Oval	Rectangular	Indicator
Standard Package.	6	6	6	6

## No. 1786 Edwards Surface Type Weatherproof Push Button

Schedule S

Standard package, 1.

A neat solid brass push button absolutely dependable for use outside of buildings, residences, etc.

Also recommended for marine work, ice plants, chemical plants, and all places where dampness, exposure, or fumes will corrode and destroy the mechanism of an ordinary push button.

No. 1786.....	each	\$4.40
No. 1786C, With Plate Threaded for $\frac{1}{2}$ -Inch Conduit.....	each	6.80

## Philip and Lee Viza-Nite Illuminated Push-Button

BUILT WITHIN PROVISIONS OF NATIONAL ELECTRIC CODE

For chimes, door bells, horns, buzzers, and signal lights. Electrically illuminated by the same safe voltage used to ring the door bell or door chimes.

Simple to install. Requires no additional wiring; uses existing door bell wiring.

Packed 30 to a carton.

Each.....	\$1.50
-----------	--------

When ordering, specify whether for buzzer (6-8 volts) or chimes (10-12 volts).

### Edwards Cast Entrance Pushes

Solid Brass—Screwless  
Schedule S

No. 640

No. 641

No. 642

Solid brass casting, highly polished to a mirror-like finish; lacquered. Construction permits push to be mounted in any hole  $\frac{5}{8}$  inch and larger. Shell white rectangular center is easily depressed giving positive contact directly on to large terminal screws. Molded shell containing mechanism insulates this push button.

One-piece mechanism screws into door jamb or molding (screws are furnished) and cast escutcheon snaps firmly in place, being held by two extra strong fasteners. Cast escutcheon cannot be removed or mechanism tampered with without inserting screwdriver into slot in bottom and prying apart.

**No. 640 Rectangular Type.** Particularly adapted for narrow door jambs, etc. Escutcheon plate—width,  $1\frac{1}{16}$  inch; height,  $2\frac{1}{4}$  inches; thickness,  $\frac{3}{8}$  inch.

**No. 641 Octagonal Type.** An ideal design for most types of architecture. Escutcheon plate—width,  $1\frac{1}{16}$  inches; height,  $2\frac{1}{2}$  inches; thickness,  $\frac{3}{8}$  inch.

Standard package, 6.

No. ....	640	641	642
Each .....	\$1.50	1.50	1.50

**No. 642 Oval Type.** Represents the smart adaptation of the conventional front entrance push button. Escutcheon plate—width,  $1\frac{1}{16}$  inches; height,  $2\frac{1}{2}$  inches; thickness,  $\frac{3}{8}$  inch.

### No. 265 Edwards Low Voltage Return Call Push Buttons

Schedule C

For 3-wire return call systems. Also used where a number of pushes are installed, one for each bell, with one push to ring all bells.

Standard finish, nickel; brush brass when specified.

Standard package, one; approximate weight, 2 ounces.

No. 265. Insulated, Fits  $\frac{3}{4}$ -Inch Hole.....each \$2.15

### Edwards Low Voltage Multiple Contact Push Buttons

Schedule C

Has four insulated contact springs on which a plunger contacts when depressed. The contacts may be connected to provide three circuits with one common or strapped together to close two circuits with double contact capacity. Phosphor-bronze, wiping contacts.

Standard finish, nickel; brush brass when specified.

Standard package, one; approximate weight, 2 ounces.

No. 260, For Open Circuit, Fits  $\frac{3}{4}$ -In. Hole....each \$1.60  
No. 260C, For Closed Circuit, Fits  $\frac{3}{4}$ -In. Hole..each 2.35

### Edwards Flush Push Buttons

Schedule S  
For Low Voltage  
Flat Pearl Center Types

No. 620

No. 59

For general utility purposes. Stamped shell, phosphor bronze springs, self-cleaning contacts, self-forming binding posts. Spring clips hold push firmly in mounting hole.

No.	Each	Description	Std. Pkg.
620	\$ .40	Insulated, Fits $\frac{5}{8}$ -Inch Hole.....	12
59	.80	Insulated, Fits $\frac{3}{4}$ -Inch Hole.....	6

### No. 625 Raised Center Types

This push has a raised white glass center but is otherwise exactly the same as 620. Can also be furnished with black, red, blue, yellow and other color centers at no extra charge. White center is standard and furnished unless otherwise specified. Standard finish, nickel; brush brass when specified.

No.	Each	Description	Std. Pkg.
625	\$ .60	Insulated, Fits $\frac{5}{8}$ -Inch Hole.....	6

### Protruding Center Type

No. 621

No. 116

No. 622

With solid turned brass shell. Phosphor-bronze springs, self-cleaning contacts.

No. 621 has spring clips to hold push firmly in  $\frac{5}{8}$ -inch mounting hole. No. 622 has escutcheon for wood screw mounting in  $\frac{1}{2}$ -in. hole. No. 116 is for forced fit in  $\frac{1}{2}$ -in. hole.

No.	Each	Description	Std. Pkg.
621	\$ .85	Insulated, With Spring Clips, Fits $\frac{5}{8}$ -Inch Hole	6

### No. 850 Edwards High Voltage Push Button

125-250 Volt  
Underwriters' Listed  
Schedule S

Recommended for panel boards, plates, etc. Has only one moving member and two coil springs. Contacts are phosphor bronze of ample area, self-cleaning.

Ratings: 6 amperes at 125 volts a.c.; 3 amperes at 125 volts d.c.; 3 amperes at 250 volts a.c. and 1 ampere at 250 volts d.c.

Low voltage ratings by test: 10 amperes at 48 volts a.c., 32 volts a.c., 24 volts a.c. and d.c., 12 volts a.c. and d.c.; 8 amperes at 32 volts d.c.; 7 amperes at 48 volts d.c.

Standard finish, nickel; brushed brass when specified.

No. 850.....each \$3.30

## No. 146 Edwards Push Button Blocks With Numbered Pushes

### Schedule S

Of genuine molded bakelite, with a removable weighted base and a sponge rubber pad. Flush, numbered, midget pushes are supplied with block. Can be mounted on the side of a desk with the use of a concealed mounting hole provided for that purpose. Will not mar or deteriorate.

Standard finish, black, mahogany or walnut. Std. pkg. 1.

No. of Buttons.....	1	2	4	6
Without Cord.....each	\$2.75	3.25	4.75	6.85

## No. 197 Edwards Bakelite Directory Desk Pushes

### Schedule S

Has phosphor bronze scraping contacts and is fully insulated.

Base is covered with soft sponge rubber.

Has changeable name cards.

Standard color, black. Mahogany, oak or walnut, no extra charge.

Standard package, 1.

No. of Buttons.....	1	2	4	6
Without Cord.....each	\$3.25	3.90	5.60	9.50
Weight.....ounces	1	1	1	2

## Edwards All-Metal Desk Pushes

### Schedule S

A fine desk push for neat appearance and convenient usage.

Heavy gaged steel body, Bonderized. A smaller and neater unit, taking less space on the desk. Molded centers. Completely insulated. One row of buttons for up to 10 buttons. Over 10 buttons, double rows.

Names are almost flush with top plate thus preventing dust ridden crevices and allowing easily readable names.

One complete directory card which is easier to handle than individual cards.

Transparent celluloid keeps names clean.

Black finish is standard with brushed nickel top plate.

Specify exact number of buttons when ordering.

No. of Buttons	Without Buzzer		With Buzzer

## No. 107 Edwards Push Button Panels

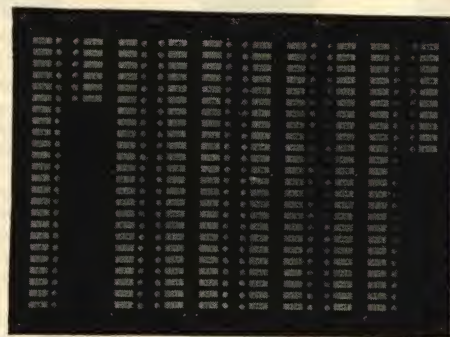

### Schedule C

5-Button

10-Button

240-Button

Designed to meet the requirements of small schools, public buildings, offices, etc., where no All or Master push button is required. This panel is ideal where space is limited and where economy is a factor.

Sizes 6 to 10 buttons inclusive are mounted on a plate which fits a 2-gang switch box; 11 to 15 buttons are mounted on a plate to fit a 3-gang switch box. Price does not include back boxes. Larger sizes are provided with a steel wall box for flush mounting. Terminal board is provided suitable for mounting in back box and is wired to panel on sizes 16 buttons and larger. A panel 17½x13 inches accommodates 240 buttons.

Brushed brass finish is standard.

3 to 15 Buttons.....	per button	\$2.75
16 Buttons and up.....	per button	4.10

## No. 650 Edwards Solid Forged Brass Push Buttons

### Schedule S

Recommended for better grade apartment and residence work.

Sturdy mechanism is entirely insulated and securely riveted to the solid brass case, making the push all one-piece.

Connections are easily made direct to two large screws on back of the push.

Can be mounted on metal trims without fear of short circuiting.

Oval head wood screws ¾-inch No. 6 are furnished standard to match finish.

Overall dimensions: Height, 3¼ inches; width, 1½ inches; depth, ½ inch.

Standard finish, brush brass with antique (black) mat.

Standard package, 1.

No.	Description	Each
650	Brush Brass with Antique (Black) Mat.....	\$1.45
650G	Chromium, Polished or Dull as Specified....	2.30

## No. 60 Edwards Flush Type Screwless Push Escutcheons

### Schedule E

For  $\frac{5}{8}$ -inch pushes. For use on plaster or where larger than the midget push is required. Iron sub-plate is first secured to the wall. There being a number of screw holes, it is always possible to engage a lath. The brass plate is then placed over the iron plate and push button pressed into place. Spring clips on side of the push button grip iron plate securely and hold button and top plate in place.

Standard finish, nickel; brush brass or cadmium, when specified.

Standard package, 10. Weight, 5 ounces.

No. 60.....each \$ .40  
Push buttons not included in price of escutcheons.

## Edwards Flat Push Button Escutcheons

### Schedule E

No. 62

No. 62D

For  $\frac{5}{8}$ -inch pushes. Used with either flat pearl center, round glass center or protruding bakelite center push button. Spring clips on side of pushes hold them securely in place. Plates are solid brass.

**When ordering**, state size of push to be used.

Standard finish, nickel; brush brass or cadmium, when specified.

Standard package, 10. Assortment permitted to make standard package.

No. ....	62	62D
Each.....	\$ .35	.35
Type.....	Rectangular	Diamond
Width.....inches	1 $\frac{1}{4}$	1 $\frac{1}{2}$
Height.....inches	2	2 $\frac{1}{4}$
Approx. Weight, Std. Pkg.....oz.	8	8

Push buttons not included in price of escutcheons.

## Edwards Bakelite Pendant Pushes

### Schedule S

Suitable for residence and hospital work. Bakelite finish will not become scratched or marred like wood. Light in weight, but exceedingly strong and will not warp, crack or chip off.

No. 67 has a flat pearl center.

Standard package, 6 of one color. Approximate weight, 1 pound.

No. 67, Black or Mahogany.....each	\$ .80
No. 67W, White Enamel.....each	1.00

## No. 206 Edwards Table Pushes

### Schedule S

Clamps on table without scratching. Used in connection with floor push or wall plug. Self-contained with button and contact built into spring clamp base. Self-cleaning, phosphor bronze contacts.

Standard nickel finish. Standard package, 6. Weight, 1 pound each.

No. 206.....each \$1.65

## Edwards Quick-Break Push Buttons

### 110-220-Volt

### Schedule S

No. 85

Sturdy mechanism and heavy contacts so designed that no matter how slowly the finger pressure is released the contact breaks quickly.

Standard finish, nickel; brush brass when specified.

Standard package, one.

No.	Each	Description	Voltage
85	\$3.00	Forced Fit in $\frac{3}{4}$ -In. Hole.....	110
85A	7.75	Forced Fit in $1\frac{1}{8}$ -In. Hole.....	220
85L	3.30	Locknut Type, Fits $\frac{7}{8}$ -In. Hole.....	110
85C	9.75	Closed Circuit, Forced Fit in $1\frac{1}{8}$ -In. Hole.....	110

## No. 235 Edwards Receptaplug

### For Non-Carpeted Floors or Rugs

### Schedule S

A compact attachment plug for use where No. 290 floor tread is used beneath floor covering and can be reached to change its position.

Receptacle mortises into floor. Rubber capped plug is inserted flush into receptacle leaving no bulge.

Plug will not fit standard lighting receptacles, thus preventing the possibility of shorting the line.

Satin brass finish with brown rubber cap.

Furnished without cord and push.

Weight, 2 pounds.

Standard package, 6.

No. 235.....each \$1.25  
Pin Only.....each .50

## No. 237 Edwards Floor Pushes

### For Uncarpeted Floors

### Schedule S

Provides a means of closing a signalling circuit at a fixed location on the floor.

Receptacle mortises into floor and allows pin only to extend above floor line. Slight pressure on pin causes contact.

Standard package, 6. Weight, 2 pounds.

No. 237, Floor Push with Pin.....each \$1.00  
Pin Only.....each .20

## No. 290 Edwards Dixie Floor Tread

### Schedule S

Recommended as a dining room push for calling servant during meals. Contact easily made by pressure at any point. Rubber covered base prevents push from sliding. The connectors are firm and reliable and whole device is designed for quick, easy installation. Cord enters through brass strap which holds it securely. Standard finish is satin brass.

Standard package, 10.

No. 290, Approx. Wt., 2 Pounds Each.....each \$1.50

**Edwards Answercalls**  
**For Return Call Push Button Stations**  
 8-12 Volts A.C. Standard  
*Schedule C*

No. 139

No. 140

It fits any standard single gang switch box  $2\frac{3}{8}$  inches deep and takes any standard push button switch plate.

**No. 139** has buzz audible signal with no contacts or pivots and requires no adjustment. May be varied after installation, from loud low tone to a soft high tone through hole in sub-plate. Marked binding posts easily accessible.

**No. 140** has annunciator type drop, which leaves a visual signal. Operation of push button, when call is answered, automatically resets drop. Recommended for use in Y.M.C.A. buildings, dormitories, and other places where it is desirable to leave an indication that a call has been made to the room during the occupant's absence.

No. 139, Flush Non-Indicating, Wt., 1 Pound.....each \$5.50  
 No. 140, Flush Indicating, Wt., 1 Pound.....each 11.40

**No. 136 Edwards Surface Type Return Call Push Button Stations**

D.C. or A.C.  
*Schedule C*

Designed particularly for installation in existing buildings.

Provides a neat appearing plate mounted on a shallow cast box, which provides entrance for conduit or open wires as desired.

The audible signal is an Edwards Double Adjustment Lungen Buzzer, and station is completely wired for installation with Edwards Return Call Push.

The cast box is rubberoid black, the plate brushed brass or nickel.

Standard package, 1; approximate weight,  $1\frac{1}{2}$  pounds.

No. 136, With Metal Plate.....each \$7.30  
 No. 136, With Bakelite Plate, If Specified.....each 7.70

**No. 137 Edwards Flush Type Return Call Push Button Stations**

D.C. or A.C.  
*Schedule C*

A flush plate for mounting on a standard single gang switch box.

The audible signal is an Edwards Double Adjustment Lungen Buzzer, and the station is completely wired for installation with Edwards Return Call Push.

Standard finish, brushed brass or nickel.

Standard package, one.

Approximate weight per standard package, 1 pound.

No. 137, With Metal Plate.....each \$6.15  
 No. 137, With Bakelite Plate, If Specified.....each 6.50

**No. 9 Edwards Door Openers**  
**Economy, Mortise Type**  
*Schedule S*

$4\frac{1}{2}$ -6 Volts D.C. or 8-12 Volts A.C.

Face plate and nosing made of solid brass. Used extensively for low cost apartment jobs.

Fits same size mortise as same shape openers of other manufacturers. Height,  $3\frac{3}{8}$  inches; depth,  $2\frac{1}{8}$  inches; thickness, 1 inch; nosing opening,  $1\frac{1}{16}$  inches; face plate,  $5\frac{1}{8} \times 1\frac{1}{4}$  inches.

May be used on either right or left hand doors.

Standard package, 6.

Approximate weight, 9 pounds.

No. 9.....each \$3.10

**No. 152 Edwards Door Openers**  
**Commercial, Rim Type, Solid Nose**

*Schedule S*

$4\frac{1}{2}$ -6 Volts D.C. or 12-16 Volts A.C.

For surface locks, thin frames, etc. Frame is cast iron with brass finish face plate and solid brass nosing.

Height, 2 inches; depth, 3 inches; thickness,  $1\frac{1}{8}$  inches; nosing opening,  $1\frac{1}{4}$  inches.

Approximate weight 2 pounds.

No. 152.....each \$7.50

**No. 154 Edwards Door Openers**

**Mortise Type, Roller Nose**

*Schedule S*

$4\frac{1}{2}$  Volts D.C. or 12-16 Volts A.C.

Height,  $3\frac{3}{8}$  inches; depth,  $2\frac{7}{8}$  inches; thickness,  $1\frac{1}{4}$  inches. Nosing opening,  $1\frac{1}{4}$  inches. Face plate,  $1\frac{1}{4} \times 3\frac{3}{8}$  inches. Brass finish.

May be used on either right or left hand doors.

Approximate weight, 2 pounds.

No. 154.....each \$7.00

## Edwards Burglar Alarm Springs

*Schedule S*

Placed in the frame several inches above the lower end of the upper sash—and the same distance below the upper end of the lower sash. Each Sash should be mortised so that the nosing of the spring will be set in the recess when the window is closed. Mortise should be continued (beyond the necessary point) to permit opening of window for ventilation. Without mortise, any one trying to enter house and knowing of window springs, can easily open window gradually, and hold spring depressed with the finger.

Edwards Springs, when used properly as described, are classified as follows:

Open circuit window springs—nosing depressed contact is closed. Closed circuit window springs—nosing depressed contact is open. Open circuit window springs—nosing depressed contact is open. Open circuit door springs—plunger depressed contact is open. Closed circuit door springs—plunger depressed contact is closed.

### Open Circuit Spring

<b>Closed Circuit Spring</b>				
39	\$.45	Door.....	2 x 5/8	6

## Edwards All-Purpose Contactors

*Schedule S*

Designed so pressure from any direction will depress the nosing. The contactor fits a 3/4-inch hole. Ideal for use on doors, windows, drawers, etc. Vulcoid insulation, phosphor bronze contacts of ample capacity for all low voltage work.

No. 44—Pressure on nosing opens the circuit. No. 45—Pressure on nosing closes the circuit. No. 46—Momentary contact; pressure on nosing makes, then breaks the circuit and repeats the operation in returning to normal.

Standard package, 6.

No.	44	45	46
Each.....	\$.80	.80	.80

## Edwards Burglar Alarm Traps

*Schedule S*

Installed with cord or wire stretched across entrances, open spaces or attached to doors, windows, etc. Slightest movement of cord or wire operates trap which makes and holds contact causing continuous ringing of bell without additional devices.

### Covered Type

Standard package, 6. Can be assorted.  
No. 27, For Open Circuit.....each \$2.00  
No. 27-C, For Closed Circuit.....each 2.00

### Uncovered Type

Standard package, 6. Can be assorted.  
No. 29, For Open Circuit.....each \$.50  
No. 29-C, For Closed Circuit.....each .50

## No. 26 Edwards Constant Ringing Drops

*Schedule S*

Especially designed for use in burglar alarm systems. With momentary closing of protective circuit this device causes bells to ring continuously, irrespective of subsequent opening of protective circuit. Plunger resets mechanism.

Recommended for battery systems where alarm may ring for several hours. Cuts own magnet out of circuit. Standard up to 16 V. a.c. or 12 V. d.c. Exact voltage must be specified. Standard package, 1.  
No. 26.....each \$3.50

## Edwards Burglar Alarm Relays

*Schedule S*

### No. 1238 Open Type For D. C. Only

Adjustable for open or closed circuit operation. Pure hard drawn silver contacts. Contacts 1 ampere; 250 ohms recommended for closed circuit systems. Standard package, 1.

20 Ohms (Allows 10 Ohm Line Resistance on 1.5 V. d.c. Supply).....	each	\$7.50
250 Ohms (Allows 175 Ohm Line Resistance on 6 V. d.c. Supply).....	each	8.75
251 to 600 Ohms. Specify Exactly.....	each	10.00

### No. 1239 Enclosed Type For A.C. or D.C.

A small, compact, open or closed circuit type as specified. Contacts 3 amperes 110 volts a.c., 6 amperes up to 48 volts a.c. Contacts 1 ampere, 110 volts d.c., 2 amperes up to 48 volts d.c.

Standard package, 1.	
8-24 Volts.....	each \$7.50
25-48 Volts.....	each 8.50
110 Volts.....	each 10.00

## No. 95-B Edwards Burglar Alarm Lock Switches

*Schedule T*

Lock switch to be mounted outside the door so persons having key may enter without giving alarm. Polished brass finish.

Approximate weight, 1/2 pound per standard package of 1.  
No. 95-B, With Rod to Go through Door, Fastened by Nuts Inside.....each \$7.95  
Extra Keys.....each .80

## Webster Electric Telespatch Systems

### For Railroads and Other Industries

Quick, convenient, dependable intercommunication is often the measure of industrial efficiency.

Provides instant voice-to-voice contact from a central point with individuals in the most remote sections of large railroad yards, ship yards, steel mills, or other widespread industrial operations. Their use makes possible the ready transmission of orders and reports, the coordination of processes and complete control of operations at all times.

#### Model S6357 Master Control Stations

Extremely rugged construction, housed in a gray metal cabinet and so designed as to allow the control operator an unimpeded view of the traffic area.

The standard system provides a maximum of 20 intercommunicating circuits, ten paging circuits and one paging "all-call" circuit.

Keys are of the sturdy telephone type and designed for rough service. Indicating lamps are of special design developed for intercommunication units supplied the U. S. Navy for shipboard use under actual battle conditions.

**Upper Keys.** Twenty individual speaker stations are contacted by switching these ten keys to an up or down position. The annunciator lights operate to indicate that contact button has been pushed at speaker station. An annunciator buzzer also gives warning of such a call. Ten of these speakers may be paged simultaneously by switching the ten keys to the "on" position.

**Lower Keys.** The ten paging areas are contacted by the three keys at the left and the two left-hand keys at the right. The key at the far right is the "all-call" key in both up (locking) or down (momentary) positions. The meter (center) is a gauge of outgoing volume and indicates when voice is at most effective speech level. Volume is controlled by knob below meter. Selector switch (left) provides for shifting from No. 1 to No. 2 amplifiers if necessary.

#### Model S6280-1 Microphone Units

Consists of a dynamic microphone mounted on a heavy steel desk stand. A push button is provided for operation of the talk-listen relay circuit.

Where desired a foot switch may be used in conjunction with this circuit.

The microphone is plugged into the small steel box and shielded wires are run to the amplifier unit.

Railroads find these systems ideal to speed up loading, unloading and handling freight, the making up of trains, and control of switching operations in large classification yards.

To meet rugged requirements of severe industrial service, many special features are incorporated in this equipment. Metal, weatherproofed housings are provided, and all parts are carefully selected for sturdy construction and long life operation.

#### Model S6358 Intercommunicating Speakers

Voice-to-voice contact between the master control station and individuals is carried on by means of these intercommunicating speakers. A maximum of 20 of these speakers may be connected to a standard control station. The speakers have a threaded pipe coupling for mounting on a pipe standard. A weatherproof push button, supplied by the user, is mounted on the pipe standard to actuate a buzzer and light at the control station when a call is initiated.

#### Model S6471-PM Paging Loudspeakers Model S6437 Matching Transformers

Model S6471-PM

Model S6437  
With Cover

Model S6437  
Cover Removed

Ten paging speaker circuits are provided for connecting to any combination of speakers within the limits of the power handling capacity of the paging amplifiers.

Designed for operation with high power amplifiers. Made with an anodized aluminum diaphragm and special weather-proofing for long life under severe weather conditions.

#### Model S6375 Amplifier and Relay Cabinets

Provided to deliver 50, 100, or 300 watts of audio power. A driver amplifier feeds the output amplifier from the 20-ohm dynamic microphone.

Standard master control units, with 20 intercommunicating speakers, require three relay panels with a total of 21 sensitive telephone type relays. These are used in the operation of annunciator lights and buzzers. A talk-listen relay switches circuits from "listen" to "talk" by means of the microphone push switch, or an added foot switch.

A load resistor panel contains mounts for standard 10-watt wire wound resistors. These provide proper loading of amplifiers regardless of the number of selector keys used. A 24-volt d.c. power supply is provided to operate talk-listen relay, annunciator relays, and "B" supply cutoff relays in the amplifiers. The steel cabinet in which these are housed is 74 inches high, 22 inches wide, and 16 inches deep.

### Webster Electric Teletalk Amplified Intercommunication Systems

Teletalk is amplified voice intercommunication. It is adaptable to every size and type of business. It is available in six basic models, each obtainable with special features to suit specific conditions. Capacities of individual models range from 5 to 24 stations. Systems based on any one model may be used for departmental operations or they can be combined to provide complete intercommunication for an entire office, plant or building operation.

Teletalk eliminates the countless, unnecessary and time-wasting steps and time consuming conferences that are inherent in any organization activity.

Three series available are M or Master, S or selective and SS or super selective.

**Models 105 and 110**

Particularly suited for use in small offices, service organizations, retail stores or factory groups, where intercommunication between a small group of executives or employees is desired.

Used for the purpose of securing information quickly, handling will-calls and alteration requests; information regarding credits, shipments and for similar purposes. Also used in large homes and apartments and on large estates for convenient and instant communication with servants.

Available in the M series in which the basic unit has complete control of the intercommunication and is not secretive, but speaker microphones can be used for two-way conversation. Also available in the SS series which is secretive and in which each station uses a basic Teletalk unit, each can select stations, call any other station or reply to calls with full secrecy. Available with earphones.

Cabinet is two-tone, solid walnut, hand-rubbed finish.

Size, 11½ inches wide, 8½ inches high, 6¼ inches deep. Power supply, 110-125 volts a.c. or d.c., 50-60 cycles. Station capacity, Model 105, 5 stations, Model 110, 10 stations. Power consumption, approximately 35 watts.

**Models 206 and 206-A**

Ideal for executives of small businesses; advertising agencies, lawyers' offices, architects and consulting engineers, and others, where appearance as well as the utmost operating convenience are the dominating factors.

For in a system made up of these models it is easy to select a station. Simply trip up the key of the station for instant communication. Has a telephone handset for confidential use. A broader service is supplied in the Model 206-A through the annunciator system, which identifies the station that has called in the event the person called was not at his desk at the time of the call.

Available in the M and S series. (See Model 105.)

Cabinet is two-tone solid walnut, with hand-rubbed finish and bronzed speaker grill. Model 206-A has bronzed annunciator panel with indicators of contrasting aluminum finish.

Size, 13½ inches wide, 7½ inches high, 6¾ inches deep. Power supply, 110-125 volts a.c., 50-60 cycles. Station capacity, 6 stations.

Send for catalog containing complete information on Teletalk Amplified Intercommunication Systems

**Models 212, 212-A and 224**

Ideal for professional and service organizations, Models 212, 212-A and 224 offer a wide range of service for executive and inter-department communication in the larger types of business.

Provide just the type of service demanded in larger organizations. For example, the conducting of conferences without any executive leaving his desk. This is particularly desirable. It means that a conference can be called by simply tripping the Teletalk selector keys bearing the name or number of each executive. As each one trips up the keys of those who are to be a part of the conference, every man listens to the words of the speaker and each one can speak as thoughts occur to him. All the time consumed in going to one office or waiting for the group to gather is eliminated. Has a telephone handset for confidential use.

Available in the M and S series. (See model 105.)

Cabinet is two-tone solid walnut, with hand-rubbed finish and bronzed speaker grills.

Size, 13½ inches wide, 7½ inches high, 6¾ inches deep. Power supply, 110-125 volts a.c., 50-60 cycles. Station capacity, 12 stations with or without annunciators, 24 stations without annunciators.

**Models 512, 512-A and 524**

Designed for the business executive who desires the utmost in convenience, appearance, simplified operation, maximum secrecy and the widest possible range of service.

With separate microphone on top of the cabinet. The speaker is for reception only. Has a telephone handset for confidential use. No manual operation of a Talk-Listen switch is required. The user need only trip the keys in the panel to talk with one or a number of stations. If any one of these stations is busy, the amber pilot light goes out. The light will go on again as soon as the line is clear. Then proceed to talk. In the event the station with which you wish to communicate is located in a noisy location, the volume can be greatly increased by pushing the extra-volume knob located under the speaker.

Available only in S series.

Cabinet is two-tone burl walnut with hand-rubbed finish and bronzed speaker grill and inbuilt microphone.

Size, 13½ inches wide, 7½ inches high, 6¾ inches deep. Power supply, 110-125 volts a.c., 50-60 cycles. Station capacity, 12 stations with and without annunciators, 24 stations without annunciators.

## Webster Electric Teletalk Amplified Intercommunication Systems

### Speaker-Microphones

No. 5A-45B

Many buyers who install a Teletalk Intercommunication System—particularly an M series system—find there are some locations at which complete intercommunication service is not necessary.

To meet this requirement and reduce expense for the purchaser, we recommend the use of Speaker-Microphones. However, where paging only is required, Speaker-Microphones will be used at all stations except where the paging originates.

**Model 5A-45** will prove highly satisfactory wherever the noise level is low and the room or department is small. This unit can be used with all models in M series for two-way communication; in the S series, for one-way communication and with all paging models.

**Model 5A-45B** is intended for use only with annunciator models.

**Model 10B-45** is a large, powerful unit which can be used in both M and S series. It is primarily intended for use where the area to be covered by either intercommunication or paging is

large or where the noise level is higher than can be overcome by the power of the No. 5A-45 unit.

**Model 8C-45** serves the same purposes as the No. 10B-45 except that it is required where the air has a high moisture content, or where the speaker must be located out-of-doors.

Equipped with button to call in to master station.

### Webster Electric Paging Systems

#### Models 1006 and 1012

#### Models 10112, 10212, 10124 and 10224

With Amplifier

It is an established fact that in paging, an individual responds much quicker to a voice calling his name than he does to a signal which has been assigned to him.

Many people whose places of business are now equipped with Teletalk Intercommunication Systems find that they are not getting maximum benefit from them because of the tendency to use the system to too great an extent for paging. These two models—for paging only—are the answer. They are particularly designed for office paging.

Operation is simple and the scope of service is broad.

**Model 1006** has a capacity of six stations. Each station may be paged individually, or by the use of the all-call feature, all stations can be paged at one time.

**Model 1012** has a capacity of twelve stations. It also has the all-call feature.

Cabinet is two-tone solid walnut, with hand-rubbed finish and bronzed speaker grille.

Size,  $13\frac{1}{8}$  inches wide,  $7\frac{1}{8}$  inches high,  $6\frac{3}{4}$  inches deep. Power supply, 110–125 volts a.c., 50–60 cycles.

Designed to bring Teletalk's fine design and excellent tone as an answer to the many requests for a satisfactory system for paging for factories, warehouses and in other locations where the noise level is high.

Features are the inbuilt microphone in the instrument panel, all-call or group-call provisions, a separate, remotely located, beam power amplifier of either 12 or 50 watts output with tamperproof adjustments for tone and volume. The control cabinet, which can be placed on the operator's desk is the only part of the system that need be visible.

Any of the Teletalk speakers or special speakers, if required, can be used with these models.

Cabinet is two-tone solid walnut with hand-rubbed finish. Amplifier is metal enclosed with three-tone, modernistic finish.

Cabinet size,  $9\frac{3}{8}$  inches wide,  $7\frac{1}{2}$  inches high,  $5\frac{1}{4}$  inches deep; 12-watt amplifier size,  $13\frac{3}{4}$  inches wide, 8 inches high, 7 inches deep. Power supply, 110–120 volts a.c., 50–60 cycles. Station capacity, Model 10112, 12 stations with all-call switch; Model 10212, 12 stations with 2 group-call switches; Model 10124, 24 stations with all-call switch; Model 10224, 24 stations with 2 group-call switches.

Send for catalog containing complete information on Teletalk Amplified Intercommunication and Paging Systems.

## Webster Electric Teletalk Public Address Equipment

### Model 18-50 50-Watt Amplifiers

Specifically designed for use in a sound system requiring high volume levels. It has all of the features necessary to provide maximum efficiency and value. A full selection of output impedances is available on four speaker plug receptacles. It has the further advantage of allowing booster amplifiers to be added to make up a sound system of 500 watts total power output. A maximum of nine Model 19-50 booster amplifiers may be connected, with interconnecting cables furnished.

All necessary amplifier connectors are furnished and are plainly marked. A minimum of controls are employed to simplify operation. All components are operated well below their ratings. Separate volume and mixing controls are provided for each of two high impedance microphone inputs and one dual tone control provides attenuation of bass or treble response. Inverse feedback is incorporated to provide maximum power output with minimum distortion. A cathode ray "eye" tube is used as an amplifier overload indicator to permit the amplifier to be operated up to its full power output without danger of overload distortion.

### Model 50 TN 50-Watt Portable Sound Systems

Consists of:

- 1—Model 18-50 amplifier,
- 1—Model S4659 carrying case for Model 18-50 amplifier,
- 1—Model S4546-1 crystal microphone with 20 feet of shielded cable and plug,
- 1—Model S4549 microphone floor stand,
- 2—Model S4368 heavy duty 12-inch permanent magnet dynamic loudspeakers, each equipped with 50 feet of rubber covered flexible cord and plug,
- 1—Model S4637 speaker carrying case.

All of this equipment except the microphone and stand is contained within two portable carrying cases, one hinged top type for the amplifier and one split type which forms the loudspeaker baffles when open. Cases are of heavy plywood construction with metal braced corners and are finished in black Fabricoid.

Catalog Information on Other Models Available on Request

## Guided Radio Portable Electric Megaphones

Amplifies 2500 Times

Used wherever it is necessary to lift the human voice above the tumult of traffic, conflagration, storms, industrial noises or sport spectators.

Equipped with batteries for self-operation and portability. Light in weight.

Has weatherproof case and is furnished with combination handle and shoulder strap.

### No. A126 Chief Amplifier

Provides more than 1000 ten-second messages without recharging batteries. Equipped with internal storage battery. Output, 20 watts. Furnished with self-contained charger for operation from 120 volts, 60 cycles.

Length, 12 $\frac{5}{16}$  inches. Width, 7 inches. Height, 8 $\frac{1}{4}$  inches. Weight, 23 pounds.

### No. A127 Deputy Amplifier

Provides more than 5000 ten-second messages without battery replacement. Has standard radio dry batteries. Output, 5 watts.

Length, 12 $\frac{5}{16}$  inches. Width, 5 inches. Height, 8 $\frac{1}{4}$  inches. Weight, 14 pounds, including batteries.

### Megaphone

Range: (under normal conditions) with No. A126 amplifier, 1 mile or more distinctly. With No. A127 amplifier,  $\frac{1}{2}$  mile or more distinctly.

Dimensions: length, 20 inches; maximum diameter, 13 $\frac{1}{2}$  inches. Weight, 9 pounds.

## Inter-Communication Phone Systems

## Without Exchange Trunks

This system has gained universal recognition for providing reliable telephone communication in installations requiring limited local service and not requiring outside or city connections.

Ideal for offices, factories, stores, schools, apartments, institutions.

## No. 1-A Systems

Features selective ringing and selective talking service and provides as many separate simultaneous conversations as there are pairs of phones installed. The total number of stations which may be connected is 25

## No. 6240-C Telephones

## Desk and Wall

The No. 6240-C comes in two styles, desk and wall. When ordering, specify the style of instrument desired.

No. 6240-C 12

Code No.	No. of Buttons	Station Capacity	Description
6240-C6	6	7	Sel. Ring, Sel. Talk
6240-C12	12	13	Sel. Ring, Sel. Talk
6240-C16	16	17	Sel. Ring, Sel. Talk
6240-C24	24	25	Sel. Ring, Sel. Talk

## Accessories

The No. 1-A system requires the following material for completing an installation:

**Cable.** With suitable conductors, (2 pairs No. 18 gage for battery supply, and 1 pair No. 22 gage, for each station in the system). Lead covered cable is recommended for all locations where moisture is present or where cable may be exposed to mechanical injury.

**Stranded Flexible Cable.** Used where it is necessary to move the desk telephone about upon a desk. Conductors required depend upon number of buttons in the key box.

**Cable Terminals.** Cable terminals should be provided wherever there is a junction between cables, and, usually, at desk mountings.

**Rectifier.** Recommended in place of dry cells wherever reliable 110 volt a.c. is available.

No. 6240-C 24

## No. 11 Systems

Provides selective ringing and common talking operation. Adaptable to establishments where conversations can be limited to one at a time. Used extensively in residences, banks, warehouses, and stores.

## No. 2527 Telephones

No. 2527-C 8

Selective ringing and common talking type.

Suitable for surface wall mounting.

No. 2539-C is a flush type wall telephone which is combined with a metal outlet box and a set of outlet box hangers.

Code No.	Code No.	No. of Buttons	Station Capacity
2527-C2	2539-C2	2	3
2527-C3	2539-C3	3	4
2527-C4	2539-C4	4	5
2527-C6	2539-C6	6	7
2527-C8	2539-C8	8	9

## No. 6347-C Telephones

No. 6347-C 8

A surface mounting wall type instrument.

The housing is of molded phenol compound with the push button unit mounted at the top. The transmitter and receiver are made up in the form of a handset.

Code No.	No. of Buttons	Station Capacity	Description
6347-C4	4	5	Sel. Ring, Com. Talk
6347-C8	8	9	Sel. Ring, Com. Talk

## Inter-Communication Phone Systems

## Without Exchange Trunks

## No. 11 Systems (Continued)

## No. 6345-C Telephones

Consists of a handset telephone desk set with push buttons mounted in the base together with an apparatus box containing a bell and connecting block.

## No. 6345-C8 Handset

Code No.	No. of Buttons	Station Capacity	Description
6345-C4	4	5	Sel. Ring, Com. Talk
6345-C8	8	9	Sel. Ring, Com. Talk

## Accessories

The following material is necessary to complete the installation of a No. 11 System:

**One No. 51-H Retardation Coil.** Installed near battery.

**Cable.** Three common wires, No. 18 gage, and one individual wire, No. 22 gage, for each station.

**Dry Cells.** Five cells required. If 110 volt a.c. current is available, a 6-volt rectifier may be used.

## No. 6339-C Telephones

## No. 6339-C Handset

Consists of a handset hook switch box, push button block and apparatus box.

The hook switch box can be mounted at the side of a desk, on a wall or any vertical surface.

Code No.	No. of Buttons	Station Capacity	Description
6339-C4	4	5	Sel. Ring, Com. Talk
6339-C8	8	9	Sel. Ring, Com. Talk

## No. 12 System

## Master Station—Common Talking

This system provides for communication from a central point, master station, to several outlying stations.

The master station is equipped with push buttons, one for each outlying station. By operating these buttons, each outlying station may be rung separately.

The outlying stations are each equipped with one ringing button only, by which they are able to signal the master station.

Only one conversation can be carried on at one time.

The capacity of this system permits the operation of one master station and from 2 to 16 outlying stations.

## Instruments

**Master Stations.** Any of the instruments described under system No. 11 may be used as master stations in system No. 12 up to the capacities indicated. The No. 2527-C type telephone may be furnished with 10 to 16 push buttons to secure greater capacity.

**Outlying Stations.** The same type of instruments described in system No. 11 may be provided for outlying stations. These single button instruments are indicated by the following codes:

Code No.	Type	Code No.	Type
2527-C1	Surface Wall	6345-C1	Cradle
2527-C1	Flush Wall	6339-C1	Suspended
6347-C1	Surface Handset		

## Accessories

The following material is required for completing a No. 12 system:

**One No. 51-H Retardation Coil.** Installed near battery.

**Wire.** Three common wires are required throughout the system, No. 18 or No. 19 gage. In addition, one individual wire between each outlying station and the master station, No. 22 gage. It will be found economical to use cable when there are long runs or a large number of wires.

**Cable Terminals.** Terminals are desirable at junction points and distribution centers.

**Dry Cells.** Five cells are required when the more distant outlying station is 750 feet or less distant from the master station.

Inter-Phone Systems  
Without Exchange Trunks  
No. 14 and No. 14C Systems  
Two-Station—Private Line

Two-station private line telephones are used extensively for communication between rooms in a residence, between offices, between shipping room and warehouse, and to fill other similar requirements.

The No. 14 system requires two wires for connecting the two telephone instruments and one set of three or four dry cells at each telephone.

The No. 14C system requires three wires for connecting the two telephones and one set of five dry cells connected at one station only. Requires retard coil.

In either system, one station can ring the other by simply depressing the button on the set. Wall or desk sets may be used interchangeably.

Code No.....	2527-C1	2539-C1	6345-B1	6339-B1	6347-C1
No. of Buttons	1	1	1	1	1
Description..	Surface Wall	Flush Wall	Handset Desk	Suspended Wall	Wall Handset

No. 15 System  
Code Ringing—Common Talking

No. 6345-B1  
Handset Desk Telephone

Each station is equipped with one push button, which, when depressed, signals every other station.

The various stations are called by signalling each one with a different code ring. Thus two rings signals station No. 2, three rings signals station No. 3, etc.

Capacity of system, 2 to 6 stations.

The No. 15 system may be used to advantage where telephone service is limited and where code ringing is not extensive enough to cause annoyance. Stockroom and associated warehouses, grouped green houses, guard stations, and similar installations are well served by No. 15 system.

The instruments used have the same general appearance as those shown under system No. 14. They are indicated in the following table:

Code No.....	2527-C1	2539-C1	6345-B1	6339-D1	6347-C1
No. of Buttons	1	1	1	1	1
Description..	Surface Wall	Flush Wall	Handset Desk	Suspended Wall	Wall Handset

Accessories

Installing material as follows is required for the No. 15 system:

- One No. 51-H Retardation Coil.** Installed near battery.
- Wires.** Four wires are needed for connecting the phones.
- Dry Cells.** No more than 5 dry cells connected in series are used for this system.

Inter-Phone Cable

For Interior Use

For Outside Use

The conductors are provided with a single acetate yarn and single cotton insulation, which is colored in such a way that each pair and each single wire can be identified. The cable core is then impregnated with a wax compound and is covered with servings of paper and a heavy cotton braiding. In the case of lead covered cable, a lead sheath is placed over the core instead of the cotton braiding.

Three General Types of Cable are Provided

1. **INTERIOR CABLE** with outside braiding treated with gray fireproofing paint. Use only in dry places.
2. **INTERIOR CABLE** with brown glazed cotton outside braiding. Use only in dry places where exposed to view.
3. **OUTSIDE CABLE**, lead covered. Always use this cable outside, and inside where there is apt to be moisture even in a small degree. In conduit installations lead covered cable should be used.

\*Quantity included under the heading "Conductors" includes spares.

## Brach WJZ Potheads for Pedestals

In pedestal locations and other places where space is extremely limited it is desirable to have a terminal pothead that is extremely small and at the same time offers the advantages of high insulation, accessibility and a number of circuits.

The design includes a bakelite panel mounted on a heavy cast zinc box. Cable enters through a rubber sealed stuffing box. Provision is made for completely filling the pothead with pitch after cable is installed.

Bakelite panel on front of pothead and back cover are both removable. Panel is backed with waterproof paper.

8-Wire

Size, width and depth approximately 2 7/8 inches. The height depends upon the number of wires.

No. ....	WJZ-8	WJZ-10	WJZ-12	WJZ-19
No. of Terminals.....	16	20	24	38

NOTE: It is important to advise the diameter of the lead cable so that we can furnish the correct size watertight gland bushing.

## Brach Pole Top Potheads

No. PT-20

The purpose of this pothead is to provide either a sealed cable end with accessible terminals for testing and interconnecting, or a junction terminal to facilitate the connecting of cables to cables and open wires.

Cables brought up behind the terminal panel are skinned and passed out through the hollow studs of the binding posts and soldered. The enclosed chamber behind the terminal panel can then be entirely filled with compound. Cables or wires brought up in front of the terminal are connected to the binding posts in the

usual manner and can be sealed with compound in a well provided for this purpose. Compounding chamber, compounding well, base, and mounting bracket are castings. Panel is of solid 3/8 inch bakelite. Solid copper cover is permanently chained to base.

No. ....	PT-10	PT-20
No. of Terminals.....	10	20
Height.....inches	8	12
Diameter Overall.....inches	4 1/2	4 1/2

## Brach Terminals In Sheet Metal Cabinets

Terminals in sheet metal cabinets are furnished to order.

Specify the type of terminal and the number of circuits required.

Be sure to advise size and location of entrance holes.

## Brach Universal Terminal Strips

### Type 2500

Each terminal strip is made in ten units moulded in one piece. Terminal strips may be sawed apart into smaller groups or single units. Each unit has its own mounting hole.

Sliding links are flanged to lock the nuts in place. Strips are made of bakelite. Each section of a strip may be further isolated by means of removable barriers. Insulated covers can be provided to fit over strips. Wires may be transferred or loops cut out without opening main circuit.

Size, 9 1/2 inches long, 1 3/4 inches wide, 1 3/4 inches high.

### Type 2500T

The same general description as Type 2500, but in addition carries Auxiliary Transfer Terminals, permitting two or more wires to be connected to each side of the terminal. These transfer terminals are desirable where temporary connections are needed without disturbing the permanent connections.

Size, 9 1/2 inches long, 2 3/4 inches wide, 1 3/4 inches high.

ORDERING REFERENCE NOTE: By the addition of the letters B and C to any of the above ordering references we will understand that barriers and covers are to be included; or by adding B only that barriers only are required in addition to the terminals. For example: 2500TBC would be the 2500 terminal with extra transfer terminals, barriers and cover.

### Type 1500

A smaller and a more compact unit than the Type 2500 Terminal Strip, but since silicon bronze screws are used throughout with heavy specially designed nuts they are far stronger than their size would normally indicate. Each terminal is made of eight units molded in one piece and may be separated into smaller groups or single units. Its design includes the same features as the 2500 strip including slide links, large creepage distance and resistance to the effects of gases, water or chemical action. Insulating cover can be furnished.

Size 6 inches long, 1 1/4 inches wide, 1 3/16 inches high.

### Type 1500T

Same general description as Type 1500, but in addition carries auxiliary transfer terminals, permitting two or more wires to be connected to each side of the terminal. These transfer terminals are also desirable where temporary connections are needed without disturbing the permanent connections.

Size 6 inches long, 2 3/8 inches wide, 1 3/16 inches high.

**Brach Entrance Panels  
For Telephone Wire and Cable**

Meets the demand for a rugged, combined protection and test panel for indoor mounting where cables or wires enter headquarters or fire houses.

Panel provides for each wire a heavy duty Rare Gas Lightning Arrester, a \*3-ampere 2000-volt line fuse, a slide test link and a common ground buss with terminal posts top and bottom so that ground wires can be connected in two places, all assembled on a 3/4-inch ebony asbestos panel mounted upon four porcelain insulators.

The slide test link permits opening a circuit without disturbing or injuring any

connected wire. The test links are marked to distinguish the circuit.

Panels can be mounted directly to the wall and set off from wall by porcelain knobs. Furnished mounted in sheet metal cases which may be fastened to the wall, these cases being provided with suitable doors and locks; or they can be furnished in weatherproof housings for mounting outdoors.

The arrester cartridges are heavy duty No. 272 Thermal Element Rare Gas Cartridges and are non-grounding. One is provided for each wire and meets the National Fire Protection Association requirements.

Fuses are nitted type rated at 2000 volts. One is provided for each wire.

Other size panels than those listed can be built to specifications.

Designation tags marked to specifications by stamp die markings on black fibre, filled in white are provided. They are shipped blank if no specification accompanies order.

Sneak current fuses, if not otherwise provided, may be had on protective panels embodying this additional equipment.

**Entrance Panel in Sheet Metal Cabinets**

The above entrance panels are frequently furnished in sheet metal cabinets with brass hinges and locks.

As the number of circuits vary we will be glad to quote if advised the arrangement preferred and the number of circuits required. Be sure to advise size and location of entrance holes.

**Brach Rare Gas Lightning Arresters**

The sensitivity and uniformity of Rare Gas Lightning Arresters, together with their ability to absorb extremely heavy surges without permanently grounding has caused their wide spread acceptance for the protection of Telephone, Railway Signalling, and Municipal Fire and Police Alarm Circuits. The arrester gap is hermetically sealed in an atmosphere of inert rare gases and is not subject to moisture, corrosion, insects or dirt.

**Type MCD Brach Rare Gas Lightning  
Arrester Cartridges**

The cartridge unit supplies the demand for a small size thermal element lightning arrester which fits the clips of standard carbon mica block units with which it is interchangeable.

Will operate under conditions where humidity is high. Gives good protection.

Size 3/8 inch wide, 1 3/8 inches long, mounted on 1/2 inch centers.

No. ....	MCD-2	MCD-4	MCD-6
Each. ....			W
Breakdown volts. ....	200-400	400-600	600-900

**Brach Rare Gas Heavy Duty Lightning  
Arresters**

Where space is not at a premium the larger Heavy Duty Rare Gas Arresters are recommended. A few of the many available types are listed.

In the triple path types, two line electrodes and a ground electrode are contained in the same arrester cartridge facilitating the equalization of surge voltages between twisted pair conductors and cable conductors.

Standard voltage breakdown ranges 200-400, 350-600 volts a.c. Special ranges available from 90 volts to several thousand volts.

**Type 27-A Arresters**

Single line type. Recommended for fire alarm circuits, telephone and telegraph circuits.

The base is made of bakelite, and carries two binding posts, one for line and one for ground. Uses No. 27-M cartridge only.

Size 5 inches long, 1 1/4 inches wide and 2 inches high.

No. 27-A, Arrester Complete .....	each
No. 27-M Cartridge Only .....	each

**Type 26 Arresters**

Same as Type 27-A except that it is equipped with an auxiliary air-gap under the cartridge to provide an additional path for any discharge in excess of the capacity of the cartridge.

Size 5 inches long, 1 1/4 inches wide and 2 inches high.

No. 26, Arrester Complete .....	each
No. 26-M, Cartridge Only .....	each

## Brach Rare Gas Heavy Duty Lightning Arresters

### Type 272 Arresters

Designed for telephone and telegraph circuits, where a Rare Gas Arrester is desired in combination with a line fuse.

The arrester is also largely used on single or grounded telephone lines.

Fuses are of the nutted end type, 5 ampere unless otherwise specified. Uses No. 272 Cartridge only and No. 53 Fuse only. Underwriters' Laboratories approved. Size  $8\frac{3}{4}$  inches long,  $4\frac{3}{8}$  inches high, 1 inch wide.

Type No. 272, Arrester Complete.....each .....  
No. 272, Cartridge Only.....each .....  
No. 53, Fuse Only.....each .....

### Type 184 Arresters

Single Line, 2,000 Volts

Underwriters' Laboratories approved for fire alarm and other signal services.

Especially designed to fulfill the requirements of the Red Book with respect to location at the entrance of headquarters.

Consists of 3 operating portions: Lightning protective cartridge No. 272; sneak current fuse No. 53-S; regulation 2,000 volt fuse No. 53, 5 ampere unless otherwise specified.

### Type 284-C Housed Arresters

Double Line Outdoor

A lightning arrester suitable for use where a single pair of wires is to be protected by heavy duty arrester cartridges arranged to be mounted outdoors without fuses. The housing for the arrester cartridges consists of a porcelain base with heavy phosphor bronze clip terminals and the entire unit is covered by a can type weatherproof cover.

Mounting bracket provided. Cartridges are heavy duty, non-grounding Type 272 Thermal Element Neon Cartridges.

Meets the latest requirements of the National Fire Protection Association.

Type No. 284-C, Housed Arrester Complete.....each .....  
No. 272, Cartridge Only.....each .....  
Size  $9\frac{1}{2}$  inches long,  $4\frac{1}{2}$  inches high,  $\frac{1}{2}$  inch wide.  
Type No. 184, Arrester Complete.....each .....  
No. 272, Cartridge Only.....each .....  
No. 53, Fuse Only.....each .....  
No. 53-S, Sneak Current Fuse Only.....each .....

### Type 60 Arresters

Double Line

For all low voltage protection. Base arranged for 2 cartridges taking care of a pair of circuit wires.

Auxiliary saw tooth gaps provided.

Uses No. 27-M cartridge only.

Size  $5\frac{3}{8}$  inches long,  $3\frac{1}{8}$  inches wide,  $2\frac{1}{4}$  inches high.

No. 60, Arrester Complete.....each .....  
No. 27-M, Cartridge Only.....each .....

### Type 40-B Arresters

Double Line with 2,000 Volt Fuses

Recommended for all telephone and train dispatching circuits. Designed to accommodate the usual two wires or pairs of such circuits. Auxiliary air gaps are included.

Equipped with line fuses rated for 2,000 volts complying with the requirements of National Board of Fire Underwriters.

Uses No. 27-M cartridge only and No. 53 fuse only. Size  $6\frac{3}{8}$  inches long, 4 inches wide,  $2\frac{1}{4}$  inches high.

No. 40-B, Arrester Complete.....each .....  
No. 27-M, Cartridge Only.....each .....  
No. 53, Fuse Only.....each .....

## Type 29SB Brach Switchboard Arresters

Listed as Standard by Underwriters' Laboratories

Switchboard is logical location for lightning arresters in central offices. Not only facilitates wiring but is preferred location because fuses may be readily maintained.

Can be furnished in polished or satin chromium finish, lacquered brass and gold plated ferrules, cadmium or black bakelite.

Fuses can be furnished in polished bakelite with chromium or brass terminals.

Can be used with horizontal or perpendicular mountings.

Casing,  $2\frac{7}{8}$  inches long. Overall, 4 inches.

Type No. 29SB, Arrester Complete.....each .....  
No. 29SB, Cartridge Only.....each .....  
No. 53, Line Fuse.....each .....  
No. 53-S, Sneak Current Fuse.....each .....

When ordering specify type of finish desired on cartridges.

## Brach Portable Rare Gas Arrester Testing Sets

The Brach Portable Testing Set is a small compact instrument and is capable of testing all types and makes of vacuum and rare gas lightning arresters.

This testing set can be used in determining the effectiveness of air-gap arresters as well.

It is good practice to make periodic tests of lightning arresters, or after a series of bad storms, to obtain uniform protection.

No. R2605, Set Complete.....ea. ....  
No. R2605-55 Batteries only.....each .....

## Type RTC-2 Vincent Rare Gas Relays

For Noise Elimination on Telephone Lines

In metallic telephone circuits the use of divided ringing to ground in order to simplify code or harmonic ringing on party lines has often resulted in noisy transmission. When a RTC-2 Vincent Rare Gas Relay is connected in series with each grounded bell circuit the line is automatically freed from ground during voice transmission and ground current noises are eliminated. The higher ringing voltages, however, pass through the relays and ring the bells. The relay is also applicable to the central office drop ground connection.

Furnished with an ingenious clip requiring a single bolt to mount it within the bell box or at any other convenient location.

The relay has no moving parts and is unaffected by atmospheric or temperature changes. Lines equipped with the relay are

free from grounds in normal operation and therefore free from noises which would ordinarily be picked up through ground connections. Can be used on magneto or common battery lines with either harmonic or code ringing. Ringer load is removed from voice circuit, improving transmission.

Length,  $2\frac{1}{2}$  inches. Height, when mounted,  $1\frac{1}{2}$  inches.

## Struthers-Dunn General Control Relays

Used for the control of heaters, signals, small motors, etc.

Wiping contacts are of fine silver; the design of the shading coil insures quiet a.c. operation. Each relay is tested by two different inspection departments before shipment.

Available with any desired number of poles. Various types of housing can be furnished.

### Midget Relays

Base size,  $2\frac{3}{4} \times 1\frac{7}{8}$  inches.

Coils furnished as specified: 6 to 230 volts a.c.; or 2 to 230 volts d.c.

Contacts: 6 amperes, 115 volts a.c.; 3 amperes, 230 volts a.c.; 0.5 ampere, 115 volts d.c. Non-inductive loads.

#### Type 1BXX

Type	Description	Each
1HXX	S.P., D.B., Front Contact.....	\$4.30
1BXX	D.P., S.B., Front Contact.....	5.50
1XXH	S.P., D.B., Back Contact.....	4.30
1XXB	D.P., S.B., Back Contact.....	5.50
1XHX	S.P., D.B., D.T.....	4.90
1XBX	D.P., S.B., D.T.....	6.00

### Power Relays

Coils furnished as specified: 6 to 550 volts a.c.; or 2 to 230 volts d.c.

Contacts: 30 amperes, 115 volts a.c.; 30 amperes, 230 volts a.c.; 4 amperes, 115 volts d.c. Double break types are rated 20 amperes, 220 volts a.c.; 6 amperes, 115 volts d.c. Non-inductive loads.

#### Type 8HXX

Type	Each	Description	Base Size Inches
8HXX	\$7.50	S.P., D.B., Front Contact.....	$4\frac{1}{4} \times 3$
8BXX	9.80	D.P., S.B., Front Contact.....	$4\frac{1}{4} \times 3$
8CXX	11.20	T.P., S.B., Front Contact.....	$4\frac{1}{4} \times 3$
84XXH	9.50	S.P., D.B., Back Contact.....	5 x 3
84XXB	10.90	D.P., S.B., Back Contact.....	5 x 3
84XXC	12.40	T.P., S.B., Back Contact.....	5 x 3
84XXB	12.70	D.P., S.B., D.T.....	$6\frac{1}{4} \times 3$
8AXA	9.80	S.P., S.B., D.T., Separate Circuit.	$4\frac{1}{4} \times 3$
84BXX	13.80	D.P., S.B., D.T., Separate Circuit	$6\frac{1}{4} \times 3$

## Struthers-Dunn Mechanical Latch-In Electrical Release Relays

#### Type 5HXX

Used for push button control or similar applications.

Two coils: one coil closes contacts which latch closed; the other coil, when energized, trips the latch and opens the contacts.

Base size,  $4\frac{1}{2} \times 3\frac{3}{4}$  inches.

Available with any desired number of poles. Midget types are also available.

Type	Each	Description	CONTACT RATING, AMPS.—			
			115V. A.C.	230 V. A.C.	115V. D.C.	230 V. D.C.
5HXX	\$10.10	S.P., S.T., D.B. ....	30	20	6	1
5BXX	11.50	D.P., S.T., S.B. ....	30	25	4	.5
5AXA	11.50	S.P., D.T., S.B. ....	8	6	2	.5

## Struthers-Dunn Thermostatic Control Relays

Used for the control of heaters, refrigerator units, pressure, etc.

Protective resistor is part of the relay. Instrument contacts make but never break current.

For use with 3-wire H-L-C instrument or push button.

Used Where Control Circuit and Load are Fed by Same Line

Type	Each	RATING, AMPERES		Base Size Inches
		115 Volts A.C.	115 Volts D.C.	
8MXX50	\$9.50	30	6	$4\frac{1}{4} \times 3$
1MXX50	5.80	6	1	$2\frac{3}{4} \times 1\frac{7}{8}$

Used Where Control Circuit and Load are Fed by Different Lines

Type	Each	115 Volts A.C.	115 Volts D.C.	Base Size Inches
8BXX50	\$10.90	15	2	$4\frac{1}{4} \times 3$
1BXX50	6.60	6	1	$2\frac{3}{4} \times 1\frac{7}{8}$

## Struthers-Dunn Relay Sets for Low Voltage Thermostat Control

#### Type RS239

Complete with relay and transformer mounted in sheet metal housing with external binding posts for thermostat connections.

Used with 2-Wire Snap Action Thermostat

Type	Each	115-VOLT A.C. —	
		HP. RATING	Amps.
RS239	\$10.00	$\frac{1}{4}$	6
RS71	14.30	1	30

Used with 3-Wire H-L-C Thermostat

Type	Each	HP. RATING	Amps.
RS240	\$11.10	$\frac{1}{4}$	6
RS73	16.60	1	15

## Struthers-Dunn Telephone Auxiliary Signaling Relays

#### Type 5XXH501W6

Type 4HXX56H3. Relay and condenser in H3 sheet metal, hinged cover housing. Signal remains on as long as circuit is closed.

Each..... \$14.60

Type 4HXX56W6. Same as above type except in W6 cast aluminum housing.

Each..... \$25.90

Type 5XXH501W6. Relay, condenser, and push button in W6 cast aluminum housing, weather-proof. After telephone circuit once energizes relay the signal remains on until relay is released.

Each..... \$35.70

## Struthers-Dunn Mercury Swing Relays

#### Type 22AXX

Contacts enclosed from corrosion, dust, and dirt. Recommended for high inrush loads. Swing type magnetic structure eliminates noise.

Contacts rated 25 amperes, 115 volts a.c.; 20 amperes, 230 volts a.c.; 20 amperes, 115 volts d.c.; 10 amperes, 230 volts d.c.

Type	Description	Each
22AXX	S.P., S.T., Normally Open.....	\$11.50
22XXA	S.P., S.T., Normally Closed.....	11.50
22BXX	D.P., S.T., Normally Open.....	16.10
22XBB	D.P., S.T., Normally Closed.....	16.10

### Type 112XAX Struthers-Dunn Sensitive Relays

Low inertia and balanced moving parts result in high sensitivity, long life, fast operating, and vibration-resistant relays.

Available with interconnected coil and contact circuits for use with thermoregulators.

Sensitivity, 0.015 watts, d.c., 0.19 volt-amperes at 60 cycles.

Single pole, double throw contacts on non-inductive loads rated 2 amperes at 115 volts a.c.; ¼ amperes at 115 volts d.c.

Base size, front connected relays, 2½x2⅜ inches.

Coils wound with wire up to and including 44 gage. Prices vary with wire gage.

Also available with double pole, double throw contacts.

For more complete information, request complete bulletin data.

### Type PSY1 Struthers-Dunn Time Delay Relays

Many types of time delay relays are available including motor driven, both repeating and recycling, thermal, and inertia types.

This motor driven timer consists of a small synchronous motor driving a single cam at one rpm. The contacts close once per minute and the closure time is adjustable from 0 to 30 seconds. Contacts rated 10 amperes at 115 volts, a.c.

Motor for operation on 115 volts, 60 cycles, but may be furnished for other ratings at an increased price.

Size, 3¾x2¼ inches front connected.

Type PSY1.....each \$11.50

### Struthers-Dunn Ratchet Type Sequence Relays

Ratchet type sequence relays move their contacts when the coil is energized and then remain in this position until the coil is de-energized and again energized.

Contacts rated 115 volts, a.c., 20 amperes; 115 volts, d.c., 1 ampere.

Coils approximate 8 watts, a.c.; 4 watts, d.c.

Base size, 5x3 inches.

85AXA S.P., D.T., Separate Circuit..... \$18.40

85BXX D.P., S.T..... 18.40

Similar relays, except using midget construction are available at \$11.50.

### Struthers-Dunn Emergency Lamp Relays

Designed to automatically cut in a standby or emergency lamp should the main lamp burn out.

If an auxiliary source of power (such as a storage battery) is available the relays may be connected to switch the emergency lamp into the auxiliary circuit should the main line voltage fail or the main lamp burn out.

The relay is equipped with coils of minimum voltage drop to operate in series with the main lamp, upon the failure of which the relay armature opens, closing a set of contacts and completing the circuit to the standby lamp.

Type 20XXA5

Contacts are fine silver with low resistance which practically eliminates voltage drop at the contacts.

Contacts: 115-230 volts a.c., 800 watts; 115-230 volts d.c., 100 watts.

Base size, 4x2¾ inches front connected.

Type	Description	Each
20XXA5	S.P., S.T., S.B.....	\$6.30
20XXH5	S.P., S.T., D.B.....	6.30

### Edwards General Purpose Relays

Schedule C

Made in two sizes with magnets, bases, contacts, etc., proportioned according to use.

All even numbers are the senior relays, approximately 3 inches wide, 5 inches high and 3 inches deep.

All odd numbers are junior relays, approximately 2 inches wide, 3 inches high and 2 inches deep.

On a.c., relay will be found free from hum and efficient in operation. The contacts are pure hard drawn silver of the wiping type and liberally proportioned.

When ordering give: Exact operating voltage of coil and whether d.c. or a.c. (give cycles); voltage and current to be connected to contacts and whether inductive such as solenoids, motors, etc., or non-inductive such as lamps, heaters, etc. If there is any question a brief description or sketch of its intended use should be furnished with order.

\*Low voltage relay, approximately 1½ inches wide, 2½ inches high, 1⅜ inches deep. Bronze contacts. Suitable for lamp annunciators, etc.

### Edwards Telephone Relays

For the operation of loud ringing extension bells or horns on any desired voltage. The relay operates on all standard telephone ringing circuits, 70 to 90 volts a.c., 16 to 20 cycles. Supplied complete in metal hinged cover box with condenser.

#### No. 963

Schedule C

For momentary operation as long as telephone ringing circuit is closed. Contact ratings—10 amperes a.c. or 5 amperes d.c. up to 48 volts, 10 amperes a.c. or 3 amperes d.c. up to 130 volts, 5 amperes a.c. or 1 ampere d.c. up to 250 volts.

No. 963.....each \$30.00

#### No. 26-T

Schedule C

For continuous ringing until reset. Contact ratings, 2 amperes a.c. or d.c. up to 48 volts.

No. 26-T.....each \$22.50

### R-B-M Magnetic Relays

Used for control of electric power and lighting loads, pilot lights and audible signals. May also be used as circuit switching relays for machine tools, processing control and electrical interlocking systems, and electronic applications.

Mounting base has two tapped and two punched holes for front and rear mounting.

Wiping contacts are of fine silver.

Relays are thoroughly tested before shipment and are furnished with either solder or screw type terminals. When ordered with general purpose enclosure, relay will have screw terminals only.

Sheet steel general purpose enclosure No. 89000, complete with mounting screws, is used with the relays herein listed.

#### R-B-M Direct Current Single Pole Relays

No. 81523

Approximate dimensions: length,  $2\frac{1}{16}$  inches; width,  $1\frac{1}{16}$  inches; height,  $1\frac{3}{4}$  inches.

Coils furnished as specified:  $1\frac{1}{2}$  to 115 volts d.c.

Contacts: 220 volts a.c., 5 amperes; 110 volts a.c., 10 amperes; 24 volts d.c., 10 amperes. Non-inductive loads.

Weight, 4.3 ounces.

Approximate dimensions: length,  $3\frac{1}{32}$  inches; width,  $2\frac{1}{4}$  inches; height,  $2\frac{3}{4}$  inches.

Coils furnished as specified:  $1\frac{1}{2}$  to 220 volts, 50-60 cycle a.c.

Contacts: 220 volts a.c., 15 amperes; 110 volts a.c., 30 amperes. Non-inductive loads.

Maximum motor load,  $1\frac{1}{2}$

## R-B-M Magnetic Relays

### Electronic and Communication Midget Relays

No. 98211

Used in electronic and communication industries.

Ideally suited for automatic scales, counting devices, business machines, electric clock systems, resistance welder controls, traffic control systems, or any other applications requiring sensitive relays of a compact design.

Has high-speed, long life operation.

#### Midget Shunt-Type

Available in the above d.c. or a.c. coil ratings.

Contacts are rated 24 volts a.c., 10 amperes; 24 volts d.c., 10 amperes; and 110 volts a.c., 10 amperes.

Non-inductive load.

#### Direct Current Shunt-Type Relays

Available in 1 to 6 poles, double throw.

Coils furnished as specified: 1½ to 115 volts d.c.

Contacts: 32 volts d.c., 3 amperes or 110 volts a.c., 1 ampere Non-inductive load.

#### Direct Current Series-Type Relays

Available in 1 to 6 poles, double throw.

Coils available in maximum of 115 volts d.c. across the coil. Maximum resistance at 20°C., depending on type, of from 8500 to 12,000 ohms, except for the plug-in type which has maximum resistance of 10,000 ohms.

All contact available in normally open, normally closed, or double throw. Double throw contacts available in "break before make" or "make before break".

#### Alternating Current Shunt-Type Relays

Available in 1 to 4 poles, double throw.

Coils furnished as specified: 1½ to 220 volts a.c.

Contacts: 24 volts a.c., 3 amperes or 110 volts a.c., 1 ampere Non-inductive load.

For full information write for Bulletin 560.

## R-B-M General Purpose Magnetic Relays

Alternating Current

Direct Current

Designed for commercial phonographs, vending machines, commercial radio equipment, and electronic apparatus.

Relays listed as suitable for Underwriters' approval for 115-volt a.c. application, when submitted as part of manufacturers equipment, have individual contact pile-up with wide insulators providing adequate clearance to ground for 150 volts or less. Relays designed in accordance with Underwriters' specifications for (Class C) small electrical devices have molded phenolic stack insulators.

Overall dimensions: width, 1½-inch; length, 2½ inches; height, 1¾ to 2¼ inches depending on contact arrangement.

### R-B-M Direct Current Relays

3 Amperes, 32 Volts A.C.—1 Ampere, 32 Volts D.C.

Fine silver cross bar contacts welded to phosphor bronze springs. Coils furnished as specified: 1½ to 115 volts d.c.

Contacts: 3 amperes, 32 volts a.c. or less; 1 ampere, 32 volts d.c. or less. Non-inductive loads.

12 Amperes, 115 Volts A.C.—6 Amperes, 32 Volts D.C.

Fine silver button contacts welded to beryllium copper springs. Coils furnished as specified: 1½ to 115 volts d.c.

Contacts: 12 amperes, 115 volts a.c. or less; 6 amperes 32 volts d.c. or less. Non-inductive loads.

### R-B-M Alternating Current Relays

3 Amperes, 32 Volts A.C.—1 Ampere, 32 Volts D.C.

Fine silver cross-bar contacts welded to phosphor bronze springs. Coils furnished as specified: 1½ to 230 volts, 60 cycles.

Contacts: 3 amperes, 32 volts a.c. or less; 1 ampere, 32 volts d.c. or less. Non-inductive loads.

12 Amperes, 115 Volts A.C.—6 Amperes, 32 Volts D.C.

Fine silver button contacts and beryllium copper springs. Coils furnished as specified: 1½ to 230 volts, 60 cycles.

Contacts: 12 amperes, 115 volts a.c. or less; 6 amperes, 32 volts d.c. or less. Non-inductive loads.

Suitable for Underwriters' approval for 115-volt a.c. application when submitted as part of manufacturer's equipment.

3 AMPERES, 32 VOLTS A.C.				12 AMPERES, 115 VOLTS A.C.				Contact Arrangement

## Benjamin Telecode Relays

Listed by Underwriters' Laboratories

For telephone ringing extension and closed circuit alarm systems in factories, mines, etc., where great volumes of noise make it difficult to hear a telephone bell.

Supplied with contacts arranged for open circuits, contacts open until coil is energized; with contacts arranged for closed circuits, contacts closed until the relay is actuated by current flowing through the coils; and with locking armatures, special winding on coils locks the contacts when the relay is operated, giving continuous operation to signals until circuit is broken by a release switch. Contacts are of tungsten steel; coils are form wound with moisture-proof coverings.

Rated .8 ampere at 110 volts. Standard coil windings, 1000 ohms for operation on 110-v., 60-cy., a.c. or 18 volt d.c. circuits.

Battleship gray enamel finish.

When ordering, specify resistance of telephone bell ringer coils, or voltage and frequency of ringing circuit.

### For Panel Mounting

#### Less Condenser

For direct panel mounting; also used as the basis of all combinations listed below.

Has a bakelite base,  $4\frac{1}{2}$  inches in diameter, with two mounting screw holes spaced on  $3\frac{1}{2}$ -inch centers.

Shipping weight,  $2\frac{1}{2}$  pounds.

No.	Description	Each
8313-P	Open Circuit.....	\$15.00
8313-C	Closed Circuit.....	15.00
8313-L	Locking Armature.....	16.90

### With Pressed Steel Box

For general use indoors. Steel box with hinged cover;  $6\frac{1}{2} \times 3$  inches. With  $\frac{1}{2}$ -inch knockouts on all four sides.

#### Less Condenser

Shipping weight  $5\frac{1}{4}$  pounds.

No.	Description	Each
8315-P	Open Circuit..	\$15.00
8315-C	Closed Circuit	15.00
8315-L	Locking	

Armature... 16.90

#### \*With Condenser

Shipping weight, 6 pounds.

8316-P	Open Circuit..	\$20.00
8316-L	Locking	

Armature... 21.90

### With Explosion Proof Box

Has a cast iron base, threaded to take a cast red brass cover. Joint between cover and base of box is close fitting, deep flanged and of sufficient depth to prevent the escape of flames to the surrounding atmosphere.

Base has two mounting lugs and two hubs with conduit stops.

Main section is  $5\frac{1}{2}$  inches in diameter and tapped  $\frac{1}{2}$ -inch straight through standard; tapped  $\frac{3}{4}$ -inch, when specified.

## Mossman Switches

### Basic Contact Forms

Form A  
Single Pole Make

Form B  
Single Pole Break

Form C  
Single Pole Double Throw

Form C°  
Single Pole Double Throw Open Neutral

Form D  
Make Before Break

Form E  
Break-Make-Break

Basic contact forms are illustrated. Indicate by letter the contact forms desired. Any combination can be obtained.

Form C° indicates a neutral or open position of the actuating spring on a Form C assembly in a three-position switch. Contact assemblies of 12 springs per pile-up, 24 springs per position, or 48 springs total can be built into the switch. Special pile-up arrangements can be made.

### Contact Ratings

**Standard Heavy Duty Contacts:** diameter,  $\frac{3}{16}$ -inch; fine silver; 10 amperes, 110 volts a.c.; non-inductive.

**Extra Heavy Duty Contacts:** diameter,  $\frac{3}{16}$ -inch; silver alloy; 20 amperes, 110 volts a.c.; non-inductive.

Contacts are spun into plated phosphor bronze springs. Other contact materials are available for special applications.

### Inverted Contact Forms

Used in order to balance the action of a switch and secure smoother operation. This is done by placing the "make or break" spring on the opposite side of armature spring to that of its normal position, so as to function when the switch is thrown on the opposite (to normal Form) position.

It is also possible to use the inverted Form B and C but not C°, which is applicable only to a three-position switch and may be placed in either position 1 or 2.

## Mossman Series 4101 Heavy Duty Lever Switches

A multiple circuit, positive action lever switch. A three-position switch with locking action in the center or neutral position and locking or non-locking in the other two positions, or any

combination of this as required.

The use of a no-throw stop in either of the two active positions converts it into a two-position switch.

**Applications:** radio transmitters, signal systems, welding equipment, electronic devices and controls, lighting systems, machine tool controls, airport lighting and signalling, x-ray controls, fire alarm systems, annunciators, industrial control units, instruments, motor controls, aircraft electrical controls, and marine signalling systems.

**Mechanical Construction:** chassis consists of a heavy brass frame rigidly braced; frame supports a chromium-plated latch plate and spring-actuated piston, in which a roller is mounted clevis fashion; axles, stop-pins, and piston are of stainless steel; equipped with black phenolic handle; knurled metal handle also available; terminals are tinned for soldering.

**Insulators:** breakdown rating, 2000 volts a.c.; spring pile-up insulators are of Bakelite wafers, assembled under pressure to avoid distortion. Insulation may be had treated with standard moisture resisting varnishes of fungicide treatments if specified.

## Mossman Series 4200 Lever Switches

Constructed to meet the need for a multiple circuit, positive action lever switch.

A three position switch with locking action in the center or neutral position and locking or non-locking in the other two positions or any combination of this as required.

The use of a no-throw stop in either of the two active positions converts it into a two-position switch.

**Mechanical Construction:** frame is either zinc or aluminum die casting; latch plate is of chrome-plated, half-hard brass with thread stem, on which plastic handle is secured; detent mechanism consists of a stainless steel spring, which exerts pressure against two free-rolling, stainless steel balls located in a nickel-plated brass tube, inserted and staked in the tunnel of the switch frame; terminals are tinned for soldering.

**Insulation:** breakdown rating of springs to ground, 1000 volts a.c.; spring pile-up insulators are Bakelite wafers, assembled under pressure to insure against distortion. Fungicide treated insulation available if specified.

**Applications:** communication systems; fire alarm systems; testing apparatus; instruments; annunciator systems; radio equipment; industrial devices; and signal systems.

## Mossman Series 6300 Heavy Duty Turn Switches

Meets the need for heavy duty, multiple circuit, positive action turn switches.

A three-position switch with locking action in the center or neutral position and locking or non-locking in the other two positions or any combination of this as required.

The use of a no-throw stop in either of the two active positions converts it into a two-position switch.

**Applications:** radio transmitters; electronic devices and controls; airport lighting and signalling; radar units; annunciators; television transmitters; marine signalling systems; and industrial control units.

**Mechanical Construction:** chassis consists of a heavy brass frame, rigidly braced which supports a chromium-plated latch-plate and spring-actuated piston in which a roller is mounted clevis fashion; axle, stop-pins, and piston are of stainless steel;  $\frac{3}{8}$ -inch diameter, 32-thread nickel-plated brass bushing provides the bearing for the shaft; terminals are tinned for soldering; handle is made of Bakelite.

**Insulation:** breakdown rating, 2000 volts a.c.; spring pile-up insulators are of Bakelite wafers, assembled under pressure to insure against distortion. Fungicide treated insulation available if specified.

## Mossman Series 4500 Heavy Duty Lever Switches

Meets requirements for a multiple position, multiple circuit, positive action lever switch. Referred to as the gear shift switch because of its method of selecting positions.

Available as a five-position (Series 4505) or a four-position (Series 4504) switch.

In all positions, except center, (neutral) the action may be locking or non-locking. In center (neutral) position it is always locking.

**Applications:** motor starting, stopping, reversing, and speed control; hoist and crane control; equalization of multi-generator operation; public address systems; television transmitters; electronic devices and controls; marine signalling systems; electric ovens and furnaces; industrial control units; and lighting systems.

**Safety Selective Switching:** may take the place of four switches where selectivity is required. Prevents the danger of throwing more than one switch at a time.

**Emergency Transfer of Spare Equipment:** in which case a special locking feature prevents the use of the switch without breaking a seal.

**Mechanical Construction:** equipped with two chromium-plated latch-plates, and two spring-actuated stainless steel pistons with clevis mounted roller in each piston to form the latch; plastic handle is fastened to the stem of the actuating mechanism with a set-screw; removable stop plates make it easy to incorporate the locking or non-locking action; slot in escutcheon plate is H-shaped and the action of the switch is similar to the gear shifting action of a standard automobile gear shift; a special escutcheon plate assembly makes it possible to seal the switch in any desired active position.

**Insulation:** breakdown rating, 2000 volts a.c.; contact spring pile-up insulators are Bakelite wafers; pile-up screws are insulated by tubing; assembled under pressure to avoid distortion.

## Ordering Contact Assemblies

When ordering specify:

**Action of Switch:** locking, non-locking, no-throw, and in what position action is required.

**Contact Forms and Location in Position:** whether Position 1 or Position 2; Series 4500, whether five positions (4505) or four positions (4504) are required.

**Contact Ratings:** whether standard heavy duty or extra heavy duty.

**Type of Mounting:** for Series 6300, regular or moisture-proof and thickness of panel.

**Handle:** for Series 4200, phenolic (black, red, or white); for Series 4101, phenolic (black, red, or white) or knurled metal.

## No. 86 Edwards Doorbell Transformers

Primary 115 Volts, 60-140 or 25-50 Cycles; 230 Volts, 60-140 Cycles  
Secondary 10 Volts, 5 Watts

## Schedule S

Has mounting feet so transformers may be used without outlet box in districts where such box is not required. May be inserted in either round or square plates and mounted on outlet boxes. Steel clad.

Underwriters' Listed.  
Black finish.

No. 230-111

## Jefferson Tri-Volt Bell Ringing Transformers

For 115 volts a.c. Generates 3 secondary voltages: 6, 12 and 18 and will take care of longer leads than Wizard or Nucode.

Capacity, 5 watts; dimensions 2x2 1/2 x 3 3/4 inches. Weight 1 1/2 pounds.

No. 230-121, for 50-60 Cycles.... each \$1.80  
No. 230-122, for 25-40 Cycles.... each 3.25

## Jefferson Standard Signaling Transformers

115 Volts, A.C.

Designed to operate all types of a.c. bells, horns, and other signaling systems including relays, lamps, annunciators, etc. Core and windings are hermetically sealed in a heavy metal case for protection against

moisture. Wiring compartments are provided for both primary and secondary connections.

All transformers have 4, 8, 12, 16, 20 and 24 volt secondary voltages.

Listed as standard by Underwriters' Laboratories, Inc.

Max. Sec.

For 230-volt transformers, add 15 per cent to above prices.

Transformers with primary circuit breaker; prices upon application.

**No. 230-131 Jefferson Porcelain-Klad Transformers****115 Volts, 50-60 Cycles**

Operates door bells, buzzers, annunciators and door openers in the average residence or small apartment building.

Porcelain covered transformer with a metal base for easy installation without the danger of breaking or chipping the case. Impervious to moisture or chemical fumes.

Size case,  $3\frac{1}{8} \times 3\frac{1}{8} \times 1\frac{7}{8}$  inches.

Secondary, 10 volts. Capacity, 5 watts.

Listed as standard by Underwriters' Laboratories, Inc.

Not made for 230-volt or 25-40 cycles.

Weight,  $1\frac{3}{4}$  pounds.

No. 230-131.....each \$2.00

**Jefferson Low Voltage Transformers****115 Volts, 50-133 Cycles, A.C.**

Approved by Underwriters' Laboratories, Inc.

Designed for service wherever low voltage a.c. current is necessary, such as the operation of electrically controlled valves, thermostats, magnetic relays, etc.

Coils are layer built, automatically wound, have triple insulation, are vacuum treated, impregnated and baked.

The highest quality of silicon steel in shell design is used in this line of transformers. The core is locked against hum by varnish treatment and baking, and is securely clamped by the pressed-steel housings.

Heavy drawn steel sidings form the case of the control transformers. These sidings securely clamp the core and completely enclose the primary and secondary windings, shielding them from damage through rough handling. These sidings also form a base which has holes for convenient mounting.

Circuit breaker consists of a heavy bi-metallic member having a nichrome resistance element and phosphor bronze springs with large silver contacts. Parts are mounted on bakelite insulation and the re-set button is also of bakelite.

**Jefferson Oil Burner Ignition Transformers****115 Volts, 60 Cycles, A.C.**

Nos. 638-171, 638-251,  
638-261 and 638-271

No. 638-281

The introduction of various types of burners has required the development of different types of transformers. This is a transformer for every specific application—5000, 10000, 12000 and 15000-volt ratings; for intermittent and continuous service; grounded, mid-point grounded, balanced mid-point grounded, and insulated secondaries; and in core and shell type designs.

The cool operation is accomplished by exacting requirements, liberal design throughout, plus the use of quality materials of adequate size which results in long transformer life.

Equipped with built-in radio barrier to eliminate the possibility of objectionable radio interference.

Nos. 638-171, 638-251, 638-261 and 638-271 are assembled in the new streamlined case. This case is of heavy drawn steel of exceptional durability, treated to resist rust and finished in a high lustre long-wearing black enamel. All other types are assembled in similarly rugged and attractive cases of standard design. Universal mounting brackets of sturdy design are provided.

A junction box of liberal proportions is built into the top of the case. Knockouts are provided in two sides and in the end of the case for convenient entrance. Quick and easy splicing results and there is ample space for additional wiring which any installation may require. Primary leads 24 inches long are standard on all types.

**Intermittent Duty Types****Grounded**

No.	Each	Cap V.A.	SECONDARY Volts	MA.	Type of Core	Max. Gap Setting Inches	No. of Weight Sec. Pounds

\*Not equipped with radio filter.

These transformers are obtainable in other voltages and frequencies at extra cost. Prices upon application.

## Jefferson Luminous Tube Sign Transformers

Nos. 721-111 and 721-121

Designed for use in all types of portable or fixed, indoor or outdoor neon signs. Complete assortment of models provides a transformer to meet the most exacting requirements, both as to electrical and mechanical details.

Mid-point grounded, balanced design, patented construction, and many other improvements insure perfect secondary current regulation regardless of length of tubing operated, high efficiency permitting long tube length, cool operation, quietness, long life, neat appearance, and lightness in weight.

Case in which transformer is assembled is made of extra heavy rust-resisting steel, flanged construction and with substantial brackets, insuring rugged construction. Binding posts and nuts are cadmium-plated to guard against corrosion. Case is black enameled, baked thoroughly to present a tough and durable finish.

## Jefferson Indoor Luminous Tube Sign Transformers

115 Volts, 60 Cycles

Type 726 with Hanging Bracket

Designed to meet the requirements of the National Electric Code and Underwriters' Laboratories, Inc. The compactness of the streamlined case and the convenient end compartments make this line adaptable to every type of indoor luminous sign.

Two groups of transformers are available—Series No. 728 having secondary spring contact electrode housings, and Series No. 726 with secondary cables. Transformers in either series are furnished with or without 3-conductor cord and 2-prong plug with means for grounding and primary pull switch.

There are no exposed live metal parts in the high tension secondary circuit. Primary connections are screw terminals, panel-mounted, inside the end compartment. No soldering is required. Removal of end caps exposes the wiring compartments for easy and quick wiring. A combination knock-out and bushing in top of case provides for primary current entry through cord and plug, or through flexible or rigid conduit.

Hanging brackets, which prevent swinging movement of transformer and tubing, are furnished as standard equipment. Mounting supports for Series No. 728 are also available when it is desired to use the transformer and tubing in standing position.

Furnished in gray finish, hammered metal in appearance.

## With Electrode Housings

No.	Each	Cap. V.A.	SECONDARY Volts	MA.	Length	Width	Height	Approx. Ship. Weight Pounds

728-351	16.20	150	7500	18	15 $\frac{1}{2}$	3 $\frac{3}{16}$	6	15
728-161	17.50	150	5000	30	15 $\frac{1}{2}$	3 $\frac{3}{16}$	6	15
728-361	14.00	100	5000	18	15 $\frac{1}{2}$	3 $\frac{3}{16}$	6	14

## With 3-Foot Secondary Cables

No.	Each	Cap. V.A.	SECONDARY Volts	MA.	Length	Width	Height	Approx. Ship. Weight Pounds
726-141	\$19.00	250	9000	30	15 $\frac{1}{2}$	3 $\frac{3}{16}$	6	31
726-341	17.60	190	9000	18	15 $\frac{1}{2}$	3 $\frac{3}{16}$	6	19
726-151	18.90	225	7500	30	15 $\frac{1}{2}$	3 $\frac{3}{16}$	6	18
726-351	16.20	150	7500	18	15 $\frac{1}{2}$	3 $\frac{3}{16}$	6	15
726-161	15.70	150	5000	30	15 $\frac{1}{2}$	3 $\frac{3}{16}$	6	15
726-361	14.00	100	5000	18	15 $\frac{1}{2}$	3 $\frac{3}{16}$	6	14

## With Electrode Housings

No.	Each	Cap. V.A.	SECONDARY Volts	MA.	Length	Width	Height	Approx. Ship. Weight Pounds
728-111	\$22.30	450	15000	30	16 $\frac{1}{2}$	6 $\frac{1}{16}$	7 $\frac{5}{16}$	34 $\frac{1}{2}$
728-121	21.00	360	12000	30	16 $\frac{1}{2}$	6 $\frac{1}{16}$	7 $\frac{5}{16}$	34 $\frac{1}{2}$

## With 3-Foot Secondary Cables

No.	Each	Cap. V.A.	SECONDARY Volts	MA.	Length	Width	Height	Approx. Ship. Weight Pounds
726-111	\$22.30	450	15000	30	16 $\frac{1}{2}$	6 $\frac{1}{16}$	7 $\frac{5}{16}$	33
726-121	21.00	360	12000	30	16 $\frac{1}{2}$	6 $\frac{1}{16}$	7 $\frac{5}{16}$	33

Series No. 728 may be used as hanging or standing type—standing brackets No. 728-001 supplied at slight additional cost. Series No. 726 is for hanging only, with eyelet supports for glass tubing.

For transformers of High Power-Factor type, add numeral "4" to catalog number—example: 728-4111 for 15000 volt 30 M.A. type.

Transformers for operation on 50 cycle source available in full range of types.  
Unenclosed type transformers can be furnished on application.

## G-E Autotransformers for High-Intensity Type H Mercury Lamps

The successful operation of high-intensity Type H mercury lamps depends on a transformer that must give proper starting and running characteristics, and must be a dependable source of power. As a result of close co-operation of transformer design and lamp design, General Electric has developed lines of autotransformers that assure matched performance with the lamps and most efficient operation.

### Enclosed Tulamp Autotransformers

Fig. 1, Enclosed Tulamp Autotransformer

Enclosed Tulamp transformers are provided for the H1 and the H5 lamps. Tulamp transformers make use of the split-phase principle in which one lamp is ballasted by reactance only and the other lamp is ballasted by reactance and capacitance in series. The lagging power factor of the reactance branch offsets the leading power factor of the capacitance branch, resulting in an overall power factor of above 95 per cent. The phase displacement of currents in the two branches results in a materially reduced stroboscopic effect when the lamps are mounted adjacent to one another in pairs. As only one transformer is required for two lamps, lower first cost and installation cost will result. These transformers are suitable for wall or ceiling mounting. A large junction box with terminal board is part of the housing.

### Enclosed Autotransformers

Fig. 2, Enclosed Autotransformer

Fig. 3, Enclosed Autotransformer for H-9 Lamp

Enclosed single-lamp transformers are listed for the H1, H2, H4, H5, and H9 lamps. These transformers, with the exception of H9 (high-power-factor only), are available in either the high-power-factor design or the normal-power-factor design. In the high-power-factor units, a G-E Pyranol capacitor is included in the housing, increasing the power factor to a minimum value of 90 per cent. These transformers can be mounted on the wall or ceiling, or suspended from conduit. Roomy junction boxes with terminal boards are built into all enclosed transformers.

### Weatherproof Autotransformers

Fig. 4, Weatherproof Autotransformers

Weatherproof transformers are listed for the H1, H2, H4, and H5 lamps. These transformers are designed for outdoor installation, and are built in heavy sheet metal housings with brackets for wall or pole mounting. These transformers have leads for open wiring to the line and lamp circuits. As with the enclosed autotransformers, the weatherproof designs are available either with or without self-contained power-factor improvement by means of a G-E Pyranol capacitor mounted within the housing.

### Core-and-Coil Autotransformer

Fig. 5, Core-and-Coil Autotransformer

Core-and-coil transformers are listed for all except H9 lamps. These are recommended when they are to be built into the lighting fixture or machine by the fixture or equipment manufacturer. The fixture should be ventilated to allow free air circulation around the transformer.

### Voltage Taps

Since the lamp must be operated within rather close voltage limits, taps are provided for satisfactory operation over a wide range of line voltages. The 230-volt ratings have taps at 245, 230, 215, and 200 volts; and the 115-volt ratings have taps at 123, 115, 107, and 100 volts. On the enclosed transformers, tap changing is simplified by means of a jumper lead for connecting to terminals on the terminal board.

### Superior Supro Electrodes For Neon Tubes

Stain-free and crack-free with electrode coating which does not need to be broken down during bombardment and which gives a minimum of snaking with mercury tubes.

Sputtering is minimized and the voltage drop is low.

Equipped with full length Westinghouse dumet leads.

Available in BASED, which consists of a metal cap cemented to the electrode with bakelite cement and having the leads soldered to the cap.

\*Chiefly used for cold cathode lighting.

†Uncoated.

Additional types are available, prices on request.

Stranded wire leads can be furnished at additional cost.

### Supro Lux Fluorescent Tubing

Available in diameters from 8 to 25 millimeters.

Packed, 40 pounds of glass in a carton containing four paper packed bundles of 10 pounds each.

	10 Mm. or Larger	9 Mm.	8 Mm.

#### Standard Fluorescent Lighting Association Colors

**No. 3500 White.** Similar to that used in hot cathode fluorescent lamps. Recommended for general lighting and is the brightest of all the colors.

Per pound..... \$ .75

**Daylight White.** Also similar to that used in hot cathode fluorescent lamps but is not as cold a color. Not recommended for signs.

Per pound..... \$ .75

**Soft White.** White with a reddish cast. Excellent where foods are used or displayed and is flattering to the human complexion. May also be used on signs.

Per pound..... \$ .75

### Knox Porcelain Electrode Bushings

White glaze standard. Other colors upon request.

No.	Description	Panel Opening Inches	Car-ton	Wt., Lb. per 100

3	3003-3	39.55	17

### \*With 1-Inch Screw

No.	Per 1000	Approx. Shipping Wt., Lb. per 100
3000-7	\$35.15	21 1/2
3001-7	36.15	23
3002-7	38.65	26
3003-7	39.90	28 1/2

\*With No. 6 sheet metal screw inserted.  
For tube supports, use any No. 6 sheet metal screw.  
For cable support, use any No. 7 or No. 8 sheet metal screw.  
Available in clear or ivory. When ordering ivory, suffix I to number.

## Airco Rare Gases

For sign tubes and fluorescent illumination lamps.

Pure and free of active gases or undesirable elements.

Pure rare gases increase the operating efficiency of sign tubes by creating lower resistance, which results in more footage per transformer and fewer transformers per sign. Moreover, pure rare gases insure longer life of the completed tube and lower maintenance costs.

Available in a variety of accurate and uniform rare gas mixtures and color combinations.

Furnished in 1 or 2-liter flasks; lead glass or Pyrex.

Individually packed in cardboard container.

Color	Gas	Per Liter	Pressure Mm.	Glass	Coating
Rose Pink	Neon	\$5.00	10-18	Clear	Blue
Gold	*B-10, B-19, W-05	5.00	10-20	Noviol	Yellow
Yellow	Neon	5.00	10-18	Clear	Green
Green	*B-10, B-19, W-05	5.00	10-20	Clear	Green
Blue	*B-10, B-19, W-05	5.00	10-20	Clear	Blue
White	*B-10, B-19, W-05	5.00	10-20	Clear	White

\*Use mercury. Gas B-10 is the standard all-purpose mixture for use with mercury; B-19 will provide maximum protection against fading at low temperature; W-05 is recommended for greatest brilliance where condensation of mercury is not a factor.

Mixtures of neon, argon, and helium are available at \$5.00 per liter. Prices on krypton and xenon or mixtures of these gases will be furnished upon request.

## Reco Color Changing, Speller, or Speed Type Flashers and Controls

For 115 Volt, 60 Cycle, A.C. Only

Silver Contact

### Color Changing or Speller Type.

For two or more colors. Speller type flasher. Two to four actions. Speed, 6 to 8 rpm.

**Speed Type.** For traveling borders, revolving wheels, flames. Cam shaft speeds, standard 36 to 46 rpm. with 5-lobe cams, makes flashing speed 180 to 230 flashes per minute.

When ordering state voltage and cycles of current. Also specify flashing action, timing, circuit loads, watts or volt-amperes.

### Color Changing or Speller Type

No.	No. of Circuits	Capacity per Circuit	Size Inches	Weight Pounds
FDBO-2	2	660W. or Va.	7x8x3 1/2	8
FDBO-3	3	660W. or Va.	7x8x3 1/2	8
FDBO-4	4	660W. or Va.	7x8x3 1/2	8
LDBO-2	2	1650W. or Va.	7x8x3 1/2	8
LDBO-3	3	1650W. or Va.	7x8x3 1/2	8
LDBO-4	4	1650W. or Va.	7x8x3 1/2	8
FDBS-4	4	660W. or Va.	7x8x3 1/2	8
LDBS-4	4	1650W. or Va.	7x8x3 1/2	8

### Reco Off and On, and Alternate Type Flashers and Controls

For 115 Volt, 60 Cycles, A.C. Only  
Silver Contact

**On and Off Type**

**Alternate Type**

Order a single circuit for on and off type, two circuits for alternate type. Flashing cycles, 12 to 16 rpm.

No.	No. of Circuits	Capacity per Circuit	Size Inches	Weight Pounds
FDSB01	1	660W. or Va.	4 1/2 x 4 1/2 x 5 1/2	6 1/2
LDSB01	1	1650W. or Va.	4 1/2 x 4 1/2 x 5 1/2	6 1/2
FDSB02	2	660W. or Va.	4 1/2 x 7 1/2 x 5 1/2	8
LDSB02	2	1650W. or Va.	4 1/2 x 7 1/2 x 5 1/2	8

When ordering state voltage and cycles of current. Also specify flashing action, timing, circuit loads, watts or volt-amperes.

### Reco Thermatic Type Flashers and Controls

For 115 Volt, 60 Cycle, A.C. Only

A motorless flasher for flashing signs or displays on and off or alternate.

Speed, 15 to 20 fpm.

Loads can be the same or unequal.

Adjustment provided for slightly regulating on and off period.

When ordering specify voltage and cycles of current; also flashing action, timing, circuit loads, watts or volt-amperes.

No.	Watts per Circuit	No. of Circuits	Size Inches	Weight Pounds
BTO-1	660	1 On and Off	6 x 4 1/2 x 3	1 1/4
BTO-2	660	2 Alternate	6 x 4 1/2 x 3	1 1/4
BTO-2A	660	2 On and Off	6 x 4 1/2 x 3	1 1/4
BTO-4	660	4 Two Alternate	6 x 4 1/2 x 3	1 1/4

### Reco Neonimater Flashers and Controls

For 115 Volt, 60 Cycle A.C. Only

Flashes the secondary or high voltage side of neon transformers. Flashing action is obtained by switching or transferring the current from one circuit to another without open circuiting the transformer secondary circuit.

Every outer terminal must be connected.

Maximum, 30 ma., 7500 to 15000 volts.

One Neonimater can be used with only one transformer.

From 2 to 8 flashes can be obtained per rotor revolution.

Flashing speeds from 12 to 1040 fpm.

(viz. 130x8 equals 1040 fpm.) obtained by connecting terminals to different arrangements with different rotor speeds.

When ordering specify voltage and cycles of current; also flashing action, timing, circuit loads, watts or volt-amperes.

No.	No. of Circuits	Rotor RPM.	Size Inches	Weight Pounds
D-6	6	130-300	5 x 9 1/2 x 7	9
G-6A	6	6-8	5 x 9 1/2 x 7	9
G-6B	6	12-16	5 x 9 1/2 x 7	9
G-6C	6	25-60	5 x 9 1/2 x 7	9
D-8	8	120-300	5 x 9 1/2 x 7	9
G-8A	8	6-8	5 x 9 1/2 x 7	9
G-8B	8	12-16	5 x 9 1/2 x 7	9
G-8C	8	25-60	5 x 9 1/2 x 7	9

### Reco On and Off or Color Changing Type Flashers and Controls

Brush and Drum Design

For 110 Volt, A.C. and D.C.

On and off, alternate sides, two or more colors.

For lighting effects, signals, motor control, etc. Recommended where circuits are to be overlapped. Standard cycle, 6 rpm.; also from 3 to 7 rpm.

When ordering specify kind of current, a.c. or d.c., voltage, cycle, 2 or 3-wire service, timing, watts per circuit; include rough sketch if possible.

No.	No. of Brushes	Capacity per Circuit	Size Inches	Shipping Weight Pounds
GO1	1	400W. or Va.	18x13x11	50
GO2	2	400W. or Va.	18x13x11	55
GO3	3	400W. or Va.	18x13x11	60
GO4	4	400W. or Va.	18x13x11	65
LO1	1	800W. or Va.	18x13x11	50
LO2	2	800W. or Va.	18x13x11	55
LO3	3	800W. or Va.	21x13x11	60
LO4	4	800W. or Va.	21x13x11	68

### Reco Speller Type Flashers and Controls

Brush and Drum Design

For 110 Volt, A.C. and D.C.

Flashes letter after letter, word after word; building up and down; progressive borders, motions, etc.

Standard speller action: one circuit on, after another until all are on,

then all out, all on, all out, and repeat.

When ordering, specify in detail flashing effect desired, kind of current, a.c. or d.c., voltage, cycle, 2 or 3-wire service, timing, watts per circuit; include rough sketch if possible.

Standard cycle, 6 rpm.; also from 3 to 7 rpm.

No.	No. of Brushes	Capacity per Circuit	Size Inches	Shipping Weight Pounds
GSP2	2	400W. or Va.	18x13x11	55
GSP3	3	400W. or Va.	18x13x11	60
GSP4	4	400W. or Va.	18x13x11	65
LSP2	2	800W. or Va.	18x13x11	55
LSP3	3	800W. or Va.	21x13x11	60
LSP4	4	800W. or Va.	21x13x11	68

### Reco Speed Type Flashers and Controls

Brush and Drum Design

For 110 Volt, A.C. and D.C.

Reproduces wide range of motion effects; revolving wheels, borders, flames, waterfalls, etc.

Speed effects are usually wired 1-2-3-4 requiring four brushes or in multiples of four circuits.

Standard cycle, 60 rpm.; also as slow as 35 rpm. Flashing speeds from 35 to 480 flashes per minute using from 1 to 8 drum contacts per brush.

Standard 240 fpm. (60 rpm.x4 contacts equals 240 fpm.).

When ordering specify kind of current, a.c. or d.c., voltage, cycle, 2 or 3-wire service, timing, watts per circuit; include rough sketch if possible.

No.	No. of Brushes	Capacity of Circuit	Size Inches	Shipping Weight Pounds
CS4	4	200W. or Va.	18x13x11	55
FS4	4	400W. or Va.	21x13x11	68
KHDS4	4	1000W. or Va.	21x13x11	70

## Time-O-Matic Sign Flashers

For controlling any type of display from simple off and on effect to most spectacular action. Pure silver contacts are used which will not pit or stick, and which will insure long life without replacement. The use of silver contacts allows the flasher to be operated in any position; no leveling or final adjustment is needed after installation. Heat or cold, or short circuits in the sign do not effect the flasher.

Drives are either direct or through spur gear reduction, which assures positive, even action. All steel parts are heavily cadmium plated.

### Model 1 and Model 2 Flashers

50-60 Cycles

Small and compact for installation inside the sign.

Slow speed induction disk motor has a simple speed adjustment. The fast speed is two times greater than the slow speed.

With ball bearings.

Motor draws less than 14 watts.

### Model 1 Off and On or Alternate Flashers

Size,  $4\frac{1}{4} \times 7\frac{1}{2} \times 3\frac{3}{8}$  inches.

Speed adjustment, 12 to 24 flashes per minute. Write for information on special speeds.

Wattage per circuit, 2875.

Amperes per circuit, 25.

No. 2-6144

No.	Each	No. of Circuits	Circuit Timing	Wired Volts	Total Wattage
1-6101	\$27.50	1	Off and On	115	2875
1-6102	35.00	2	Off and On	115-230	5750
1-61A2	31.00	2	Alternate	115-230	5750

### Model 2 High Speed Border Chaser Flashers

Size, four circuits,  $4\frac{1}{4} \times 7\frac{3}{4} \times 3\frac{3}{8}$  inches.

Cabinet size,  $6 \times 9\frac{1}{2} \times 5$  inches.

Speed adjustment, 150 to 450 flashes per minute.

Wattage per circuit, 2875. Amperes per circuit, 25.

2-6133	\$34.00	3	1-3	115-230	8625
2-6136	71.00	6	1-3	115-230	17250
2-6144	35.00	4	1-4	115-230	11500
2-6148	72.00	8	1-4	115-230	23000
2-6166	46.50	6	1-6	115-230	17250

Replacement contacts, \$1.35 per set of two.

### Direct Current Flashers

Standard a.c. flashers can be used on direct current where alternating current is available for the motor. Condensers of the proper size and type must be connected to the contacts for proper operation. Where a.c. is not available for the motor, flashers can be furnished driven by a d.c. motor. Write for prices.

### Model 4 Speller Flashers

50 or 60 Cycles

Meets any requirement in the control of electric signs.

Each contact is controlled by individual split cams.

With ball bearings.

Contacts are rated at 25 amperes, a.c.

**When ordering:** state number of circuits; load per circuit; flashing cycle or sequence; whether 115 volts, 2-wire or 115-230 volts, 3-wire power supply is available.

Each..... \$47.00

For 25 amperes, add \$8.00 per contact.

### Model 5 High Voltage Neon Flashers

115 Volt, 50-60 Cycles

No. 5-61H6

An adjustable speed, motor driven unit for flashing of neon tube signs on high voltage or secondary side of transformers.

Will handle one 15,000-volt 30 ma. transformer.

Permanent alignment of contacts assured by one-piece porcelain top.

Has pivot type, permanently lubricated bearings, and four, six or eight terminals.

Shipping weight, 5 pounds.

No.	Each	Ter- minals	Circuits	Flashes Per Min.	Size Inches
5-61H4	\$16.00	4	2 or 4	35-300	$5\frac{1}{2} \times 7\frac{3}{8} \times 4\frac{3}{8}$
5-61H6	17.25	6	2, 3 or 6	35-300	$5\frac{1}{2} \times 7\frac{3}{8} \times 4\frac{3}{8}$
5-61B4	20.50	4	2 or 4	5-35	$6\frac{3}{4} \times 4\frac{1}{8} \times 7\frac{3}{8}$

5-61H8	18.50	..	8	35-300	$5\frac{1}{2} \times 7\frac{3}{8} \times 4\frac{3}{8}$
5-61B8	23.00	..	8	5-35	$6\frac{3}{4} \times 4\frac{1}{8} \times 7\frac{3}{8}$
5-61H10	30.00	..	10	35-300	.....
5-61B10	35.00	..	10	5-35	.....

For extra circuits, add \$.45 to prices per circuit.

### Model 3 Off, On, and Alternate Flashers

115, 115-230 Volts, 15 Amperes, 50-60 Cycles, A.C.

No. 3-6101,  
Off, On, and Alternate

Size: 1 and 2 circuits,  $5\frac{5}{8} \times 4\frac{3}{8} \times 2\frac{1}{4}$  inches except 3-6102J and 3-61A2J; 3 and 4 circuits,  $5 \times 6\frac{1}{2} \times 4\frac{3}{4}$  inches. Pivot type, lubricated bearings.

Speed of flash, 15 to 30 flashes per minute.

Standard cams are set for 50-50 operation.

Watts per circuit, 1725.

The 115-volt has 115-volt motor and is suitable for 115-volt 2-wire line; 115-230-volt has 115-volt motor but is suitable for 115-230-volt 3-wire line.

### Model 3 High Speed Border Chaser Flashers

115-230 Volts, 10 Amperes, 50-60 Cycles, A.C.

Size:  $5 \times 6\frac{1}{2} \times 4\frac{3}{4}$  inches.

Speed of flash, 250 per minute.

Watts per circuit, 1150. Circuit timing, 1-3 and 1-4.

### Model 3 Type T Speller Flashers

115, 115-230 Volts, 15 Amperes, 50-60 Cycles, A.C.

Handles from 1 to 4 contacts at speeds adjustable from 2 to 10 seconds per cycle with faster speeds by cutting two or more complete operations on the cams.

Size: 1 and 2 circuits,  $5\frac{5}{8} \times 4\frac{3}{8} \times 2\frac{1}{4}$  inches except 3-61T2J; 3 and 4 circuits,  $5 \times 6\frac{1}{2} \times 4\frac{3}{4}$  inches.

Watts per circuit, 1725.

### Model 3 Type S Speller Flashers

115, 115-230 Volts, 15 Amperes, 50-60 Cycles, A.C.

For a large number of contacts or for slow speeds.

Speed: three ranges of speed adjustment are available; 2-10 seconds; 4-20 seconds; 8-40 seconds. State which is desired when ordering. These ranges are approximate and may vary, particularly on the larger flashers.

Available in any number of circuits.

Watts per circuit, 1725.

All Prices Quoted Are Without Cabinets

### Lennan Rub-R-Lite Flashlights Focusing Type

No. 200

A completely rubber-cushioned flashlight that is water-proof and shockproof. Insulated against electrical charges. Batteries and bulb can be replaced in a few seconds.

Has two-button positive action switch; focusing device to adjust the spot for long or short range; bright aluminum reflector; all-steel inner case; and a plastic lens.

**No. 200**, two-cell, focusing, complete with No. 14 bulb but without batteries; packed 48 per shipping case; weight, 33 pounds..... each **\$1.85**

**No. 250**, three-cell, focusing, complete with No. 13 bulb but without batteries; packed 36 per shipping case; weight, 29 pounds..... each **\$2.20**

### No. 17S Justrite Safety Service Flashlights

Approved by Underwriters' Laboratories, U.S. Bureau of Mines, Bureau of Marine Inspection.

Uses 3 regular flashlight cells.

Case is made of plastic reinforced with metal inserts to prevent warping or shrinkage.

Stands on base.

Furnished with a belt clip and a 2½-inch polished reflector.

Height, 5¾ inches.

Weight, ½ pound.

No. 17S, Clear Lens, less Batteries.....	each	\$3.85
No. 1717SH, Honeycomb Lens, less Batteries.....	each	4.00

### No. 2251 Eveready Automatic Spotlights

Two-cell automatic spotlight. Seambrass tube, chromium finish with rolled-on black decoration. Uses

two Eveready No. 950 batteries and pre-focused lamp No. PR-2. Size 6¾x1¼ inches.

No. 2251, Less Batteries.....	each	\$1.35
-------------------------------	------	--------

### No. 210 Eveready Penlights

A seamless chromium brass tube pocket flashlight, used by mechanics, doctors and dentists. Size: 5½x5⅞ inches.

Uses two No. 915 Eveready batteries and No. 222 Eveready Lamp.

No. 210, Less Batteries.....	each	\$6.4
------------------------------	------	-------

## Justrite All-Purpose Safety Hand Lanterns

No. 44S

**No. 44S** is approved by Underwriters' Laboratories, Bureau of Mines and Bureau of Marine Inspection. Uses standard 6-volt battery. Has two bulbs to give either spot or diffused light, and a movable handle. Tilts on base to any angle. Furnished with 3½-inch chrome reflector and glass globe, and globe (lens) guard.

**No. 42S** has the same features as No. 44S except does not have inner guard for globe (lens).

Battery is not included in prices.

No. 44S, Weight, 3 Pounds.....each \$6.60

No. 42S, Weight, 2¾ Pounds.....each 6.00

### Justrite Railroad Trainman's Lanterns

**No. 40** uses standard 6-volt battery and bulbs. One bulb is used for spot beam, other bulb extended for ordinary signals. Has reinforced aluminum tubing handle, welded steel guard, and space for two spare bulbs. Furnished with 3½-inch chrome reflector. Weight, 2 pounds.

**No. 40W** has same features as No. 40 except with glass globe over reflector and no bulb extension feature.

**No. 40, Without Battery, less Bulbs.....each \$4.00**

**No. 40W, Without Battery, less Bulbs.....each 4.60**

### No. 2171 Justrite Flagman's Red Lanterns

A warning beam, visible in all directions.

Has welded wide-base guard and a movable aluminum handle.

Uses standard lantern battery.

Furnished with 3-inch fresnel globe for two bulbs. Emergency bulb mounted in lantern. Space for two spare bulbs.

Weight, 3½ pounds.

**No. 2171-JR, Without Battery, less Bulbs.....each \$6.00**

### Justrite Flexible-Light Lanterns

Used as headlight, or with light housing on wrist, leg, shoulder strap, or belt. Leaves both hands free.

Uses standard lantern battery.

Battery case is carried on shoulder strap and waist belt. Rubber connecting cord.

Weight, 2 pounds.

**No. 1955, With Spot Lens, less Battery.....each \$8.00**

**No. 19H55, With Honeycomb Lens, less Battery.....each 8.20**

### Justrite Inspector's Lanterns

No. 2121

**No. 2121** gives wide spread-beam from honeycomb lens, and separate light housing gives spot beam. Uses standard bulb and battery. Tilts on base to any angle. Furnished with two 2½-inch reflectors, interchangeable lens, and separate individual switches. Weight, 2¼ pounds.

**No. 2111** has same features as No. 2121 except only one light housing using honeycomb spreadbeam lens. Weight, 2 pounds.

**No. 2121, less Battery.....each \$7.00**

**No. 2111, less Battery.....each 6.00**

### No. 42W Justrite Twin-Bulb Hand Lantern

Has two bulbs to give either powerful spot beam and direct light to all sides. Alternate bulb gives brighter beam.

Uses standard lantern battery.

Furnished with 3½-inch chrome reflector; movable, aluminum tubing handle; and glass globe to cover reflector and bulb.

Tilts to any angle on guard-base.

Weight, 2½ pounds.

**No. 42W, less Battery.....each \$5.50**

### Justrite Utility Lanterns

**No. 2101.** Light housing turns any direction horizontally or vertically.

Has spread-beam honeycomb lens, 2½-inch reflector, and folding handles. Uses standard lantern battery.

Also furnished with plain lens for "spot" light.

Height, 7¾ inches.

Weight, 1¼ pounds.

**No. 2107** has same features as No. 2101 except bracket for belt instead of handle. Furnished with adjustable belt.

**No. 2101, less Battery....each \$5.00**

**No. 2107, less Battery....each 6.00**

### No. 1904 Justrite Headlight-Lanterns 4-Cell Type

Has powerful spot beam. Uses 4 flashlight cells. Headpiece straps around cap. Battery case clips on belt. Furnished with 2½-inch polished reflector, 5-volt bulb and spare bulb.

Weight, 1 pound.

**No. 1904, less Battery.....each \$5.00**

## Edison Primary Batteries

Edison Primary Batteries are applicable anywhere; require no battery charging facilities; deliver rated ampere-hour capacities continuously or intermittently at satisfactory voltage; do not lose capacity on open circuit even over long periods; have very low and constant internal resistance; give accurate visual indications of approaching and complete exhaustion; do not freeze; require no attention or maintenance excepting occasional visual inspections between renewals; are easily installed and renewed without expert help.

For either direct operation or as standby batteries where continuous d.c. power supply is extremely important. Standard types adequately and economically meet the low voltage power requirements for: Police, fire and burglar alarms; annunciator systems; elevator signals; stationary engine ignition; industrial, school and scientific laboratory services; marine beacons on fixed structures; program and time clock systems; mine signaling and communication; commercial and railroad telephone services (talking and ringing circuits, operators' transmitters on magneto switchboards, interrupters); telegraph main line and local sounder circuits.

**A.C. or D.C. Primary Battery System.** For low voltage lighting, control and other d.c. circuits normally fed from commercial power sources and requiring standby batteries to insure uninterrupted operation in emergencies. If normal supply fails, a relay instantly transfers the entire load to an independent and extremely reliable primary battery reserve until normal service is restored. Emergency operation can be maintained indefinitely from the standby battery. Visual indications show reserve capacity available. No current or apparatus needed for battery charging. Visual inspection is only battery maintenance required. This system is the ultimate in dependability, simplicity and economy.

**Description.** Edison Primary Batteries are zinc, copper-oxide, alkaline electrolyte type. A complete cell consists of: Factory-assembled element of positive and negative plates, can of caustic soda for mixing electrolyte, heat-resisting glass or enameled steel jar, porcelain cover, bottle of battery oil, terminal nuts and washers.

Renewing active materials restores an exhausted cell to full capacity. This simple operation requires only a new element, can of soda and bottle of oil which constitute a renewal. Other parts are permanent. Panels in zinc plates accurately indicate stage of exhaustion. All cells have liberal safety factor. Operating voltage averages 0.6 to 0.65 depending upon discharge rate. Use chart to select proper cells for load requirements.

## How to Select Proper Number and Type of Cells for Direct Operation or Standby

**How to Select Cells.** With above chart, proper type and number of Edison Primary Cells can be readily determined for a wide range of low voltage d.c. power requirements where the following information is available:

1. Maximum current in amperes required by apparatus cells are to operate. Always base selection on highest current rate, continuous or intermittent.
2. Minimum ampere-hour battery capacity desired.
3. Minimum voltage required at battery. Allow for voltage drop between battery and apparatus due to resistance of line, contacts, etc.

The letters on the sloping lines in the chart refer to the Identification Table which shows the corresponding types, numbers, and capacities of the cells.

Along bottom of chart, locate point which corresponds to maximum current required. From this point, follow a vertical line up to its intersection with first sloping line on which is found a cell having an ampere-hour capacity near-

est to that desired. Cell or cells designated on this line will most economically deliver maximum current needed.

From point where vertical and sloping lines intersect, follow a horizontal line to left hand side of the chart to find voltage of cell. This point on voltage scale shows minimum voltage at which cell will deliver its rated ampere-hour capacity at maximum current it will be called upon to furnish to connected apparatus.

To determine proper number of cells of type selected which should be used in series, divide the minimum cell voltage into the minimum battery voltage required to satisfactorily operate the apparatus.

For applications where cells will be subject to low temperatures for extended periods, detailed service conditions and operating requirements should be submitted for recommendations. This same procedure should also be followed when cells are desired for intermittent service where the maximum discharge will be of only a few seconds duration.

## Eveready Air Cell Radio A Batteries

A-2300

A-2600

A-1300

A battery originally developed for owners of radios not on a power line. Has low ampere-hour cost, long service life, no recharging, constant voltage, and no shelf depreciation.

The Nos. A-2300 and A-2600 are for receivers drawing no more than 0.66 (660 milliamperes). No. A-1300 for receivers drawing no more than 0.2 (200 milliamperes).

Uses a liquid electrolyte but is shipped dry. In the dry state it undergoes no shelf depreciation.

Packed 1 in a unit package.

No.	A-1300	A-2300	*A-2600

\*For heavy drain air cell receivers, order with prefix "S."

## Eveready Air Cell Batteries

No. T-1600

No. T-2600

For railroad, telephone and industrial use. The low ampere hour cost, long life and sustained voltage make these batteries desirable for telephone and signal work.

Available in two conservatively rated capacities—300 ampere hours and 600 ampere-hours.

Made in single cell units, also in batteries consisting of two cells in series. The average voltage per cell is 1.25 volts, falling to 1.0 volts per cell at the end of their capacity. Uses a liquid electrolyte.

Shipped dry. In the dry state it undergoes no shelf depreciation. Packed one in a standard package.

No.	T-1300	T-2300	T-1600	T-2600

## No. 6 Eveready Ignitor Dry Cells

For heavy service in all dry cell applications. Recommended for ignition, radio, bells, buzzers, electric games, toys, lanterns and other battery operated devices. Has patented metal top construction. Protects against leakage and breakage.

Carefully packed from fresh stock and guaranteed to reach destination in perfect condition. Round Jackets, equipped with screw terminals unless Fahnestock spring terminals are specified.

Voltage 1 1/2.

Width 2 5/8 inches.

Height 6 5/8 inches.

Packed 12 in a standard package.

Weight per standard package, 27 pounds.

Prices for west coast somewhat higher.

No. 6.....each \$ .65

## No. 6 Eveready Columbia Gray Label Telephone Dry Cells

This battery is especially design for telephone work and light-drain service.

Round Jackets only.

Fahnestock spring terminals are furnished unless screw connections are specified.

Voltage, 1 1/2.

Diameter, 2 5/8 inches.

Height, 6 5/8 inches.

Quantity in std. pkg., 25. Approx. wt. of standard package, 58 pounds.

Prices for west coast somewhat higher.

No. 6.....each \$ .60

## No. 6 Eveready Special Railroad and Industrial Cells

Combines high amperage, heavy service life and light service life. Designed for railroad and industrial use where a wide range of service conditions from extremely heavy to extremely light are encountered.

Round jackets only. Screw connections unless Fahnestock Spring Terminals are specified.

Voltage, 1 1/2; overall diameter, 2 5/8 inches; overall height, 6 5/8 inches.

Packed 25 in a standard package.

Approximate weight of standard package, 62 pounds.

Prices for west coast somewhat higher.

Each.....\$ .70

## Eveready Hot Shot Batteries

Cells are connected by soldered copper strips and encased in a single metal container. The advantages of this new type covering are the ability to withstand rough usage, waterproof, thoroughly insulated to prevent internal short circuits and a woven fabric handle for convenience in carrying.

Prices for west coast somewhat higher.

**No. 746 Eveready A Batteries**

For 1.4 volt portable receivers.

For use with Eveready Mini-Max B battery.

A compact power supply unit for portable receivers.

Contains 3 Radio A cells.

Has 2-prong,  $4\frac{1}{2}$  volt socket.

Length,  $3\frac{15}{16}$  inches; width,  $1\frac{15}{16}$  inches; height,  $4\frac{1}{2}$  inches.

Packed 6 in a standard package.

Weight per standard package,  $7\frac{1}{2}$  pounds.

No. 746.....each \$ .75

**Eveready Portable Radio A Batteries**

1.4-Volt Portable Receivers  
7½ and 9 Volts A; 90 Volts B**

Terminals; plug in; -A, +7½A, +9A, -B, +90B.  
Dimensions, 10½x3¼x4 inches.  
Packed 1 in a unit package.  
Weight per unit package, 6½ pounds.

No. 754.....each \$5.45

**No. 487 Eveready Mini-Max B Batteries  
for Farm Type Receivers**

**45 Volts**

Terminals; socket; +22½, +45.

Dimensions, 5½x2½x7¼ inches.

Packed 10 in a unit package.

Weight per unit package, 44 pounds.

No. 487.....each \$2.50

**No. 482 Eveready Mini-Max Portable  
Radio B Batteries**

**45 Volts**

For 1.4 volt portable receivers.

Mini-Max gives more than double the listening hours of a conventional battery of equal size or about the same service life as a conventional battery of twice the size.

Equipped with duplex socket.

Size: length 3½ inches; width 1¾ inches; height 5½ inches.

Packed 6 in a standard package.  
Wt. per standard package, 11½ lb.

No. 482.....each \$2.15

**No. 467 Eveready Mini-Max Radio B Batteries**

**67½ Volts**

For miniature radios.

A new and utterly different construction makes this battery last twice as long as a conventional battery of equal size.

Height, 3¼ inches. Length, 2¼ inches. Thickness, 1¾ inches. Weight, 12 ounces.

Packed 6 to a unit package.

Weight per unit package, 4½ pounds.

No. 467.....each \$2.45

**No. 738 Eveready Portable Radio B  
Batteries**

**45 Volts**

For 1.4 volt radio receivers.

Gives more than double the service of the conventional battery of equal size.

Standard socket.

Size, 3x2½x4½ inches.

Packed 2 in a unit package.

Weight per unit package, 2¾ pounds.

No. 738.....each \$3.15

**No. 768 Eveready C Batteries**

**Horizontal Type, 22½ Volts**

Suitable for portable sets where light weight and small size are essential, and for self-contained sets having battery compartments too small to permit the installation of a larger B battery.

Plug-In type terminals. It has plus, minus 3, minus 4½, minus 16½, minus 22½ terminal markings.

Length, 4½ inches; width, 2¼ inches; and height, 2¾ inches.

Packed 1 in a standard package.

Weight per standard package 1 pound, 8 ounces.

No. 768.....each \$1.70

**No. KS-8089 Dry Battery Gauges**

A well made instrument for quickly testing battery life. It is compact, easy to carry and use and is reliable.

Designed by Bell Telephone Laboratories for use in testing No. 6 dry batteries used in telephone sets. It is manufactured to the specifications of and inspected by Western Electric Company. Has scale markings to show 0, 5, and 50% life remaining in dry batteries with separate scales for 2-cell and 3-cell batteries. Not arranged for testing single cells.

Pocket type, with cloth carrying bag with snap fasteners and equipped with Western Electric W2BM cord. Moving element has jeweled adjustable bearings and also has adjustable stops.

It will be necessary to allow a time interval of at least three minutes between consecutive readings in order to permit the winding to return to approximate room temperature. This instrument will be capable of withstanding a breakdown potential of 110 volts, a.c. applied between the cord clips and the case.

No. KS-8089.....each \$4.25

**No. 24 Sterling Pocket Ammeters**

This pocket ammeter is universally used for testing dry cells. It has 0-35 ampere scale, 1-ampere divisions.

This is a durable instrument, having correct scale calibration and a clearly marked dial.

Full nickel finish.

Packed in individual boxes and supplied in a standard package containing 10 boxes. Shipping weight, 3 pounds.

No. 24.....each \$1.85

**Sterling Pocket Voltammeters**

Packed 1 in a box, 10 boxes in standard package. Shipping weight, 3 pounds.

**No. 44**

Tests amperage of dry cell A batteries and voltage of "Hot Shot" and storage A batteries; 0-35 amp. scale, 1-amp. divisions; 0-10 volt scale, 1/2-volt divisions.

No. 44.....each \$2.50

**No. 45**

Tests amperage of dry cell A batteries and voltage of either dry or storage B batteries up to 50 volts; 0-35 ampere scale, 1-ampere divisions; 0-50 volt scale, 1-volt divisions.

No. 45.....each \$3.60

**No. 38A Sterling Voltmeters****For Portable Radio Batteries**

For testing 90-volt B batteries and 1.5-volt A batteries.

The flexible terminals, designed to fit any type of socket hole, prevent shorts and permit inclining of meter for convenient reading.

Scale, 0-100 volts, 5-volt divisions. Scale, 0-2 volts, 1/10 volt divisions.

Tests 45-volt and 90-volt B batteries and 1 1/2-volt A batteries.

No. 38A.....each \$3.25

**No. 42A Sterling Graphic General Testers****For Portable Radio Batteries**

Designed for servicemen and dealers for testing all portable A and B batteries with a single tester.

Red and green color chart for all standard batteries including 45-volt and 90-volt B batteries and 1.5-volt, 4.5-volt, 6-volt and 7.5-volt A batteries.

Flexible terminals for battery protection and convenient reading.

Scale, 0-100 volts for special sizes of B batteries, 5 volt divisions.

No. 42A.....each \$6.00

**G-E Tungar Battery Chargers****Form A—Autotransformer—Garage Type****No. 6RB33B1—3-18 Cells, 6 Amp.—Half Wave****No. 6RB33B2—3-36 Cells, 6 Amp.—Half Wave****115 Volt, 60 Cycles****No. 6RB33B1**

Recommended for use by repair shops, car dealers, garages, service stations, and tire dealers.

Single dial switch control turns on a.c. and regulates charging rate. Silver-plated a.c. switch contacts for long life and trouble-free service. Fuse protection for battery and Tungar bulb.

Overall dimensions: height, 10½ inches; depth, 7½ inches; width, 18½ inches.

Finished in red and white acid-resisting finish.

Shipping weight, 32 pounds.

**No. 6RB6B1****3-18 Cells, 12 Amp. or 3-36 Cells, 6 Amp.—Full Wave****115 Volts, 50/60 Cycles**

Recommended for use by garages, service stations and repair shops.

This tungar charges six 6-volt batteries at 12 amperes or twelve 6-volt batteries at 6 amperes or the equivalent.

New, easy-to-read meters. Two plug-in control panels regulate the charging rate to permit charging at a fast or slow rate or a combination of both.

Overall dimensions: height, 20⅞ inches; depth, 9⅞ inches; width, 11½ inches.

Finished with red lacquered case and ivory enameled panel.

Shipping weight, 57 pounds.

Price includes two No. 189048 Tungar bulbs.

No. 6RB6B1.....each **\$77.00**

**No. 6RB6B5****3-36 Cells, 12 Amp. or 3-72 Cells, 6 Amp.—Full Wave****115 Volts 50/60 Cycles**

Recommended for use by large garages, fleet owners and super service stations.

This tungar charges twenty-four 6-volt batteries at 6 amperes or twelve at 12 amperes or the equivalent. Provides fast, one-day charging service.

New easy-to-read meters. Charges at a fast rate, slow rate, or a combination of both.

Overall dimensions: height, 20⅞ inches; depth, 9⅞ inches; width, 11½ inches.

Finished with red lacquered case and ivory enameled panel.

Shipping weight, 84 pounds.

Price includes two No. 189049 Tungar bulbs.

No. 6RB6B5.....each **\$89.50**

Similar outfits for other voltage and frequencies are available.

**No. 6RC124F4 G-E Battery Chargers****Eighty Deluxe****105 to 125 Volts, 60 Cycles****Approved by Underwriters' Laboratories, Inc.**

Combines, in a single unit, a fast-charger and a high-rate discharge tester. Substantially charges a normal run-down battery in less than one hour.

Efficient operation and long life are obtained by the use of a copper oxide rectifying element.

A single setting of the charger controls sets the high 80-ampere charging rate for the proper time and then tapers automatically.

Bell alarm sounds if battery is connected in reverse, thus preventing damage to battery or charger.

Precision-type meters measure the charging rate and cell voltages.

High rate discharge battery test equipment is built in.

Equipped with G-E fan-cooled copper oxide rectifier, 10-foot d.c. leads, test leads, and coiling racks for cords.

Plugs into standard outlet agreeing in rating. A.C. current consumption, 10 amperes or approximately 1150 watts under normal conditions. Heavy duty a.c. cord set furnished with each charger. Timing device is a synchronous motor, electric clock to provide automatic shutoff at the exact time predetermined by the time chart on panel.

Coarse and fine switches permit very close adjustment of charging rate. Test harness with 4 pin connectors is included.

Dimensions: height, 29 inches; width, 21 inches; depth, 20 inches. Shipping weight, 150 pounds.

No. 6RC124F4.....each **\$199.50**  
No. K6686126G1, Extra Test Harness.....each **2.50**

**No. 6RC156F1 G-E Battery Chargers****One Hundred Deluxe****115 Volts, 60 Cycles**

Combines, in a single unit, a fast charger and a high-rate discharge tester.

Has automatically controlled, two-rate charging. Initial high rate of 100 amperes reduces automatically to low, safe, finishing rate when battery is 75 per cent charged.

Bell alarm sounds if battery is connected in reverse thus preventing damage to battery or rectifier.

Retractable, 10-foot charging leads are enclosed in casing when not in use.

Equipped with an efficient and reliable fan-cooled metallic rectifier.

Has high-rate discharge battery test. Voltage reading for individual cell or overall battery is controlled by selector switch. Has additional test

leads for voltage regulator, generator testing, and other necessary voltage tests.

Furnished with G-E precision-type meters.

Plugs into standard outlet and draws only 12 amperes at 115 volts a.c. Heavy duty a.c. cord set is included.

Electric time clock for dependable, two-rate, accurate timing.

Coarse and fine switches permit very close adjustment of charging rate.

Dimensions: height, 37 inches; width, 23½ inches; depth, 18½ inches.

Shipping weight, 190 pounds.

No. 6RC156F1.....each **\$249.50**

### G-E Battery Chargers For Farm and Home Use

115 Volts, 60 Cycles

A selenium rectifier-type charger, small and light in weight.

Will charge battery without removal from the automobile.

Has automatic tapering charge from maximum rate to lower safe rate as battery becomes fully charged.

Furnished with durable, long a.c. cord with molded-on plug; long d.c. leads with battery clips.

Plugs into standard 115-volt, 60-cycle a.c. outlet.

**No. 6RS916A1** (One Day) is for home and general use. Will charge the average run-down car battery in 24 hours or less. Has gray case with blue trim.

**No. 6RS916A2** (Overnite) is for farm use to charge car, truck, and tractor batteries in 12 hours or less. Has gray case with red trim.

### G-E Copper Oxide Battery Eliminator

For Telephone Service

**No. 6RC61D4**—6 Volts, 0.35 Amp. D.C.  
115 Volts, 60 Cycle

Designed to deliver a noiseless d.c. of 6 volts, 0.350 amperes. There is a multitude of applications that come within this rating. A few of them are as follows:

New apartment house interphone systems; replace batteries (dry cell or storage batteries) on existing apartment house interphone systems; school interphone systems that come within rated output of this outfit; to supply power for way station telephones on railroad telephone lines; to supply power for local sounders on railroad telegraph lines—the smooth, humless d.c. obtained from this outfit (oscillograph shows no ripple) is praised by Morse code operators—any general application where d.c. not in excess of the rated output is desired.

This rectifier consists of a copper oxide rectifying unit, transformer and necessary specially constructed filter (condenser and choke coil) all mounted on a steel base plate and enclosed in a rugged casing. Casing has an attractive crystallized green finish, which will not chip or mar.

Terminals are provided to supply a small amount of a.c. at 6, 12 or 18 volts for bell ringing.

Approximate shipping weight, 21 pounds.

**No. 6RC61D4**.....each \$44.00

### G-E Full-Wave Tungars

For Charging Telephone Batteries

Form B—Insulated Transformer—Noiseless Type

**No. 6RB6B17**—3-24 Cells, 2-12 Amp. with Reactance—  
3-36 Cells, 2-12 Amp. without Reactance

115 Volts, 60 Cycles

With External Filter Reactance

This tungal when used in conjunction with No. 3126680 external filter reactance makes an excellent combination for float charging telephone batteries. The wide range of charging obtainable with this combination has made it popular for small, medium, and large size telephone exchanges.

In small and medium size exchanges where motor-generator sets are now in service, this combination tungal and reactance

is often used to supplement the motor-generator set especially during low load periods. This combination is particularly desirable for this purpose during week ends in those exchanges where a charging rate of 12 amperes or less is sufficient. This enables shutting down the motor-generator set and operating during this period at the much higher efficiency obtained from the tungal.

Employs the plug type control which simplifies balancing both sides of the outfit, as a visual indication of the settings on each side is given. An ammeter is provided on each side which further simplifies operation of the outfit.

Two or more outfits are often connected in parallel to obtain charging rates above 12 amperes. The full load efficiency is approximately 74% when used in conjunction with No. 3126680 reactance.

Approximate dimensions: height, 19 7/8 inches; width, 11 1/2 inches; depth, 11 5/8 inches.

Uses two standard 6-ampere tungal bulbs, No. 189049.

Approximate shipping weight, 91 pounds.

**No. 6RB6B17**.....each \$110.00

### No. 3126680 External Filter Reactance for Use with 12-Ampere Full-Wave Tungars

Used with 12-ampere full-wave tungars.

Height, 10 1/2 inches; width, 6 1/2 inches; depth, 7 3/4 inches.

Shipping weight, 73 pounds.

**No. 3126680**.....each \$42.00

### No. 6RB6B14—3-12 Cells, 2-12 Amp. with Reactance— 3-18 Cells, 2-12 Amp. without Reactance

This tungal is similar to No. 6RB6B17, the only difference being in the rated output voltage. When used in combination with No. 3126680 reactance it is adaptable to charging telephone batteries of 3 to 12 cells at an adjustable rate of 2 to 12 amperes. The plug type of control is used and two ammeters are provided. Incorporates all the features of the No. 6RB6B17 outfit.

Approximate dimensions: height, 19 7/8 inches; width, 11 1/2 inches; depth, 9 5/8 inches.

Uses two No. 189048 bulbs.

Approximate shipping weight, 82 pounds.

**No. 6RB6B14**.....each \$81.00

**G-E Full-Wave Mercury Tungars****For Charging Telephone Batteries****Form B—Insulated Transformer—Noiseless Type****No. 6RB23C1—9-24 Cells, 2.0-Ampere****115 Volts, 50/60 Cycles**

This mercury tungan has slightly lower ampere capacity. It will give full 2.0-ampere charging rate up to 52 battery volts, and tapers to 0.9 amperes at 65 battery volts. Adjustment of the charging rate is obtained by secondary taps brought to a terminal board, in conjunction with a rheostat. A high grade D'Arsonval ammeter is provided to indicate the charging rate. A filter reactance is incorporated as an inherent part of the outfit.

Full-load efficiency, 53%. Power-factor, 86%.

Approximate dimensions: height,  $16\frac{1}{16}$  inches; width,  $9\frac{1}{16}$  inches; and depth,  $10\frac{3}{8}$  inches.

Uses one No. 16X897 bulb.

Approximate shipping weight, 45 pounds.

No. 6RB23C1.....each \$75.00

**No. 6RB10C5—9-24 Cells, 6 Ampere****115 Volts, 50/60 Cycles**

This outfit is similar to No. 6RB23C1 except for higher current output. It will give full-rated output of 6 amperes from 19 to 52 battery volts. Adjustment of charging rate is by means of secondary taps brought to a terminal board, used in conjunction with a rheostat. An ammeter is provided to indicate charging rate. A smoothing filter reactance is incorporated.

Particularly desirable for small and medium sized exchanges and PBX's which are too large for two or three-ampere outfits and too small for twelve-ampere outfits. It is sometimes recommended for installations where a three-ampere continuous float charge is required, because of the extra capacity that a six-ampere rate allows for boost charging.

Approximate dimensions: height,  $17\frac{1}{2}$  inches; width,  $12\frac{1}{8}$  inches; depth,  $14\frac{7}{8}$  inches.

Uses one No. 45X674 bulb.

Approximate shipping weight, 75 pounds.

No. 6RB10C5.....each \$110.00

**G-E Copper Oxide Battery Chargers****For Telephone Service**

This copper oxide rectifier for telephone service obtains output adjustment over an extremely wide range in very small steps. A new type of variable transformer replaces the conventional transformer taps and resistance commonly used for adjusting. The dial mounted on the front of the cabinet gives perfectly uniform adjustment from zero to full load.

The rectifying unit is a copper oxide assembly, a permanent rectifying device of proven reliability and safety. After the charging rate is adjusted, no other attention is required.

The life of this copper oxide rectifier is practically unlimited. There are no parts to replace. A large number of units have been running on test continuously since 1925.

The efficiency of the rectifier is high since all the adjustment is made with a transformer. This eliminates the losses which occur when a resistance is used to obtain output adjustment.

An internal filter prevents objectionable hum. The filter choke coil and the transformer are vacuum-impregnated with Glyptal. The properties of Glyptal provide maximum mechanical and electrical durability. The rectifier is equipped with a D'Arsonval instrument which gives an accurate indication of the output current.

An attractive black wrinkle-finish casing is designed for maximum practicability and lasting beauty. Because the lower section is perforated it allows free air circulation to cool the unit.

Several different ratings have been standardized so that it is possible to provide a trickle charge for large batteries or a full charge for small batteries.

**G-E Full-Wave Tungars****For Charging Telephone Batteries****Form B—Insulated Transformer—Noiseless Type****No. 244708—11-12 Cells, 0.3-0.5-Ampere****115 Volts, 60 Cycles**

A small compact charger designed primarily for continuous trickle charging in a small PBX. A filter reactance is incorporated to prevent objectionable hum in the telephone circuit.

Designed to charge 11 or 12 cells at a variable resistance permits adjusting the charging rate from 0.3 to 0.5 amperes. Full load efficiency, 28%. Power-factor, 78%.

Approximate dimensions: height,  $9\frac{11}{16}$  inches; width,  $6\frac{3}{16}$  inches depth,  $8\frac{3}{4}$  inches.

Uses one No. 199698 bulb.

Approximate shipping weight, 25 pounds.

No. 244708.....each **\$52.00**

**No. 3049455—9-24 Cells, 1-3-Ampere****115 Volts, 60 Cycles**

This Tungan was designed primarily to meet the requirements of intercommunicating systems and PBX's. Extreme flexibility is a feature of this outfit. It can be used wherever a full-wave filtered output is required up to 3 amperes from 19 to 52 battery volts. Six sets of secondary taps brought to a terminal board located just inside the left-hand door, in conjunction with a rheostat controlled from the front panel permit a simple and easy method of adjusting the output over the entire range.

A high grade D'Arsonval ammeter, mounted on the front panel, gives accurate indication of the charging rate. A suitable filter reactance is incorporated in the design, to give quiet operation on telephone batteries.

Will give full 3.0-ampere charging rate at 52 battery volts, and taper to 1.75 amperes at 65 battery volts. Full load efficiency, 48%. Power-factor, 92%.

Approximate dimensions: height,  $17\frac{1}{2}$  inches; width,  $12\frac{1}{8}$  inches; depth,  $14\frac{3}{8}$  inches.

Uses 2 No. 12X825 bulbs.

Approximate shipping weight, 88 pounds.

No. 3049455.....each **\$112.00**

**G-E Copper Oxide Battery Chargers****For General Applications****\*115 Volts, 60 Cycles, A.C.**

This battery charger is available for charging all types of storage batteries, large or small. Once the charger is installed no other attention is required except an occasional adjustment to the charging rate.

Can be used wherever there is a battery to be charged: central and sub-station control batteries; emergency lighting batteries in central stations, hospitals, stores, theaters and manufacturing plants; telephone batteries in schools, industrial plants, offices, small exchanges and annunciator systems; alarm batteries for police and fire alarms, burglar alarms, industrial protective alarms and call systems; batteries operating starters on gasoline and diesel engines; industrial truck batteries, etc.

### G-E No. 6RB10Y5 60-Cell Full Wave Tungars

For 55 to 66 Cells, 3 to 6 Amperes  
115 Volts, 60 Cycles

Recommended for charging 55 $\frac{1}{2}$ -cell control batteries in central stations, sub-stations, etc.

The charging rate is adjustable from 3 to 6 amperes at 120-battery volts; 1.5 to 6 amperes at 150-battery volts; and tapers to 3 amperes at 175-battery volts.

May be mounted on switchboard, above or behind it, or in any out-of-the-way corner.

The full-wave Tungar bulb requires only a short period of time for heating the filament and then it starts rectifying as soon as the load is placed on the outfit.

Can be depended on to operate 24 hours a day with practically no attention. There are no moving parts to wear, which minimizes maintenance costs. The battery cannot discharge through the bulb in the event of power failure; and these outfits will automatically start charging again when a.c. power returns.

Battery volts, 120/150/175. Charging amperes, 6/6/3. Overall dimensions: height, 17 $\frac{1}{2}$  inches; width, 12 $\frac{3}{8}$  inches; depth, 14 $\frac{1}{8}$  inches.

Renewal tungar bulb: No. 45X674.

Approximate shipping weight, 95 pounds.

No. 6RB10Y5.....each \$164.00

Renewal Tungar Bulb, No. 45X674.....each 15.00

Similar outfits for other voltages and frequencies are available.

### G-E No. 6RB19Y2 Full Wave Tungars

For Charging Clock, Signal, Control Batteries, Etc.  
Form B—Insulated Transformer

6 Cells, 6 or 12 Ampere  
115 Volts, 60 Cycles

A charger used for charging 6-cell (12-volt) batteries, or it may be used to charge two 3-cell batteries. A snap of the tumbler switch changes the charging rate from 6 to 12 amperes. No other adjustment of the charging rate is provided, since it is generally not required on applications where this outfit is used. Two of these outfits are often connected in parallel to obtain a charging rate of 24 amperes at 12 volts.

Highly recommended for use in fire stations for fire apparatus batteries. Also used with No. 3126680 reactance to float charge telephone batteries.

Approximate dimensions: height, 11 inches; width, 9 $\frac{3}{16}$  inches; depth, 11 $\frac{1}{4}$  inches.

Uses two No. 189048 bulbs.

Approximate shipping weight, 43 pounds.

No. 6RB19Y2.....each \$62.00

### G-E 60-Cell Full Wave Tungars

115 Volts, 60 Cycles

These instruments are designed specially for float charging 60-cell control batteries in central stations, sub-stations, industrial plants, etc.

Designed to meet the exacting requirements of central station engineers, making it possible to replace present charging equipment for control batteries with highly efficient, quiet operating chargers.

No. 6RB22Y2  
55-66 Cells, 0.4-2 amp.

Incorporates micrometer adjustment of the charging rate, which is easily controlled from front panel.

The maximum charging rate of 2.0 amperes may be obtained at 120 or 150-battery volts, and tapers off slightly at 175-battery volts. A charging rate as low as 0.4 ampere at 120-battery volts can be obtained.

Battery volts, 120/150/175. Charging amperes, 2.0/2.0/0.75. Overall dimensions: height, 14 inches; width, 10 $\frac{1}{8}$  inches; depth, 11 $\frac{3}{8}$  inches. Approx.

shipping weight, 58 pounds.

Renewal tungar bulb: No. 16X897.

No. 6RB22Y2.....each \$125.00

Renewal Tungar Bulb, Cat. No. 16X897.....each 8.00

No. 6RB14Y1  
55-66 Cells, 0.4-8 amp.

Used primarily for trickle charging where there is a very small load or no load on the battery. It is arranged for wall, panel, or bench mounting.

Where this charger is to be used, the charging rate is usually predetermined; and once the charging rate has been set, no further adjustments are necessary, consequently, the outfit is supplied without instruments.

Designed to deliver a tapering charge which tapers from 0.8 ampere at 120-battery volts to 0.4 ampere at 175-battery volts. A cover on the top gives easy access to the bulb.

Battery volts, 120/150/175. Charging amperes, 0.8/0.6/0.4. Overall dimensions: height, 9 $\frac{1}{16}$  inches; width, 6 $\frac{3}{16}$  inches; depth, 7 $\frac{1}{16}$  inches. Approx. shipping weight, 32 pounds.

Renewal tungar bulb: No. 16X897.

No. 6RB14Y1.....each \$42.00

Renewal Tungar Bulb, Cat. No. 16X897.....each 8.00

No. 6RB10Y3  
55-66 Cells, 1.75-6 amp.

Simple, sturdy construction. An outfit for applications, which do not require extra refinements or capacity.

It is usually used where there is a voltmeter available on the switchboard for indicating the battery voltage, and consequently is supplied without a voltmeter.

Although there is some adjustment of the charging rate provided, this is primarily a tapering charger. The charging rate starts at 6 amperes at

120-battery volts and tapers to 1.75 amperes at 175-battery volts.

Battery volts, 120/150/175. Charging amperes, 6.0/3.0/1.75. Overall dimensions: height, 17 $\frac{1}{2}$  inches; width, 12 $\frac{3}{8}$  inches; depth, 14 $\frac{1}{8}$  inches. Approx. shipping weight, 95 pounds.

Renewal tungar bulb: No. 45X674.

No. 6RB10Y3.....each \$120.00

Renewal Tungar Bulb, Cat. No. 45X674.....each 15.00

Similar outfits for other voltages and frequencies are available.

## G-E Constant Potential Full Wave Mercury Tungars

Form B—Insulated Transformer

No. 6RB3E4, 115-Volt, 2.0-Ampere and

No. 6RB3E8, 230-Volt, 2.0 Ampere

115 Volts, 60 Cycles

No. 6RB3E4

This mercury Tungal rectifier is a constant potential device, designed specifically for operating electro-magnetic devices, such as solenoids, magnetic clutches, magnetic brakes, magnetic chucks, etc. It is also used extensively to operate small d.c. motors, card punching machines and innumerable other d.c. devices where power requirements are 2 amperes or less at 115 volts, d.c.

Furnished in a neat, strong, welded steel casing with two hinged doors allowing easy access to bulb and transformer. A double-pole tumbler switch mounted on the front panel breaks both sides of the a.c. line. Outfit is arranged for wall or panel mounting.

Approximate dimensions: height, 11 inches; width, 9 $\frac{9}{16}$  inches.

Uses one No. 16X897 bulb.

Approximate shipping weight, 60 pounds.

Cat. No. ....	6RB3E4	6RB3E8
Each. ....	\$50.00	65.00
Depth. .... inches	11 $\frac{1}{4}$	14 $\frac{1}{4}$

No. 6RB10E1, 115-Volt, 6-Ampere and

No. 6RB10E3, 230-Volt, 6-Ampere

115 Volts, 50/60 Cycles

No. 6RB10E1

This outfit is similar to the above outfit, except that it has a capacity up to 6 amperes. The applications are about the same. The output voltage regulation is well within the usual commercial allowance of 10% from no load to full load.

Approximate dimensions: height, 17 $\frac{1}{2}$  inches; width, 12 $\frac{1}{8}$  inches; depth, 14 $\frac{3}{8}$  inches.

Uses one No. 45X674 bulb.

Approximate shipping weight, 95 pounds.

Cat. No. ....	6RB10E1	6RB10E3

## G-E Half Wave Tungars

For Charging Clock, Signal, Control Batteries, Etc.

Form B—Insulated Transformer  
115 Volts, 60 Cycles

No. 204170—9-12 Cells, 0.5-2.5-Ampere

Nos. 204170 and 199717

A simple, compact, half-wave outfit designed to charge from 9 to 12 cells at an adjustable rate 0.5 to 2.5 amperes. Adjustment is obtained by means of two secondary taps used in conjunction with a 6-ohm resistance.

Supplied in a neat casing arranged for wall, panel, or bench mounting. A hinged cover allows easy access to bulb, resistance and transformer. No instruments are provided, since

they are not generally required on applications where this outfit is used.

Full-Load efficiency, 55%. Power-factor, 50%.

Approximate dimensions: height, 9 $\frac{1}{16}$  inches; width, 6 $\frac{3}{16}$  inches; depth, 8 $\frac{3}{4}$  inches.

Uses one No. 195528 bulb.

Approximate shipping weight, 25 pounds.

No. 204170 ..... each \$47.00

No. 199717—16-24 Cells, 0.5-2.5-Ampere

This tungal is similar in construction to No. 204170, except it has a wider d.c. voltage range. Three taps on the secondary, in conjunction with an adjustable resistance, provide full adjustment of charging rate from 0.5 to 2.5 amperes at 40, 50, or 60-battery volts. Very liberally designed throughout. Will charge up to 75 volts at 1.5 amperes.

Full-load efficiency, 60%. Power-factor, 50%.

Approximate dimensions: height, 9 $\frac{1}{16}$  inches; width, 6 $\frac{3}{16}$  inches; depth, 8 $\frac{3}{4}$  inches.

Uses one No. 189049 bulb.

Approximate shipping weight, 29 pounds.

No. 199717 ..... each \$48.00

## G-E No. 6RC138F4 General Purpose Copper Oxide Rectifiers

This type rectifier has been used successfully for several years in motion picture projection service.

Conservatively rated 1 kw. continuous output at 110 to 115 volts, d.c. For intermittent duty, where the duty cycle does not exceed 20 minutes per hour, it may be safely rated 1.5 kw. at 110 to 115 volts, d.c.

Line taps are provided for a range of line voltage from 190 to 250. May be operated in parallel where the load conditions exceed the rating of a single unit.

Rated d.c. output: 110-115 volts, 10 amperes.

Dimensions: height, 33 $\frac{3}{8}$  inches; width, 21 $\frac{1}{2}$  inches; depth, 16 inches.

No. 6RC138F4 ..... each \$250.00

## No. 500 G-E Plating Rectifiers

A complete unit which consists of transformers, copper-oxide stacks, ventilating fan, contactor, and auxiliary equipment.

Made of heavy steel with acid-resistant wrinkle finish.

Has removable front panel for access to all parts.

Transformers are vacuum-impregnated with insulating varnish, and the copper-oxide stacks are varnish-dipped to resist corrosion. A fan provides an even flow of air around the stacks and transformers.

Available in two output ratings: 6 volts, 500 amperes or 12 volts, 250 amperes. Higher output ratings may be obtained by connecting two or more rectifiers in series, parallel, or series-parallel. No 500 is normally used with a G-E manual On-Load voltage control to regulate tank voltage. However, if automatic voltage control is desired, the On-Load control is recommended.

## Fuse Capacity

No. of Rectifiers	A.C. Volts		No. of Rectifiers	A.C. Volts	
	230	440		230	440
1	20	10	5	80	40
2	40	20	6	90	45
3	50	25	7	110	60
4	70	40	8	125	60

For multiple rectifier installations, multiply the fuse sizes by the number of rectifiers for proper fusing.

When ordering, specify d.c. voltmeter and ammeter ratings for controls.

## No. 300 G-E Plating Rectifiers

A complete unit which consists of transformers, copper-oxide stacks, ventilating fan, contactor, and auxiliary equipment.

Transformers are vacuum-impregnated with insulating varnish, and the copper-oxide stacks are varnish-dipped to resist corrosion. An even flow of air around the copper-oxide stacks and transformers is maintained by a ventilating fan which brings the air in at the bottom of the rectifier and out through the top section.

Available with two output ratings: 6 volts, 300 amperes, or 12 volts, 150 amperes. The 6-volt model is suited to small tanks used for cadmium, zinc, chrome, or other still-plating applications. The 12-volt model is used for barrel plating and cleaning. Higher output ratings required by individual tanks can be obtained by connecting two or more rectifiers in series, parallel, or series-parallel. These are normally used with the G-E On-Load manual voltage control.

On-Load, hand-operated voltage control, with coarse and fine handles and START and STOP push buttons, provides adjustment of rectifier output to the tank. This On-Load control is designed with an overvoltage relay which automatically protects the rectifier or bank of rectifiers and the plating tank from application of excess voltage.

Has acid-resistant wrinkle finish.

## Fuse Capacity

No. of Rectifiers	A.C. Volts		No. of Rectifiers	A.C. Volts	
	230	440		230	440

## Edwards Telephone Rectifiers

For 110-130 Volts, 50-60 Cycles, A.C.

Edwards rectifying units consist of transformer, full-wave copper-oxide rectifier, filter condensers, chokes and fuses completely assembled in metal cabinet.

In the units for general signaling use, chokes and filter condensers are omitted, but otherwise they are identical.

All connections are plainly marked.

Large installations, or those where 120-volt service is not thoroughly dependable, often require an emergency storage battery. For this service, Edwards units can be equipped with a variable charging resistor, and, where necessary, an auxiliary relay to automatically transfer from rectifier to storage battery.

Standard finish of cabinet, olive green.

## Fansteel Selenium Rectifiers

For Railway Communications Service

Catalog 1937 Fansteel D.C. Power System consisting of three rectifiers and power control panel for 160-volt, 5-ampere d.c. supply to two telegraph line or printer circuits.

Fansteel Selenium Rectifier power units and battery chargers are supplied in standard or custom-built models for every direct current supply requirement in railway telegraph or telephone service.

## Power Units for Line Service

are supplied for wall or standard 19-inch relay rack mounting to furnish filtered direct current without battery to telegraph line, printers, perforators, re-perforators or distributor transmitter machine circuits. Output voltage is adjustable.

**Power Units for Local Circuits** eliminate batteries, supplying filtered direct current for local or "sounder" circuits. Output voltage is adjustable.

## Telephone Battery Chargers

are supplied for central switchboard or P.B.X. batteries at maximum charging rates ranging from 500 milliamperes to 12 amperes. They are designed to be connected to the battery continuously, all noise being eliminated by the filter network. When properly adjusted to the average load, they will not overcharge the battery. Coarse and fine adjustment switches and d.c. ammeters are provided on all standard models, which are assembled in steel housings for wall mounting.

## Battery-Rectifier Power Supply

for dispatchers' transmitters, other local telephone circuits, alarms, annunciators and other low voltage equipment, consists of a small storage battery and full wave filtered rectifier assembled into a steel cabinet for wall mounting. In operation, the rectifier is connected into an a.c. supply, charging the battery continuously at slightly more than the average circuit load. Supplied in 4, 6 and 8-volt models, regular duty or heavy duty with batteries of sufficient rating to permit long periods of operation when the a.c. supply is off.

**Dependable Performance** is built into every rectifier power unit or battery charger made by Fansteel Metallurgical Corporation. Rugged, heavy duty selenium rectifier stacks, built for long years of service, are made in the Fansteel plant under high standards of scientific quality control. All other components are made or selected under equally high standards. All equipment is designed by trained engineers well versed in the requirements of railway communications service.

**How to Order:** Specify intended use, a.c. line voltage and frequency, d.c. output volts and amperes (or number and type of cells of battery). For custom-built equipment, ask for Form 247. For complete references, ask for Fansteel Bulletin RDP-109.

Catalog 1312-P Heavy Duty Battery Rectifier Power Supply Consisting of 6-volt, 10.4 ampere-hour battery and 0.75 ampere selenium rectifier with filtered output for dispatchers' transmitters and other low voltage service.

**Raytheon Voltage Stabilizers**

Input, 95-130 Volts, 60 Cycles, Single Phase;  
Output, 115 Volts, Plus or Minus ½%

Cased

Uncased

Constant a.c. voltage is essential for effective operation of many electrical devices. When voltage stabilizer is built into products as original equipment, its simplicity and unique freedom from adjustments eliminate manual voltage adjustments in completed assembly.

Well suited for laboratory use a sit eliminates the variables introduced by changing line voltage.

All branches of the electrical communications industry use the voltage stabilizer extensively. Amplifiers used in talking motion pictures, radio transmitters, sound recording equipment, and telephone apparatus operate most effectively with a constant voltage input. May be made for any output voltage or for several different output voltages, all stabilized, single phase only. Also made for operating devices where inherent limitations of standard type may not be suitable.

Wherever correct operation of synchronous electric clocks is obtained, the voltage stabilizer will meet its specifications. If frequency varies, so that correct operation of synchronous electric clocks is not obtained, write for recommendations giving the change in frequency expected. Standard stabilizer is adjusted to operate with a unity power factor load. If load is materially less than unity, adjustment can be made at factory to suit.

\*May be connected for either 115 or 230 volts at the factory in any combination of input and output voltage, i.e.: 95-130-volt input, 115-volt output; or 190-260-volt input and 115-volt output.

†Prices upon application.

**Raytheon RECTICHARGERS**

For Telephone Power Supply

With Natural Ventilation

A constant potential battery charger for telephone service. Basically a dry disk rectifier with a Raytheon control circuit which maintains a substantially constant d.c. voltage output at any load, in the presence of wide changes in a.c. input voltage. Operation is accomplished without the aid of any moving parts.

A small storage battery, floated across the terminals of the unit, and the combination of the two will make a complete a.c. to d.c. telephone power unit.

**Operation**

When the load current demand is less than the rectifier rating, the unit supplies all the current required and at the same time delivers to the battery a trickle charge of the right amount to make up for the internal battery losses and to prevent destructive chemical action. If the current demand exceeds the rating, the excess is supplied by the battery. When the load drops back to a value below the unit rating, the unit output remains at its rated value. The difference between the unit rating and the load current is thus supplied to the battery until it is fully charged.

**Doubling the Current Rating**

Any size of unit may be connected to any make of constant current charger having a filter for telephone service through a special relay. It provides a definite cost saving incentive for using these combinations either for new installations or to increase the current capacity of existing installations.

## Raytheon RECTIFIER

(Battery Eliminators for Telephone Service)

An economical way of obtaining telephone direct current power direct from an alternating current source.

Improves telephone service by providing full direct current power for the best operation of the telephones.

A satisfactory way of supplying direct current power to PBX and PAX boards.

### Features

1. Outlasts many sets of batteries.
2. Eliminates the trouble and expense of routine service for battery inspection.
3. Releases wires carrying charging current from the central office to subscribers' PBX boards for revenue producing service.
4. Minimizes power cost because of high efficiency in converting a.c. to d.c.

### Steady D.C. Voltage

The PBX and PAX boards require a stabilized d.c. voltage to insure proper operation under the conditions of changing load normally encountered.

No. 1044-E and larger sizes include an exclusive d.c. stabilizing circuit which operates magnetically and, therefore, requires neither adjustment nor maintenance.

### Continuous D.C. Power During an A.C. Interruption

Relays may be added to change to a d.c. power source in the event of a.c. failure, a.c. sources are normally dependable, but applications are possible where even rare interruptions cannot be countenanced. In these cases, a change of source relay should be specified.

### Ratings

The established current ratings are conservative and the user will not find it necessary to de-rate any of them by adding a safety factor. Operates a telephone system for 24 hours a day as long as the maximum current demand does not exceed the rating.

However, it should be remembered that ratings are based on two assumptions: first, on their being installed in live air; second, on being placed where the maximum ambient temperature does not exceed 95° F. If ambient conditions exist which differ from the above, write for suggestions before selecting.

\*Operates one or two magneto telephone operators' headset transmitters. Change of source relay included.

Made to order for other wanted a.c. inputs and d.c. outputs.

Change of source relays can be supplied on all models. When not listed, order by adding suffix R to catalogue number.

## Western Electric

### Carrier Telephone Systems

#### Type C

A multi-channel carrier system operating at a frequency range of from 6 to 29 kilocycles. Provides facilities for superimposing three additional telephone circuits upon an existing open wire voice frequency telephone circuit.

The C5 Carrier Telephone Terminal is used at each end of a Type C Carrier Telephone System and the C1 Carrier Telephone Repeater is used at intermediate points of such a system to amplify the three carrier channels.

Where the total length of entrance and intermediate cable involved is relatively short, a Type C system employing two C5 terminals without repeaters can be operated under average conditions over lines up to about 150 to 200 miles in length. By using intermediate C1 Carrier Telephone Repeaters and spacing them approximately 150 miles apart, the length of such a system can be extended almost indefinitely provided the transmission and crosstalk characteristics of the line are satisfactory.

When repeaters are not employed the Type C system can be arranged to operate with either manual or automatic regulation of the circuit net losses. When one or more repeaters are required the latter arrangement is always utilized.

#### Ringing

The C5 terminal is designed to operate with 1000-cycle ringer equipment. Any standard 1000-cycle terminal or intermediate ringer can be used. Western Electric 1000-cycle ringer oscillator equipment is recommended. Three of these units are required for each C5 terminal, one being used for each channel. The ringing equipment is not an integral part of the terminal and should be ordered separately.

#### Power Supply

The C5 terminal and the C1 repeater may be operated from either 24 and 130-volt office batteries or by the addition of suitable power supply equipment from a 105 to 125-volt, 50-60-cycle, a.c. source. In battery operated case about 6 watts of 55-volt, 50-60-cycle power is also required for the repeater, and a like amount for a terminal if the carrier pilot channel equipment is employed.

The C5 terminal or the C1 repeater can be obtained mounted complete on one relay rack bay. This bay may be  $8\frac{3}{4}$ ,  $10\frac{1}{2}$ , or  $11\frac{1}{2}$  feet in height. Additional relay rack space may be required for the associated equipment required.

The selection of the apparatus required for a carrier system is dependent upon all the physical and electrical characteristics of the line on which it is to be placed. Such information should be forwarded to Graybar in a specially prepared questionnaire which can be obtained upon request. After the job has been studied, quotations and complete recommendations will be made on equipment to meet your requirements.

#### Type G1

The Western Electric G1 Carrier Telephone System is a relatively simple and inexpensive single-channel system. The equipment is small in size and has been arranged for operation from an a.c. supply of 105-125 volts, 50-60 cycles.

The carrier frequency employed is 10.3 kc. It is generated by a vacuum-tube oscillator at one terminal only, which is called the active terminal. Both upper and lower sidebands are transmitted over the line and the carrier is transmitted along with them for use in modulation and demodulation at distant terminal which is called the inert terminal because it contains no vacuum-tube apparatus and requires no power supply. Transmission in the reverse direction is accomplished in the same way except for the fact that a phase corrector is required at the inert terminal.

For ringdown operation 20-cycle signaling is employed on a simplex basis. For cases where this is not feasible a simple composite set is available which provides two signaling paths, one for the carrier circuit and one for the voice circuit on which the carrier is superimposed.

C5 Carrier Terminal

C1 Repeater

*Western Electric*  
No. H1 Type Carrier Telephone Systems

No. H1 Type Carrier Telephone—Terminal Panel, Line Filter, and Balancing Panel Mounted in Apparatus Cabinet

A single channel system for use on open wire lines.

Equipment includes provision for operation on a ring-down basis and can be applied on a line without the loss of any existing service. Suitable for use as a permanent installation, and also for temporary or emergency circuits. Typical applications are on the telephone lines of telephone, railroad, power, oil and pipe line companies where long distance telephone facilities are required.

The power supply may be either 105 to 125 volt, 50 to 60

cycles, single phase, a.c. or regular central office filament, signal and plate battery potentials.

This system, without an intermediate repeater, finds its widest application on open wire circuits of about 50 to 200 miles in length. With one or two intermediate repeaters this system is applicable on circuits up to as much as 500 or 600 miles in length, depending on gage of open wire conductors, amount of intermediate cable in line, number of bridged way stations, etc.

*Western Electric*  
No. V1 Telephone Repeater  
A.C. Operated

Designed to fill requirements for railroads and pipeline companies for trunkline or dispatch purposes.

When used as a toll line or trunk repeater, it may be equipped for various kinds of signalling (20, 135, or 1000 cycles) and may be operated on the same circuit with a telegraph channel when the necessary composite set is used.

Also provided with precision line balancing networks for use with uniform lines or adjustable networks for use with lines having non-uniform impedance characteristics.

When used as a dispatch repeater, it is equipped with a by-pass for the  $3\frac{1}{2}$  cycle signals of the train dispatching equipment and is not arranged for operation with telegraph or on a phantom group basis. The dispatcher repeater is limited to open wire use.

The power supply unit, the rectifier of the signal battery, and the ringing supply unit operate on a 105 to 125 volt, 50-60 cyclesource.

For more complete information on all types of telephone apparatus and cable, consult your nearby Graybar office.

## Western Electric Voice Frequency Loading Coils

### Available Voice Frequency Loading Coils and Loading Units for 2-Wire Telephone Circuits

M Type Loading Unit  
Phantom Group

No. 632 Loading Group

By the application of loading coils on telephone cable circuits the unit loss can usually be reduced to the order of one-third to one-fourth the non-loaded value. The reduction is less than this amount at low frequencies and more at high frequencies, resulting in a nearly constant loss at all important voice frequencies. This contributes to the fidelity of reproduction, which is dependent largely upon a uniform transmission of the various frequencies required for intelligibility and naturalness. The loaded circuit is superior to the non-loaded circuit with respect to both loss and transmission distortion.

The following table lists the code numbers of the individual coils and loading units which comprise the different classes and include their nominal design inductance values.

Class	Code No.	Nominal Inductance—Henry	Class	Loading Units	NOMINAL INDUCTANCES—HENRY	
					Each Side Circuit	Phantom Circuit
I-a	632	.088	II	MF1	.172	.063
	638	.044		MF3	.044	.025
	639	.022		MF4	.031	.018
I-b	643	.135		MF5	.031	.018
	644	.175		MF6	.031	.018
	645	.250		MF9	.088	.050
				MF10	.088	.050
				MF11	.088	.050

#### Loading Coil Cases

Potting arrangements for the loading coils and units listed are available for a wide range of installation conditions and circuit complement sizes.

When only a few loaded circuits are required, the small size of the non-phantom type coils make it especially economical to pot these coils in individual containers suitable for installation within cable splice sleeves in aerial and underground installations. For larger groups of non-phantomed circuits, up to about 100 Class I-a coils and 25 Class I-b coils, or for locations where conditions may be difficult for "Splice Sleeve" loading, low cost types of lead sleeve cases are available. These designs are suitable for aerial and underground installations. For larger loading complements, welded steel case designs are available; these differ in finish and minor installation details, for aerial and underground installations. Also, a limited number of case designs are available for small complement office installations on apparatus racks.

For phantom loading units, lead sleeve type case designs are available for 1, 2, and 3 loading units and welded steel designs provide for complements in the range of 4 to 80 loading units.

## Western Electric No. 1417 Type Magneto Telephones

A local battery magneto wall set arranged for anti-sidetone rural service. Equipped with high efficiency No. 635A transmitter and No. 706A receiver. Furnished with a shelf for writing.

The standard type telephone set operates on three dry cells and is equipped with a No. 48 type (5-bar) generator.

#### Equipment

Two or three batteries are required but must be ordered separately. In addition to the apparatus mentioned, telephone is equipped with the following:

Code No. 635A Transmitter  
Code No. 706A Receiver  
Code No. R2DW Receiver Cord  
Code No. 143Y Switch-Hook  
Code No. T1C Transmitter Cord (6 Inches)  
Code No. 113D Induction Coil  
Code No. 8A Transmitter Bracket

#### 3-Cell Type

\*Arranged for a No. 149E condenser which may be wired in the ringer or receiver circuit if desired.

3-Cell, Closed View

For more complete information on all types of telephone apparatus and cable, consult your nearby Graybar office.

## Western Electric Magneto Mine Telephones No. 1336 Type

No. 1336—Outer and Inner Doors Open

These are metal case magneto telephones having all apparatus and parts treated to resist the action of moisture. Primarily designed for use on heavily loaded lines where code ringing is employed. Intended chiefly for mine service where danger from explosive gases is not present. Also recommended for outdoor use.

**DRY CELLS.** Two standard size dry cells are required for each telephone to furnish current for talking.

Two special cartons, impregnated with moisture-proofing compound are furnished with each No. 1336 type telephone. These are to be substituted for the standard cartons furnished

with the dry cells. These cartons resist the action of any moisture that may form on the inside of the case and prevent current leakage and rapid deterioration.

No. 1336A. This telephone is not equipped with a ringer as it is intended for use where an extension bell is preferred to the regular telephone ringer. Also for service where all the calls will be outgoing.

Nos. 1336E and 1336K. These telephones differ from the No. 1336A in that they are equipped with a ringer and an iron hood for protecting the gongs.

No. 1336J. This telephone differs from the No. 1336E only in that a condenser is provided to permit the ringers of this telephone as well as others on the same line, being rung even though its receiver may have been left off the switchhook.

Transmitter No. 647 type. Receiver No. 706. Generator No. 48C.

Code No.	Receiver Cord	Condenser	RINGER Code No. Resistance		Signaling Service	For Line Load
1336A	R2DW	None	None			
1336E		None	45BG	2500	{ Code Ringing }	{ Heavily Loaded }
1336J	15-In.	149A	45BG	2500		
1336K		149A	45FG	1600		

In addition to the apparatus listed above the No. 1336 type telephone is equipped with a No. 143J switchhook and a No. 31 induction coil.

Special No. 1336 type telephones equipped with a heavy brass padlock and with two keys are obtainable. The padlock is attached to the chain in place of the latch pin. Orders must state that padlocks are desired.

### No. 1536E Explosion-Proof Mine Telephone

This type of telephone is for use in mines where explosive gas is present. In the words of the United States Bureau of Mines the Western Electric Mine Telephone Type No. 1536E "is permissible for use in mines or other locations where methane or other explosive gases or coal dust are or are likely to be present in dangerous proportions."

This telephone set is enclosed in a cast iron housing  $8\frac{7}{16} \times 11\frac{1}{4} \times 17\frac{1}{2}$  inches having a sloping roof and a hood extending out from the top of the door. These two features protect the working parts of the set from damage by falling debris and facilitate the shedding of water. This

Closed View

construction permits mounting the transmitter, receiver and generator-handle entirely exposed on the door but under the protection of the hood. The set is therefore under all conditions immediately recognizable as a telephone.

The design of this set safeguards against the explosions which might result from the sparking of the switchhook and generator shunt spring contacts. Safeguards against explosions due to sparking caused by poor or loose connections also have been incorporated and every precaution has been used to guard against mechanical injuries to coils and other parts which might later develop into sparking points.

## Western Electric Subscriber Magneto Desk Set Boxes

### No. 300 Type with No. 48 Type Generators

With ringers to operate on a.c. for code ringing service between central office and telephones.

Used with desk stands and No. 250 type telephone sets.

## Western Electric No. 684BA Subscriber Sets

A small anti-sidetone common battery subscriber set intended for use in two party selective or four party semi-selective flat rate service in dial areas subject to inductive interference.

Ringer No. B1AL; condenser No. 195A; and induction coil No. 101A. (The No. B1AL ringer is equipped with one No. 41A and one No. 41B gong).

Code No.	COMPOSED OF			Condenser No.	For Ringing Service	Used on Lines as Regards Load

300N	48A	38BG	2500	149A	Code	Heavily

\*No. 38BG ringer can be furnished when specified.

For more complete information on all types of telephone apparatus and cable, consult your nearby Graybar office.

## Western Electric

### No. 302 Type Central Battery Telephone Sets

No. 302AW-3

No. 302BW-3

The combined telephone set consists of a housing and a base on which is mounted the induction coil, condenser, ringer, and other apparatus. Telephone set mounting and a hand set form the complete telephone set.

Intended for use in common battery service.

Nos. 302AW-3 and BW-3. For individual line, P.B.X. extensions, and bridged stations.

Nos. 302EW-3 and FW-3. For 2-party selective and 4-party semi-selective stations, and divided code ringing.

The suffix -3 refers to a black finish telephone set.

Code No.	Tel. Set Mounting	Dial No.	Dial Adapter No.	Apparatus Blank No.	§Cords	Hand Set
†302AW-3	H1-3	.....	.....	82A-3	¶D2D-9	F1AW-3

*†302FW-3	H1-3	5HA-3	59A	.....	¶D3AL-9	F1AW-3

\*When specified can be equipped with No. 61P filter to suppress dialing induction into radio receiving sets.

†For use at manual stations. ¶For use at dial stations.

§Cords are 5½ feet long. Can be obtained in 9, 13, and 25-foot lengths when specified in the order.

¶When specified No. D2E-9 cord assembled with No. 273A plug can be obtained instead of No. D2D-9.

¶When specified No. D3AD-9 cord assembled with No. 273A plug can be obtained instead of No. D3AL-9.

For more complete information on all types of telephone apparatus and cable, consult your nearby Graybar office.

## Western Electric

### No. 250 Type Telephone Sets

With proper connections this set can be in common battery dial on manual areas.

Each set consists of an F1AW-3 hand set, an AA1-3 telephone set mounting, and the necessary cords and wiring. Each set requires a suitable subscriber's set associated with it in order to complete the station equipment.

Code No.....	250AW-3	†250BW-3
Dial No.....	.....	5HA-3
Dial Adapter No.....	.....	59A

Apparatus Blank No.....	82A-3	.....
-------------------------	-------	-------

---------------	--------	--------

†When specified in order, set can be obtained equipped with No. 61P filter to suppress dialing induction into radio receiving sets.

‡Cords 5½ feet long furnished unless otherwise ordered. Available in 9, 13, and 25-foot lengths. If cord equipped with plug is desired, specify D4W-9 cord and 283B plug.

### No. 251 Type Telephone Set

Same as the No. 302 type except that it is furnished without ringers and provided with a special ringer mounting for a Stromberg-Carlson No. D-2993 harmonic ringer.

Code No.....	251AW-3	251BW-3
Color.....	Black	Black
Used for.....	Manual Systems	Dial Systems

## Western Electric

### Hand Set Telephones

#### No. 1011A

For installer's and repairman's use in manual areas. Consists of soft rubber handle containing the following:

- No. F1 Transmitter Unit
- No. HAI Receiver Unit
- No. W2BT Cord, 4 Ft. Long, Connected Externally
- Condenser (.10 Min., .15 Max. Mf.)
- Talking and Monitoring Switch
- Apparatus Blank

The switch is connected so as to shunt out the condenser when in the talking position.

## Western Electric Central Battery Telephone Sets

### No. 300 Type—For Outdoor Use

Closed View

For outdoor use in anti-sidetone equipment in manual or dial service. Consists of a gray finished metal mounting in which induction coil, ringer, and condensers are assembled. A moisture-proofed handset is hung on a switch hook which is assembled to inner door. Inner door provides a method of mounting dial or apparatus blank. Outer door is fastened by means of a lock and has an instruction card holder welded to its inside surface.

A No. 29A bracket is required for use in mounting each of the telephone sets on buildings, fences, poles, etc., and must be ordered separately.

Approximate overall dimensions: height, 1 foot 1 inch; width, 9 inches; depth, 6 $\frac{1}{4}$  inches.

### No. 320 Type

Intended for use in Class 1, Groups B, C, and D atmospheres, as defined by the National Electrical Code.

The component parts of this set, except the hand set, are contained within an enclosure consisting of a cast aluminum housing and base having a threaded joint. Protection against probability of flames resulting from internal explosion reaching surrounding atmosphere is accomplished by strength of castings and by controlling length and clearance of openings through which any element in the design is brought through the housing.

Intended for use in common battery systems and for individual lines.

## Western Electric Connecting Blocks

### No. 8A

One screw and cord tip terminal on each connector.  
Number of connectors, 6.  
Ebonized wood base: length, 5 inches; width, 1 inch; thickness,  $\frac{5}{8}$  inch.

### No. 11 Type

No. 11A

Two screw terminals on each connector. Opposite terminals electrically connected.  
Base: length, 1 $\frac{1}{2}$  inches; width, 1 $\frac{1}{2}$  inches; thickness,  $\frac{1}{16}$  inch.

Code No.....	11A	*11B	†11C
No. Connectors.....	2	2	2

\*Consists of No. 11A with black finished metal cover.

†Same as No. 11B except under-surface of top of cover has insulating strip to protect terminals from short circuits.

### No. 12 Type

No. 12E

Same as No. 11 Type except has three slots in under side of base.

Base: length, 1 $\frac{1}{16}$  inches; width, 1 $\frac{1}{8}$  inches; thickness,  $\frac{1}{16}$  inch.

Code No.....	12E	†12F
No. Connectors.....	3	3

†Consists of No. 12E with black finished metal cover.

### No. 30 Type

Binding posts have locknuts with posts spun over to prevent loss of locknuts.

Composition base: width, 1 $\frac{1}{2}$  inches; thickness,  $\frac{1}{2}$  inch.

Code No.....	30A	30B	30C	30D
No. Connectors.....	12	22	32	52
Length Base..... inches	4 $\frac{3}{16}$	7 $\frac{1}{16}$	10 $\frac{7}{16}$	16 $\frac{1}{16}$

### No. 31 Type

Each connector has one locknut binding post and one soldering terminal, brought out on the side.

Composition base: width, 1 $\frac{1}{2}$  inches; thickness,  $\frac{1}{2}$  inch.

Code No.....	31A	31B	31C	31D
No. Connectors.....	12	22	32	52
Length Base..... inches	4 $\frac{3}{16}$	7 $\frac{1}{16}$	10 $\frac{7}{16}$	16 $\frac{1}{16}$

### No. 42A Type

Cover Off

For use with combined handset mountings for fastening the handset mounting cord and the inside wire. Has a removable metal cover.

Composition base: length, 1 $\frac{1}{16}$  inches; width, 1 $\frac{1}{16}$  inches; thickness,  $\frac{1}{32}$  inch.

No.....	42A-4	42A-9
Color.....	Ivory	Brown

For more complete information on all types of telephone apparatus and cable, consult your nearby Graybar office.

## Western Electric Telephone Cords

There is a Western Electric cord to fit any telephone set or switchboard. If none of the cords described below meet your requirements, write us, sending if possible a sample cord or a sketch, paying particular attention to the kind of tip required. Always specify length of cord when ordering.

### Desk Stand Cords

Code No.	Maker of Tinsel Conductor	Covering	Length Feet	Use
D2D9	2	Cotton	5½	302 Type Combined Tel. Set
D3AK9	3	Cotton	5½	Desk Stands, B1—Hand Set Mounting
D4AL9	4	Cotton	5½	302 Combination Telephone Sets Hand Set and Desk Stands

### Hand Set Cords

H3AA9	3	Cotton	4	E1 and F1 Hand Set
-------	---	--------	---	--------------------

### Switching Cords

R2EY	2	Cotton	3	706 Type Receiver
R2FA	2	Cotton	2	716 Type Receiver

## Western Electric Tubular Fuses

### Fiber Shell Type

Lead fuse wire prevents possibility of overheating shell. Fuses carry rated currents indefinitely without injury; act reliably on one and one-half times rated values.

Fuses of same code number and rated capacity give consistent performance as to rated and operating current values.

### No. 7T

Used with B cable terminals and fuse chambers. Rated capacity, 7 amperes.

### No. 11C

Used with Nos. 98A and 1079AP protectors. Rated capacity, 7 amperes.

### No. 7A

Used with Nos. 77, 1074A, 1075A, and 1078A protectors. Rated capacity, 1, 2, 3, 4, 5, or 7 amperes, as specified.

## Western Electric Condensers

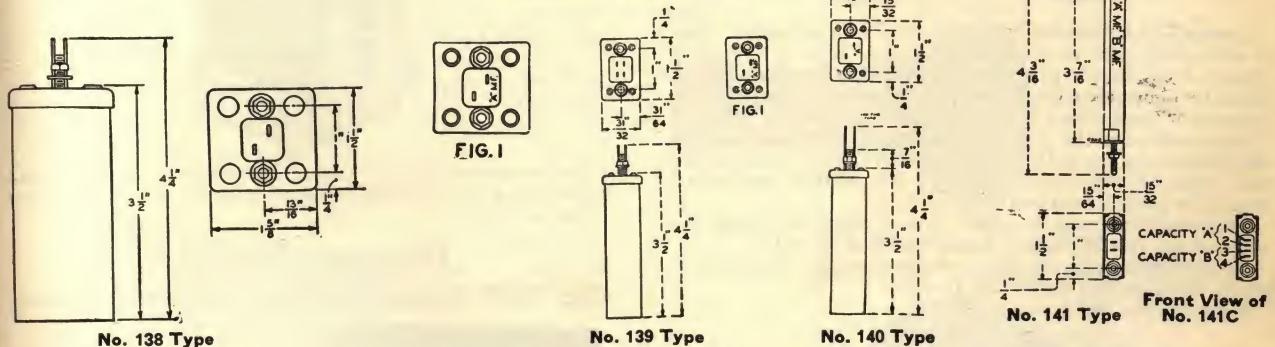

Western Electric telephone condensers are of tinfoil and paper type. Paper dielectric used in separating tinfoil plates is prepared from selected stock.

### Unmounted Type

Tested on 500 volts d. c.

### Mounting Plate Type

Code No.	Fig. No.	CAPACITY M.F.				Tested on Voltage
		Minimum	STAMPED ON CONDENSER AT		Maximum	
138A	1	1.00	A	B	1.25	1000 A.C.
139A	1	2.00	2.00	...	2.50	500 D.C.
140B	.	.50	.50	...	.62	1000 A.C.
140E	.	.125	.125	...	.160	1000 A.C.
141A	.	1.00	1.00	...	1.25	500 D.C.
*141C	{	.50	.50	...	.625	500 D.C.

141D	.	.25	.25	...	.32	500 D.C.
141J	.	.125	.125	...	.16	500 D.C.

\*Values stamped at "A" are measured between terminals 1 and 2; values at "B", between terminals 3 and 4.

For more complete information on all types of telephone apparatus and cable, consult your nearby Graybar office.

**Western Electric****Subscriber Extension Bell Sets**

Intended for auxiliary use as extension bells in connection with wall, desk, and transmitter arm telephones.

**No. 127 Type**

Set consists of a ringer mounted on the cover of a box. Each set is equipped with No. 2A binding posts for making line connections.

Operating current, a.c., not biased.

Golden oak finish.

Approximate overall dimensions: width, 6½ inches; height, 5⅞ inches; depth, 4⅞ inches.

Code No.....	127F	127G
Ringer.....	38BG	38BG
Approx. Resist.....ohms	2500	1620

**No. 592 Type—Loud Ringing**

Consists of a die-cast base upon which is mounted: what is essentially the mechanism of a No. B1A or No. B3A ringer; a condenser (when required); two No. 26B (3-inch diameter) gongs; and suitable terminals for connecting the subscriber set in the telephone circuit.

Resonators for the gongs are cast as an integral part of this base. The set is intended for both indoor and outdoor use. For indoor installations, the No. 169AW backboard should be used for mounting the set.

Also available with No. 42A (4-inch diameter) gongs instead of the No. 26B gongs when specified on order.

Approximate overall dimensions: length, 7¼ inches; width, 6⅞ inches; depth, 2⅞ inches.

Replaces No. 392 type.

No.	Con- denser	D.C. Resistance, Ohms	Vacuum Tube	Use
592AW	198A	4600	.....	In Manual or Dial Lines, in Individual Two-Party Selective and Four-Party Selective Line Service.
592BW	.....	4600	.....	On Magneto Non-Polarized Ringing Lines.
592CW	.....	2000	359A	In Four-Party Full Selective and Eight-Party Semi-Selective Service.

**Western Electric****Hand Generators****No. 48 Type****No. 48A**

A powerful generator. Used in telephones for heavily loaded line service.

With a non-inductive load of 1500 ohms and an armature speed of 1025 rpm., this generator will give 80 volts a.c.

Code No.	Voltage	Normal Condition of Generator Circuit	Principal Use and Description
48A	80 A.C.	Closed	Standard for Telephones Intended for Use on Heavily Loaded Lines
48C	80 A.C.	Closed	Mine Telephone — All Parts are Treated to Resist the Action of Moisture and Fumes
48G	80 A.C.	Closed	No. 1800 Switchboards
48H	80 A.C.	Open	Switchboards
48J	80 A.C.	Open	No. 1800 Switchboards
48P	80 A.C.	Open	Switchboards

**No. 50 Type**

Delivers 60 volts a.c. under a 1500-ohm non-inductive load (after being short-circuited for ½ minute) and an armature speed of 1025 rpm.

**Western Electric****No. 299F Subscriber (Hand Generator) Sets**

Consists of a No. 48A generator mounted in an oak cabinet having a hinged cover.

For alternating current.

Width, 8 inches; depth, 6 inches; 9 inches.

## Western Electric

### No. 98 Type Telephone Set Protectors

Protects central battery and magneto telephones against high potential (lightning) and abnormal current (crosses with electrical circuit).

Has two No. 11C fuses. Line protection, 2 wire.

Code No. .... 98A 98B  
With Two Protector Blocks, Nos. ... 26 and 27 26 and 30

## Western Electric Protector Blocks

No. 26

No. 27

Ordinary lightning discharges will cause an arc across the air gap between the carbon blocks but will not heat them sufficiently to melt the cement used for holding the carbon plug in place. A cross with an electric light or power line, however, will cause a discharge or repeated discharges of such duration that the heating of the carbon insert of the No. 27 blocks will melt the cement holding it in place. This allows the mounting spring to push it into direct contact with the No. 26 block, thus permanently grounding the line.

**No. 26.** A solid piece of hard non-dusting carbon. Used with Nos. 27 and 30 type protector blocks.

**No. 27.** Used in central office protectors. Consists of a white porcelain frame with a countersunk hard carbon plug fastened in place with low temperature fusing cement.

## Western Electric Accessories

**JACKS.** Welded frame or cast, single or multiple mounting, single or multiple springs for use with standard Western Electric plugs are available for all purposes.

**KEYS.** Push button or lever type with practically any spring combination can be supplied.

**PLUGS.** Single or multiple, 1, 2, or 3-conductor for use with jack can be supplied.

**RELAYS.** Many types and innumerable spring combinations for low voltage work can be supplied.

**RESISTANCES.** Inductively and non-induction on brass core, single and double wound on Miconite core, spool type of various values and Lavite core types can be supplied.

**TELEPHONE WIRES.** Textile insulated, lacquer treated in 14, 16, 18, 19, 20, 22, 24 gage, single, paired, triple, and quadruple. In various colors for all low voltage work.

## Western Electric Protector Mountings

No. 83A

Protects drop wires between overhead lines and subscriber's telephone set from lightning.

Consists of an iron box  $8\frac{3}{4} \times 3\frac{1}{2} \times 2\frac{1}{2}$  inches with a hinged cover having a No. 84A protector mounting within it. Arranged for pole mounting. Intended to be equipped with Nos. 26 and 30 protector blocks for cable protection for five pairs of wires. Box mounted underneath crossarms on poles. Two mounting lugs are provided for this purpose.

For more complete information on all types of telephone apparatus and cable, consult your nearby Graybar Office.

## Western Electric Protector Mountings No. 93AW

Consists of a galvanized metal box having a slip cover with locking screws and two screws for mounting protector in box. Cover includes a shield of insulating material which protects line terminals from gases expelled during fuse operation. For use in housing No. 98A protector in outdoor installations. When equipped with a No. 98A protector entirely replaces the No. 1086A protector and is coded the 1093AW protector mounting.

Overall dimensions,  $7\frac{3}{4} \times 5\frac{1}{2} \times 2\frac{1}{8}$  inches.

## Western Electric Receivers No. 716 Type

No.	Receiver Unit	Receiver Holder	Receiver	Head-band	Use
716C	HA4	11	.....	* ....	Waystations in Train Dispatching Systems
716D	....	..	716A	11A	Common Battery Circuits
716E	....	..	716B	11A	Local Battery Circuits

\*Used with No. 11A headband which must be ordered separately.

No. 706A

Consists of a moulded case with HA-1 receiver unit. Springs for making electrical contact with receiver unit and a cap for holding unit in place are provided.

## Western Electric No. 635A Transmitters

Designed to permit the use of the high quality F1 transmitter unit in desk stands and wall sets. Furnishes a better grade of transmission than older desk stand transmitters using a carbon button.

## Western Electric Ringers

No. 38 Type

Western Electric Company ringers are wound with black enamel wire of Western Electric manufacture. Designed to give maximum ringing efficiency and at the same time offer high impedance to voice currents.

The gong posts are designed for engaging slotted gongs thereby assuring permanent gong adjustment.

Code No.	Ringer Code No.	Resistance Ohms	Biasing Feature	Current Adjusted for	Gong Posts Woodwork		Code No.	Gongs Diam. In.
					Length In.	Thick. In.		
38BG	38B	2500	None	A.C.	1 37/64	5/8	26A	3
53AG	53A	1020	None	A.C.	1 1/16	5/8	29A	2 1/2
53BG	53B	2500	None	A.C.	1 1/16	5/8	29A	2 1/2
53FG	53F	1620	None	A.C.	1 1/16	5/8	29A	2 1/2

No. B1AL

A unit type biased ringer intended for use in H1 type telephone set mountings. Has a cantilever type biasing spring arranged for three settings and a stroke adjusting stop for adjusting the sound output.

Equipped with one No. 41A and one No. 41B gong. Can also be obtained equipped with two No. 40C or one No. 40D and one No. 40E gong when specified on the order. These ringers can also be obtained with a wooden clapper (P-465312) instead of a metal clapper, when specified in the order.

Has two coils having a total d.c. resistance of 4600 ohms  $\pm 10\%$ . The 900-cycle inductance is minimum 20 henries.

For more complete information on all types of telephone apparatus and cable, consult your nearby Graybar office.

## Western Electric

### No. 551 Type P.B.X. Private Branch Exchange Switchboards

No. 551A

A switchboard of the single position, non-multiple type. Arranged for operation with either a manual or a dial central office.

Switchboard in either oak with natural finish or in mahogany with a mahogany-walnut finish. Lumber is kiln dried and thoroughly seasoned to prevent warping and cracking.

#### Capacity

Station Line Circuits.....	40
Trunk Circuits.....	10
Cord Circuits.....	10

Ten station line circuits may be equipped with line relays for long lines.

No. 551B

Similar to the No. 551A except has larger capacity, as follows:

Station Line Circuits.....	320
Trunk Circuits.....	15
Cord Circuits.....	15

Twenty of the station line circuits may be equipped with line relays.

This switchboard has a maximum capacity of 320 lines but may be had with a capacity of eighty lines, the different capacities being arranged for by the use of different local cables.

For more complete information on all types of telephone apparatus and cable, consult your nearby Graybar office.

## Western Electric

### No. 1801 Private Branch Exchange Switchboards Sectional Unit Type

No. 1801 Switchboard  
Showing Method of Enlarging

No. 1801 P.B.X. Switchboard System B,  
Wall Mounted with Cord Casing

No. 1801 P.B.X. Switchboard System D,  
Desk Mounted

The Western Electric No. 1801 P.B.X. is a manual central battery system utilizing a small single position, non-multiple switchboard of the sectional unit type.

Suitable for use in medium-size industrial plants, department stores, apartment buildings, schools, hospitals, sanitariums, hotels, and public buildings.

May be used with either a dial or a manual central battery central office. It is flexible and economical in operation, particularly suited to locations where the final capacity cannot be determined initially and is readily adaptable to the diversified line and traffic conditions encountered on private branch exchanges.

The units which comprise the No. 1801 P.B.X. can be assembled in the same way as those of a sectional bookcase.

The wood may be either oak in full red oak finish, or birch in mahogany finish.

#### Equipment Arrangements

The following four equipment arrangements are available:

SYSTEM A. Communication between attendant and stations.

SYSTEM B. Communication between attendant and stations.

Intercommunication between stations.

SYSTEM C. Communication between attendant and stations.

Intercommunication between stations. Trunk lines to a central battery central office. Direct current ringing.

SYSTEM D. Similar to System C, except that station bells are rung with alternating current and the trunks of System D may be connected into either a dial or a manual central battery central office.

#### Power Requirements

Since the quality of service obtained from a P.B.X. is affected materially by the efficiency of the power supply, power equipment designed particularly for this kind of service should be selected.

For talking, signaling, and direct current ringing, the No. 1801 P.B.X. requires a 20-28-volt, single battery supply. The 20-cycle alternating current ringing current required for System D may be obtained from a source outside the P.B.X. or at the P.B.X. by the use of a hand generator.

## Western Electric

### No. 506 Type Cordless P.B.X. Switchboards

No. 506A

A single position turret of the cordless type. All connections are made by operation of keys.

Circuits are arranged for local manual service and for operation into either manual or machine switching central

offices. The wiring and equipment are same for all systems.

A desk stand is provided for use of attendant. When required a dial is furnished with desk stand so connections can be made to a dial central office.

Code No.	Capacity	506A	506B
Positions.....		1	1
Trunk Circuits.....		3	5
Connecting Circuits.....		5	5
Station Line Circuits.....		7	12
Attendants Telephone Circuit.....		1	1
Ringing and Buzzer Circuit.....		1	1

For more complete information on all types of telephone apparatus and cable, consult your nearby Graybar office.

### Western Electric No. 301A Portable Telephone Sets

For applications where a portable magneto telephone of rugged construction is required.

Set consists of a hand set and an aluminum chassis on which are mounted a hand generator, an induction coil, condenser, two battery containers, and a ringer mounting bracket. Assembled chassis is mounted in black fiber, wood-lined carrying case equipped with shoulder strap.

The F3CW-3 handset includes No. F1 transmitter unit and No. HA-1 receiver unit. A push-button switch in handset handle is used to set up the talking condition.

A ringer may be mounted in this set if one is desired; specify when ordering.

Four Type D, 1.5-volt dry cell flashlight batteries are required for operation. The low battery drain of the transmitter unit insures a long battery life. The batteries should be specified on the order if desired.

### Western Electric No. F1AW-3 Type Hand Sets

No. F1AW-3. For use with and forms a part of the No. 302 type combined telephone set. For general use at subscriber stations.

Consists of: No. F1 transmitter unit; No. HA1 receiver unit; No. H3C-9, 4-foot cord; No. F1W-3 hand set handle; No. P-456236 receiver cap; No. P-456235 transmitter cap.

No. F2AW-3. For use in central offices and P.B.X. systems. Similar to No. F1AW-3 except with 4-conductor cord terminating in twin plug. Replaces the No. E2A-3.

Consists of: No. F1 transmitter unit; No. HA1 receiver unit; No. H4U cord; No. 289A plug; No. F2W-3 hand set handle; No. P-456236 receiver cap; No. P-456235 transmitter cap.

No. F2BW-3. For use in anti-sidetone local battery talking, common battery signaling subscribers' stations in manual and dial areas, and in key cabinets. Similar to No. F1AW-3 except that it employs a 4-conductor cord.

Consists of: No. F1 transmitter unit; No. HA1 receiver unit; No. H4T-9 cord; No. F2W-3 hand set handle; No. P-456236 receiver cap; No. P-456235 transmitter cap.

For more complete information on all types of telephone apparatus and cable, consult your nearby Graybar office.

### Western Electric Portable Test Sets No. 1017C

No. 1017 Type

In birch mahogany finish case; length,  $6\frac{5}{8}$  inches; width,  $4\frac{7}{16}$  inches; height,  $8\frac{1}{16}$  inches. Weight, 7 pounds.

No. 1017E

Similar to No. 1017C set except equipped for use on either composited or straight telephone lines.

Contains the following:

- |                       |  |
|-----------------------|--|
| *No. 29F Generator    | No. 714 Eveready Battery                                 |
| No. 2E Buzzer         | (must be ordered separately)                             |
| No. 716B Receiver     | No. R2CD Cord, 2 feet                                    |
| No. 13 Induction Coil | No. 6000A Interrupter                                    |
| No. 649A Transmitter  | *Operates a No. 56A drop through 11,500 ohms resistance. |

No. 90530

List No.	Generator No.	RINGER		Gen. Operates Ringer Through Ohms
		Type	Ohms	
90530	22K	19B	2500	10,000
90510	22K	19H	500	35,000
90511	22N	19A	1000	50,000
90512	22N	19B	2500	100,000

Nos. 90510 to 90530

Consists of a generator and ringer in series for testing through various line resistances.

Birch finished case measures  $5\frac{3}{4} \times 6\frac{3}{8} \times 5\frac{1}{4}$  inches. A leather strap handle is provided.

### Western Electric G Type Handset Mountings

Arranged for use with the Nos. F1AW and F2BW or similar type hand sets.

Equipped with a bracket designed to permit adjustment of mounting to various lengths of desk top overhang. Bracket also permits mounting to be secured for hand set to hang on either side of the mounting or in front of the mounting.

Cardretainergroup P298106 must be ordered separately.

## Western Electric Railway Train Dispatching Telephone Systems

### Transmitter Arms

No. 1148DD

**No. 1148 DA.** Adjustable folding arm having telephone set incorporated in it; includes one No. 48DA transmitter arm, one No. 635B transmitter, one No. 716B receiver equipped with a No. 11A headband, one No. R2CT cord (2½ feet), one No. D3AB cord (8 feet), and two No. T1C cords (9½ inches); mounts on the side of a roll top desk.

**No. 1148DB.** Same as No. 1148DA, except that it is arranged to mount on the side of a flat top desk.

**No. 1148DC.** Same as No. 1148DA, except that it is arranged to mount on the top of a flat top desk.

**No. 1148DD.** Same as No. 1148DA, except that it is arranged to mount on a wall.

Intended for use in way stations in conjunction with Nos. 501A and 501B subscriber sets in train dispatching circuits.

### No. 650B Transmitters

Chest type transmitter intended for use in local battery circuits in train dispatching systems.

Contains an F2 transmitter unit.

Used with a No. 716B receiver and a No. 11A headband.

### Transmitter Attachments

Used for supporting chest type transmitter.

**No. 2A.**—Buckle only.

**No. 3A.**—Buckle and slate colored tape.

**No. 3B.**—Buckle and black colored tape.

**No. 3C.**—Buckle and white colored tape.

No. 3A

### Repeating Coils Nos. 70A and 77A

No. 70A

No. 77A

Intended for use in phantom and simplex circuits. No. 70A is for use in connection with a.c. selectors. No. 77A has coil mounted on a wood base.

	70A	77A
No. of Coils.....	1	1
No. of Windings Each Coil.....	4	4
Resistances, Ohms:		
Primary.....	2 of 45	2 of 20
Secondary.....	2 of 40	2 of 21
Impedance Ratio.....	1 to 1	1 to 1
Wood Base.....inches	11x8½	6x4

For more complete information on all types of telephone apparatus and cable, consult your nearby Graybar office.

### No. 162 Type A.C. Selector Sets

No. 162C Equipped with No. 60 Type Selector

For new installations. Replaces the No. 160 type.

Furnished in two models, both of which are identical in appearance and size, the components being mounted on a steel chassis which is housed in the metal backs, 9¾ inches high, 7 inches wide, and 6½ inches deep.

Finished in black and arranged for wall mounting.

**No. 162C** is for use at way stations in circuits which are not operated through repeating coils.

**No. 162R** is for use at way stations in circuits operated through repeating coils.

Mounting facilities are provided for the No. 60 type selector, which, however, is not furnished as part of the set because varying conditions require the use of different models of this unit. Includes features that permit their use in train dispatching, telephone systems employing Type C & H Carrier telephone equipment.

### No. 341A Transformers

Designed for use at a train dispatcher's station when the No. 60 type selectors on dispatching and message circuits are operated through transformers.

Especially designed to transmit low frequency selector impulses on long lines on which a large number of selectors are operated.

Approximate dimensions, 6x5x5½ inches.

### Foot Switches

No. 1B

Consists of a black finish case with a foot pedal and a set of contact springs.

Dimensions: 7½x3¾x5½ inches, including foot pedal.

**No. 1B.** Used with No. 502A Subscriber Set at train dispatching stations. Has single make contact for connecting battery to transmitter for talking.

**No. 3B.** Used with No. 502A Subscriber Set at train dispatching stations. Has one break and two make contacts and is used with loudspeaker.

**No. 3C.** Used with No. 501B Subscriber Set at way stations. Has two break and three make contacts for connecting battery to transmitter, for talking, and for changing the turn ratio of the induction coil to increase the efficiency of the subscriber set when transmitting and receiving.

**No. 3D.** Used with No. 501B Subscriber Set at waystations. Has two break and four make contacts and is used when a loudspeaker set is connected to the subscriber set.

### Way Station Desk Set Boxes

Used on train dispatching circuits in way station telephone sets with desk stand, flexiphones or transmitter arm, equipped with No. 635B transmitter and No. 716 type receiver.

No.	Con- denser	Induction Coil	Description
501A	142B	42	Equipped with One No. 1014A Push Button

No. 62A

No. 63B

The Nos. 62 and 63 type selector keys are motor driven master calling keys designed to operate any one or all No. 60 type selectors in a train dispatching telephone system.

No. 62 type is arranged for desk or table mounting.

No. 63 type is mounted in the face equipment of a No. 604 P.B.X. switchboard.

Available in two models of each type, the A model being

intended for use in systems using a 17 step selector signalling code and the B model for use in systems using a 27 step selector signalling code.

Code No.....	62A	62B	63A	63B
Approx. Height.....inches	12½	12½	10½	10½
Approx. Width.....inches	10¼	10¼	9¾	9¾
Approx. Depth.....inches	6½	6½	6¼	6¼

**Nos. 60AP and 60BP Selectors**

Operates on alternating current and is designed for use at waystations in train dispatching telephone systems in conjunction with Nos. 162C and 162R selector sets.

No. 60AP and 60BP selectors are designed to operate in a system using 17 or 27 step selector signalling code. The 60AP is equipped for receiving time signals.

No. 60BP is equipped with four selective ringing terminals instead of one as in No. 60AP but is not equipped to receive time signals.

For more complete information on all types of telephone apparatus and cable, consult your nearby Graybar office.

**No. 62B Selector Apparatus Cases**

Designed for use at the dispatcher's office in a train dispatching telephone system, and contains all of the signalling apparatus required at this station except the selector keys which are mounted separately.

Consists of a black finished metal box measuring 12¼x15¼x6½ inches, equipped with a hinged cover and latch and a metal chassis on which the component apparatus is mounted.

Arranged for wall mounting.

## Burgess Acousti-Booths

Acoustic Doorless Telephone Booths

### No. 601 Scout Shelf Type

A wall or shelf type booth for use in bus terminals, hotels, hospitals, stores, railway stations, banks, institutions and offices. Ideal for busy public places where available space is limited. Users can enjoy a comparative zone of quiet regardless of the noise and confusion nearby. Conversations are clearer, understandable and private. Thick walls of sound-absorbent material

soak up both direct and reflected noises.

Made of reinforced plywood; walnut finish.

Has instrument shelf, 23½x17 inches.

Outside dimensions: width, 28 inches; height, 32 inches; depth, 26 inches.

Shipping weight, 80 pounds.

No. 601 ..... each \$90.00

### No. 201 Floor Type

Because this booth is doorless, there is ample circulation of air to relieve the stuffiness which is common to the conventional door type telephone booth.

The acoustic walls absorb disturbing noises so that the voice is heard without reverberation or echo.

Made of a thick layer of acoustic material sandwiched between plywood panels. The interior panels are perforated to allow the sound to soak into the acoustic filler.

Has rich brown walnut stain finish. An electric fixture in the ceiling provides illumination. Clean and sanitary—the pedestal foundation makes sweeping easy.

Outside dimensions: width, 30 inches; height, 79½ inches; depth, 38 inches.

Inside dimensions: width, 24 inches, height, 76½ inches; depth, 35 inches.

Wood instrument shelf, 24x8¼ inches, provides a convenient support for taking notes.

Approximate shipping weight, 225 pounds.

No. 210 ..... each \$175.00

## No. 100 Churchill Telephone Booths

No. 100 Booth

Showing Light and Ventilator

A self-contained booth designed to meet the need of a booth without a floor. Acoustically designed; every effort is made to make this booth as sound-proof as possible.

For single or multiple installation.

Equipped with a reinforced back panel for mounting a wall telephone or coin collector.

Available in selected white oak, finished medium golden oak and selected birch, finished medium mahogany.

Has folding door with glass in door only.

The following equipment is furnished as standard: automatic door switch for lights and electric ventilator; silent electric ventilator; and complete metal lining.

Seats are also available in either type of lumber, as extras.

Overall dimensions: height, 84¾ inches; width, 30½ inches; depth, 30¾ inches.

Shipped knocked down and crated.

## Western Electric

## Lead Covered Telephone Cable

2121 Pair Cable

## Types of Cable

Lead-covered cable may be divided into three general classes as follows:

1. Paper insulated cable for aerial or underground use. (Lead covered or lead covered and jute protected or lead covered and steel tape armored).
2. Paper insulated cable, submarine or gully type. (Lead covered, steel wire armored).
3. Textile insulated cable.

## Aerial or Underground Cable

## Lead Covered

Under the usual conditions of installation of telephone cables the same type of cable may be used for aerial construction or in ducts underground. The various types of lead-covered cable for aerial or underground use are as follows: NH, CNB, CSA, BPA, DSM, and BST.

## Jute Protected

A type of cover for the cable sheath has been developed which effectively protects the sheath from soil corrosion. This protection consists of wrappings of paper and jute which have been impregnated with preservative compound and which are flooded with asphaltic compound while being applied to the cable. Cables having this covering are referred to as jute protected. Jute protected cables are about .2 inch larger in overall diameter than unprotected cables for smaller sizes and about .3 inch larger for full size cables. Any lead-covered cable can be furnished jute protected if so noted on the order.

## Tape Armored

This type of sheath covering is similar to that used for the jute protected cables except for the addition of the steel tapes and a further covering of asphalt flooded jute. For the tape armored cable the increase in diameter varies with the size of the cable from about .3 to .6 inches. Any lead-covered cable can be furnished tape armored if so noted on the order.

## Galvanized Tape Armored

Galvanized tape armored cable for aerial use can be furnished where some protection against low frequency induction from power lines is desired. If individual condition necessitates this type of cable, write nearest distributor, getting details and information; prices will be furnished.

## Unit Stranded Cable—Paper Pulp Insulation

A new form of paper insulation has been developed by the Western Electric Company which is known as pulp insulation because of its method of application to the wire. Paper is made directly on conductor in such a way as to form a continuous, seamless tube.

## Submarine and Gully Type Cable, Wire Armored

Paper insulated submarine and gully type cable may be divided into three general classes:

1. High dielectric strength, tight core cable. Used in comparatively long lengths where cost of repairing a break in cable will be less than cost of new cable.
2. High dielectric strength, loose core cable. Used in comparatively short lengths where high transmission efficiency and high dielectric strength are of importance. For example, a short crossing cable connecting important open wire.
3. Single paper insulated loose core cable. Used in comparatively short lengths where so high a dielectric strength is not necessary. For example, a short crossing cable connecting land cables.

## Submarine Type

Single or double armored cable can be furnished. Double armor is used in cases of severe mechanical requirements. In still water with a mud bottom, single armor will be sufficient. With a rocky or uneven bottom, or with strong tides or currents, double armor should be considered.

## Gully Type

A light wire armored cable for crossing gullies, small streams and swamps. This cable provides greater mechanical strength than the tape armored cable and is lighter and less expensive than standard wire armored submarine design. Has same protection against soil corrosion as jute protected cable.

## Textile Insulated Cable

Paper insulated cables are usually terminated in buildings by splicing on a short piece of lead covered textile insulated cable. Commercial textile yarns are liable to contain soluble salts, which will cause electrolytic action when exposed to moist atmospheres and result in poor insulation and sometimes produce corrosion of the conductors. It has been found that by removing such impurities substantial improvements of the insulating properties of the textiles are obtained. Only purified textiles are used in Western Electric Cables.

## Special Cable

Special conditions often require cables with different characteristics from those which have been standardized and coded. Paper insulated cable, designed to withstand test potentials up to 1,500 volts a.c., is supplied for special circuits such as for telegraph or signal circuits. If an individual condition necessitates special cable, write the nearest distributor.

## Composite Cable

Composite cable, composed of conductors of two or more gages can be furnished if desired. The combinations of pairs which will utilize the space within the lead sheath most economically are somewhat limited. Recommendations will be made along this line. Consult nearest distributor.

## Quadded Cable

Paper and textile insulated quadded lead covered cable for toll telephone and telegraph purposes can be furnished if desired. Recommendations will be made upon receipt of detailed information. Consult nearest distributor.

## Reels

Cable is shipped on reels. Ends of cable are fastened securely to reels, and unarmored cable is protected by lags nailed around periphery of reel.

## Guarantee

Coding of cables is on basis of actual number of pairs in cable. The number of pairs indicated in tables are guaranteed to be free from opens, shorts, crosses, and grounds. The capacitance and the conductor resistance are guaranteed not to increase nor the insulation resistance to decrease beyond the limits stated due to defective material or manufacture.

## Western Electric

## Lead Covered Telephone Cable

## Advantages

As a means to practically uninterrupted communication, Western Electric Lead Covered Cable offers a number of conspicuous advantages, making for better service, better public relations, and money economies.

This lead covered cable possesses several advantages of material benefit to its users, among which are:

1. They make use of the most suitable designs and materials to secure and maintain the highest class of telephone transmission, as determined by many years of research work conducted by Bell Telephone Laboratories, and by constant tests in the field, in close cooperation with the largest users of telephone cable in the world.

2. The reliability of the Western Electric product is proved by the fact that more than half the telephone cable throughout the world is of Western Electric design.

3. Cables are manufactured by the Western Electric as an essential part of the telephone plant which must not only give the most efficient performance possible, but must maintain this efficiency through the greatest possible number of years. To accomplish this object, every part of telephone cable is designed not only to give the electrical qualities required, but to insure a maximum of mechanical ruggedness and protection against damage. As an example of this, a given mutual capacitance can be obtained in either a soft core or a hard core cable. The hard core cable is somewhat larger in diameter and contains a larger amount of insulating paper. The soft core cable is bound to be soft or mushy to such an extent that it has a decided tendency to buckle when bent. It is therefore more difficult to install than the harder core cable. Western Electric cables are designed to have satisfactory mechanical characteristics.

## Transmission

Transmission efficiency of telephone cable depends upon its capacitance and conductor resistance. When telephone cable forms a portion of a completed telephone connection, the transmission efficiency of the telephone connection as affected by the cable portion depends somewhat on the relative position of the cable in that circuit and also on the type of other construction to which it is connected.

The length of circuit which, when connected to short subscribers' loops, will cause a transmission loss of 30 db. (units of transmission loss, called decibels) is considered about the maximum length over which commercial transmission can be secured.

## Type NH—Paper-Ribbon Insulated

**SHEATH.** Lead antimony.

**CONDUCTORS.** No. 16 A.W.G. single dry paper tape insulation. Blue-orange pairs alternating with green-orange pairs, except for two orange-white tracer pairs, one in the center and one in the outside layer and a red-orange pair in each layer containing an odd number of pairs.

**MUTUAL CAPACITANCE.** A.c. testing average any reel not exceeding .072 microfarad per mile of cable at 60°F.

**CONDUCTOR RESISTANCE.** Not exceeding 23 ohms per mile of cable at 68°F.; any conductor.

**INSULATION RESISTANCE.** Not less than 500 megohm miles at 60°F.; any conductor.

**DIELECTRIC STRENGTH.** Insulation between conductors capable of withstanding for two seconds an a.c. test potential whose maximum instantaneous value is 1000 volts. The insulation between conductors and sheath capable of withstanding a test with an a.c. potential whose maximum instantaneous value is 1400 volts.

Code No. and No. of Pairs	No. of Pairs Guaranteed	Thickness Sheath Inches	Mean O.D. Inches	Convenient No. of Feet on Reels	Approx. Weight Pounds per Foot
NH 26	26	.080	1.13	2000	1.8
NH 51	51	.089	1.52	1500	2.9
NH101	101	.103	2.11	1000	5.1
NH152	152	.113	2.54	750	7.1

## Capacitance

The capacitance of a cable circuit is important because it limits to a large extent the length of cable through which it is possible to transmit speech. The capacitance may be specified either as mutual, that is, the capacitance between the two wires or a pair; or as grounded, that is, the capacitance between a wire and all the other wires and the sheath. Mutual capacitance is preferable in defining the quality of the cable for telephone transmission, since the conductors are used in pairs as metallic circuits and seldom, if ever, singly as grounded lines. The grounded capacitance is about 1.6 times the mutual, but this ratio varies somewhat for different cables.

Capacitance may be measured by the d.c. charge method, the d.c. discharge method, or the a.c. method. The a.c. method, using a frequency of 800 cycles or higher, is preferable because it measures the true capacitance for the voice currents. The d.c. capacitance tends to be higher than the a.c. capacitance. The d.c. charge method is less subject to error due to improper manipulation of the testing equipment than the d.c. discharge method.

Western Electric cables are tested for mutual capacitance by the a.c. method, unless specifically requested otherwise.

## Extra Pairs

Extra pairs are placed in all cables containing conductors smaller than No. 16 to take care of any pairs which may become defective in manufacture. In the majority of cables all or part of the extra pairs will often be found good and may be used for additional circuits. All pairs of No. 16 A.W.G. and larger except in submarine cable are guaranteed to meet the specification requirements when the cable leaves the factory.

The coding of all cables is on the basis of the actual number of pairs. Actual and guaranteed numbers of pairs in the various sizes of standard cables containing conductors smaller than No. 16 A.W.G. are as follows:

Actual Pairs	Guaranteed Pairs
6 to 149	Actual pairs less one
150 to 249	Actual pairs less two
250 to 349	Actual pairs less three
350 to 449	Actual pairs less four
450 to 505	Actual pairs less five
606	Actual pairs less six
909	Actual pairs less nine
1212	Actual pairs less twelve
1818	Actual pairs less eighteen

## For Aerial or Underground Use

## Type CNB—Paper-Ribbon Insulated

**SHEATH AND INSULATION RESISTANCE.** Same as for Type NH. **CONDUCTORS.** No. 19 A.W.G. single dry paper tape insulation, with color groups depending upon size.

**MUTUAL CAPACITANCE.** A.c. testing, average any reel not exceeding .090 microfarad per mile of cable at 60°F.

**CONDUCTOR RESISTANCE.** Not exceeding 46 ohms per mile of cable at 68°F.; any conductor.

**DIELECTRIC STRENGTH.** Insulation between conductors capable of withstanding for two seconds an a.c. test potential whose maximum instantaneous value is 700 volts. The insulation between conductors and sheath capable of withstanding a test with an a.c. potential whose maximum instantaneous value is 1400 volts.

## Western Electric Lead Covered Telephone Cable

### Type AFA—For Inside Construction

**SHEATH.** Pure lead.

**CONDUCTORS.** No. 22 A.W.G. tinned, double acetate yarn and single cotton insulation, covering on each pair colored white and red-white.

**STRANDING.** Multiple, unit design 152 pairs and larger.

**TRACER PAIR.** One in outer layer colored white-blue or white-brown.

**INSULATION RESISTANCE.** Not less than 500 megohm miles at 60°F.

**CONDUCTOR RESISTANCE.** Not exceeding 96 ohms per mile of cable at 68°F.

**DIELECTRIC STRENGTH.** Insulation between conductors capable of withstanding for two seconds an a.c. test potential whose maximum instantaneous value is 700 volts. The insulation between conductors and sheath capable of withstanding a test with an a.c. potential whose maximum instantaneous value is 1400 volts.

Code No. and No. of Pairs	No. of Pairs Guaranteed	Thickness Sheath Inches	Mean O.D. Inches	Convenient No. of Ft. on Reels	Approx. Wt. Lb. per Foot

### Type NFA—For Inside Construction

**SHEATH.** Pure lead.

**CONDUCTORS.** No. 22 A.W.G. tinned, enamel, double acetate yarn and single cotton insulation, covering on each pair colored white and red-white.

**STRANDING.** Multiple, unit design 152 pairs and larger.

**TRACER PAIR.** One in outer layer colored white-blue or white-brown.

**INSULATION RESISTANCE.** Not less than 500 megohm miles at 60°F.

**CONDUCTOR RESISTANCE.** Not exceeding 96 ohms per mile of cable at 68°F.

**DIELECTRIC STRENGTH.** Insulation between conductors capable of withstanding for two seconds an a.c. test potential whose maximum instantaneous value is 700 volts. The insulation between conductors and sheath capable of withstanding a test with an a.c. potential whose maximum instantaneous value is 1400 volts.

Code No. and No. of Pairs	No. of Pairs Guaranteed	Thickness Sheath Inches	Mean O.D. Inches	Convenient No. of Ft. on Reels	Approx. Wt. Lb. per Foot

†Numbers refer to color combinations. Write for further information.

For more complete information on all types of telephone apparatus and cable see Western Electric Catalog 11.  
Consult your nearby Graybar office and warehouse.

This cable represents the highest development in the art of switchboard cable manufacture.

The CL type cable listed in the following tables consists of copper conductors, either tinned or enameled, with two servings of double acetate yarn and one serving of cotton impregnated with cellulose acetate.

Cellulose acetate impregnated conductors are referred to in the tabulation as lacquered conductors.

Cables having enameled conductors are identified by four digit code numbers, 1016CL, 1024CL, etc. All CL cables except the quadded 500CL and 1500CL type have an outer covering consisting of the following: the core of each cable is bound with a binder serving of cotton; a serving of paper tape; a serving of metal tape; a second serving of paper tape; and a serving of crepe paper applied longitudinally. Over this is applied a close braiding of cotton. The completed cable is painted with gray cable paint.

In quadded cable (500CL and 1500CL types), the cotton binder serving is omitted and a heavier first serving of paper tape is used.

Designed in three general shapes, flat, oval, and round. In the following tabulations the larger dimensions for oval or flat cable represent the width and the smaller dimensions the thickness.

## Western Electric Cable Terminals

### Type B—Protected

No. B26, Open

The listing of Type B cable terminals complete includes a terminal box, equipped with fuse chambers and binding post chambers, each of which is supplied with a cable stub attached and potheaded. Fuse chambers and binding post chambers may be ordered as separate items.

No. B26 terminal will terminate both a 26 pair underground cable and a 26 pair aerial cable. It provides for cross-connection. Other sizes have similar capacity ratings.

Pole seats may be used with the two smaller sizes of Type B cable terminals. These together with balconies for the large terminals can be obtained.

Code No.	Capacity Pairs	Cable Terminal Box	*Fuse Chamber		Binding Post Chamber

			B101B	2	B101B	2
B404	404	B404	B101C	2	B101C	2

\*B fuse chambers do not include the No. 7T fuses which must be ordered separately.

### Type F—Unprotected

Open

Provides a moisture-proof seal for lead-covered cables terminated on outside walls or poles.

Consists essentially of a metal sealing chamber having an insulating panel with binding posts, nuts, and washers. Provided with galvanized slip cover and detachable metal mounting plate. Terminal may be mounted with stubs out of top or bottom of mounting. With 5½-foot cable stub projecting from top of terminal. Can be furnished with 10 or 12-foot cable stub (out of top only), or 8-foot cable stub (out of top or bottom as specified). Side View

## Reliable Protected Cable Terminals

Type B27 with No. 27L 5-Ampere Fuse

Type B56 with No. 56 5-Ampere Fiber Fuse

Type B55 with No. 55 5-Ampere Fiber Fuse

For terminating lead covered cable with facilities for drop wire distribution. Adds to the convenience of installation, wiring and maintenance. A detachable mounting bracket simplifies the installation.

The cable chamber is on the pole side and is accessible by removing the terminal from the bracket. All drop wiring is done on the side away from the pole.

Individual clips for carbons and fuses, prevent the carbons from crossing when removing fuses. It is unnecessary to remove these fuses when installing jumper wires as all binding posts are at right angles to the fuses.

The heavy binding posts are treated to prevent season cracking Mounted in molded bakelite and cannot short or turn.

Fuse clips and all other metal parts are rounded to prevent scratches to linemen. Beveled washers on binding posts make it easy for linemen to insert wires. Jumper wires enter the terminal through a heavy fiber fanning hole in bottomplate.

The cast cable chamber is air tight with a full round rubber gasket which seals cable wires. Cable wires are terminated in hollow studs and can be soldered outside of the cable chamber.

The can top is square with a heavy cast cover which acts as protection against bending or puncturing. It is guided from three points to prevent contact with live parts.

Supplied with No. P495 saw-tooth discharge blocks, No. P197 carbons and 7-foot, No. 22 A.W.G. stub.

	37.00	23¾	7	37

## Type RP Reliable Protected Cable Terminals

Type RP-27 with No. 27L 5-Ampere Fuses

Type RP-56 with No. 56 5-Ampere Fuses

This is a compactly designed, reversible protected cable terminal. Designed to meet requirements for a small protected terminal of high quality and fine workmanship.

Rugged in construction, yet light in weight. The mounting bracket is detachable for easy installation. The cable chamber is a durable casting—will outlast the cable. A sliding cover is provided making the terminal reversible and eliminating the bother of handling separate types for installation with stub at top and bottom.

Made of corrosion resistant aluminum alloy throughout. Insulation is molded bakelite.

Furnished with P495 sawtooth discharge blocks, P1384 carbons, and a 6-foot, No. 22 A.W.G. stub out of top.

### Tobe Filterettes

#### No. 1217 For Permanent Installation

Used with oil burners, refrigerators, call systems, relays, traffic beacons, small sign flashers, dish washers, printing press motors, and small generators.

For operation at 250 volts a.c. or d.c.

Handles up to 10 amperes. Equipped with screw terminals. Frequency range, 300 kc. to 400 mc.

Contained in steel knockout box 8⅞x3⅞x1⅞ inches.

Has ¼-inch mounting holes on 2⅞x6⅞-inch centers in back of box.

Individually boxed.

Furnished in standard packages of 6 units.

No. 1217.....each \$12.50

#### No. 1209 For Permanent Installation

Used with large motors, d.c. generators, rotary converters, and electro-medical equipment.

For operation at 125 volts a.c. or d.c.

Handles up to 50 amperes.

Contained in steel knockout box 4⅞x7⅞x3¼ inches.

Has No. 4 mounting holes on 3¼x6-inch centers.

Screw terminals have 10-32 slotted hex head screws, with lockwashers.

Individually boxed.

Furnished in standard packages of 4 units.

No. 1209.....each \$26.00

#### No. 1239 For Fluorescent Lamps

Connects across 115-volt input to fluorescent lamp to stop feed-back of radio noise along lamp cord or wiring.

Contained in molded phenolic case, 1⅜x1⅞ inches, with wrap-around bracket for single screw mounting.

Has insulated flexible leads for connection to a.c. or d.c. line.

Convenient, flat shape fits small space in lamp base or fixture housing. Works well in broadcast and popular short wave bands.

Standard package, 12.

No. 1239.....each \$.95

## Tobe Filterettes No. 1168AD For Permanent Installation

For marine service, or for use in refrigerating plants and where high humidity is encountered. For operation at 40 volts a.c. or d.c.; handles up to 55 amperes.

Contained in cast housing  $8\frac{3}{4} \times 6\frac{1}{4} \times 4\frac{1}{8}$  inches, with rigid cover held on by six swing bolts; integral mounting lugs with  $\frac{3}{8}$ -inch holes on  $9\frac{1}{8} \times 5\frac{7}{16}$ -inch centers; 10-32 terminal screws. Standard package, 1.

No. 1168AD.....each \$34.00

### No. 1197 For Permanent Installation

For marine service. For operation at 250 volts a.c. or d.c.; handles up to 50 amperes.

Contained in cast housing  $6\frac{3}{8} \times 5\frac{5}{16} \times 3\frac{7}{8}$  inches with integral lugs for mounting on 4 by 4-inch centers.

Cover is fastened by 4 screws.

Standard package, 2.  
No. 1197.....each \$34.00

### Screen Booth Filters

For insertion in power supply line to shielded test rooms; these units provide wide-band attenuation ample to allow operation of sensitive, high-frequency apparatus in close proximity to electrical equipment of all types.

Welded steel housings have knock-outs for conduit at each end; threaded studs facilitate cable lug attachment.

#### Heavy Duty Filters

### Tobe Manufacturers' Type Filterettes

The Tobe "Filtered" Tag, which carries with it a consumer acceptance value, is made available to manufacturers.

Designed and engineered to suppress static caused by oil burners, barbers' clippers, ozonators, traffic signals, and a multitude of equipment and household appliances.

Graybar is prepared to facilitate solutions to all inquiries which may arise in connection with noise suppression.

## Tobe Filterettes

### No. 1218 For Portable Equipment

Used with office machines, large food mixers (commercial type), and light electro-medical equipment.

Operates on 125/250 volt a.c. or d.c. circuits at loads up to 10 amperes, over a frequency range of 300 kc. to 30 mc.

Has steel case  $8\frac{3}{8} \times 3\frac{5}{16} \times 1\frac{11}{16}$  inches.

Has 6-foot rubber insulated cord and standard two-contact receptacle; screw is provided for return connection to frame of noise maker.

Individually boxed and furnished in standard packages of 6.

No. 1218.....each \$12.50

### No. 1214 For Portable Equipment

Used with appliances driven by universal or d.c. motors, such as vacuum cleaners, hair dryers, sewing machines, food mixers, and cash registers. Most effective in the broadcast band and adjacent short-wave bands.

Operates on 125 volts a.c. or d.c. at current up to 15 amperes.

Plastic case is  $1\frac{1}{2} \times 2\frac{3}{8}$  inches.

Individually packaged and furnished in counter display boxes of 12 units. Weight each,  $2\frac{1}{2}$  ounces.

No. 1214.....each \$1.98

### No. 1215 For Electric Razors

Used with electric razors. Operates on 125 volts a.c. or d.c. at current up to 15 amperes.

Plastic case is  $1\frac{1}{2} \times 2\frac{3}{8}$  inches.

Individually packaged and furnished in counter display boxes of 12 units. Weight, each  $2\frac{1}{2}$  ounces.

No. 1215.....each \$1.98

### No. 1220 For Portable Equipment

Used with appliances of the series-motored or universal-motored type. Recommended when the nearest radio station is more than 100 miles away.

Operates on 125 volts, a.c. or d.c. at current up to 15 amperes.

Has steel case  $2\frac{1}{8} \times 2\frac{7}{8} \times 1\frac{1}{4}$  inches with strap bracket for mounting on  $3\frac{1}{16}$ -inch centers.

Furnished with 6-foot rubber-insulated cord and plug, and a two-contact receptacle.

Individually boxed and packaged in standard lots of 6.

No. 1220.....each \$5.50

## Type PRF Tobe Oil-Paper Capacitors

## For A.C. Service

No. PRF-3310

Designed for intermittent or continuous a.-c. service and for power factor correction. Oil-filled, oil-impregnated and furnished in hermetically sealed steel cases with solder lug terminals on a leak-proof insulator assembly.

In higher voltage ratings, the solder-lug terminals are provided with cup-type bushings for a longer leakage path.

Dependable service in ambient temperatures up to 75°C. is accomplished with stable capacitance and stable power factor.

Mounting provisions include the permanently attached base plate, designated by the suffix P to the type number; the hook hold-down bracket with spade lug, designated H; the flange type hook hold-down bracket, designated F; and the universal wrap-around (adjustable) bracket, designated U.

\*Cup bushings cannot be furnished.

## Tobe N-Erg-Y Capacitors

Designed for use with portable speed-flash units. Has high energy storage combined with compactness and light weight.

Dependability under diversified operating requirements suits all types of indoor and outdoor service in modern super-speed, photo-flash work.

Available in two ratings, 100 watt-seconds and 25 watt-seconds.

## 100 Watt-Seconds

Peak rating of 2500 volts d.c.; holds peak charge for approximately 24 hours.

Hermetically sealed steel case, cup-type phenolic bushings, heavy duty screw terminals for large cable connections to handle high instantaneous currents.

Negligible inductance and resistance in windings and connections allows high instantaneous current values up to 1250 amperes.

Has 10,000 charge-discharge cycles at peak rating.

Dimensions: height, 6 1/2 inches; and 3 3/4 x 4 5/8-inch base.

Weight, 6 1/2 pounds.

## 25 Watt-Seconds

Has same features as 100 watt seconds capacitor except height, 4 3/4 inches; and 3 3/4 x 2 1/2-inch base.

Weight, 2 1/2 pounds.

## Tobe A.C. Oil Type Motor Capacitors

Designed for long life under the stress of a.c. motor starting and power factor correction.

Non-inductively wound, mineral oil impregnated and filled. Has low power factor and high degree of stability as to all characteristics, at temperatures up to 85°C.

Non-removable solder-lug terminals are assembled to hermetically sealed cylindrical steel cases.

Mounting brackets can be furnished in flat or curved style.

## Type TRS Tobe Oil-Paper Capacitors

No. TRS-3004-U

For use in filter, transmitting, and timing circuits. Capable of withstanding transient voltages and temperatures encountered in such service.

For filter circuit applications, capacitor is rated in terms of R.M.S. voltage at the input to the rectifier.

Impregnated and filled with mineral oil. Is of non-inductive type. Hermetically sealed steel case of squeeze-seam construction can be furnished with permanently attached mounting feet,

hook hold-down brackets, or adjustable wrap-around brackets, all of which provide for upright or inverted mounting. Wrap-around bracket permits capacitor to be set into a sub-panel or chassis with terminals at any desired distance above mounting surface.

Terminal assemblies are of oil-tight construction with insulation adequate to rated voltage of capacitor. Heavy shakeproof type soldering lugs, assembled to terminal studs, will handle connecting wires in sizes up to No. 15. Terminals are white porcelain; washers, black bakelite.

Type numbers identify capacitor without mounting. For mounting feet, add P to type number; for hook type bracket add H; for universal wrap-around bracket, add U.

## Tobe Oil-Paper Capacitors

## Type RLO

Provides the convenient versatility of the bathtub design with the operating advantages of oil-impregnated and oil-filled construction.

Seamless, drawn case is hermetically sealed and is tinned for protection against corrosion. When specified, a lacquer finish can be furnished instead of tinning. Projecting ears on ends of case are provided for mounting.

Heavy, tinned copper soldering terminals, supported on molded phenolic insulators, can be located on the top, the bottom, or the side of the drawn metal case. The location of the terminals is indicated by suffix letters added to the type designations as follows: for terminals on the bottom, suffix L (example, RLO-L650); for terminals on the top the suffix is N; the basic type number RLO indicates terminals on the side of the case.

Characteristics of mineral oil used for impregnating and filling these capacitors are such that they can be used through a temperature range of minus 55° to plus 185°F.

## Tobe High Temperature Capacitors

Temperatures up to 135°C. are successfully withstood by this capacitor.

Meets particular service requirements.

Inquiries are solicited on specialized capacitor designs for laboratory, research, and industrial applications.

## Tobe Oil-Mites Oil-Paper Capacitors

Oil impregnated and filled.

Hermetically sealed in drawn metal cases.

Mineral oil impregnant affords stable capacitance and power factor from minus 55°F. to plus 185°F. with insulation resistance of 2000 megohms, or higher, and

dissipation factor below 0.008 (measured at 1000 cycles).

Furnished in any of three styles: without mounting brackets; with detachable hold-down bracket permitting either upright or inverted mounting; and with permanently attached flange-type mounting bracket soldered to the case for upright or inverted mounting, according to specifications.

When ordering, state mounting style required. On special order, the type and position of terminal lug can be varied.

Dimensions include thickness of bracket.

Flange mounting adds 1/32-inch to height and 1/16-inch to width; designate flange mount by prefix SPG in number (example SPG-1001 is 1 mfd. 1000 v. capacitor with flange mounting).

## Tobe Molded Oil-Paper Capacitors

Designed for use where the requirements are for minimum-size, easily installed capacitors capable of withstanding temperature and humidity beyond the usual limits for tubular by-pass capacitors.

Non-inductively wound, paper-dielectric sections are thoroughly vacuum-dried, impregnated with mineral oil, and molded in mica-filled phenolic housings.

Non-hygroscopic lacquer coating, applied to the completed capacitor, seals the phenolic and minimizes moisture absorption.

Suitable for use at radio frequencies up to 40 megacycles, for audio frequency by-pass service, and for use in filter circuits, these units have extremely low series resistance, high shunt resistance, and can carry relatively large R.R. currents. Compact, rectangular shape and light weight allows them to be mounted by connecting leads alone.

For applications under extreme humidity and tropical conditions, these capacitors can be furnished with a neoprene terminal seal, bonding the wire terminal leads to the phenolic case and assuring positive protection against moisture.

## Tobe Miniature Molded Oil-Paper Capacitors

Designed to meet requirements for miniature components to be used in hearing aids, pocket radio receivers, airborne radio apparatus, etc.

Paper-dielectric, oil-impregnated, and molded in phenolic cases, sealed to withstand 90 per cent relative humidity. Working temperatures from minus 55°C. to plus 65°C.; .001 mfd. and .005 mfd. ratings are available for plus 85°C service at additional cost.

Rated working voltage, 75 volts d.c.; capacitance tolerance, plus 60 per cent, minus 20 per cent.

## Western Electric Transmitters

No. 405 B-2

The Western Electric line of broadcasting transmitters includes units for standard AM service and FM service.

### For Standard AM Service:

No. 451A-1.....	250 Watts
No. 442A-1.....	500 Watts
No. 443A-1.....	1000 Watts
No. 405B-2.....	5000 Watts
No. 407A-1.....	50000 Watts

### For FM Service:

No. 501 C-2.....	250 Watts
No. 503B-2.....	1000 Watts
No. 504B-2.....	3000 Watts
No. 506B-2.....	10000 Watts
No. 507B-2.....	50000 Watts

## Western Electric 2A Phase Monitors

No. 451A-1

Designed for measuring the phase and amplitude relations of the currents in the antenna elements of directional arrays, so that these relations can be correlated with the field pattern.

The 2A Phase Monitor consists principally of: two meters for indicating relative amplitudes of tower current; a phase-measuring condenser and its associated circuit; an amplifier detector circuit for obtaining an indication of balance; and a self-contained power supply.

**Frequency Range:** 540 to 1600 kilocycles.

**Phase Angle Range:** 0 to 360°.

**Rated Frequency Input Power:** minimum 1/2-watt.

**Power Supply:** 105-125 volts, 40 to 60 cycles.

**Power Consumption:** 40 watts.

**Dimensions:** 16x19x8 inches.

**Weight,** 43 pounds.

No. 503B-2

**Western Electric No. 506B-2 Transmitters**

10,000 Watts  
For FM Service

**Western Electric**

No. 54A  
Clover-Leaf  
FM Antenna

For Broadcasting

**Western Electric No. 101A Antenna Coupling Equipment**

Designed to match the impedance of a base insulated antenna having a resistance of not less than 15 ohms and a reactance of not more than 650 ohms, to the characteristic impedance of a concentric transmission line from a transmitter having a rated output power of 5 kilowatts or less at radio frequencies between 540 and 1600 kilocycles.

Series-excited antenna.

Cabinet is an all-weather metal type. Dimensions: 46 inches high; 36 inches wide; and 33 inches deep. Shipping weight, 600 pounds.

**Blaw-Knox Towers**

A complete broadcast tower line available in the following types:

- Types CH and CN vertical AM radiators;
- Types CFN and CFH for combination FM-AM radiators;
- Types N16, N28, H21, and H40 for FM antenna support, all self-supporting;
- Types SGN, DGN, SGH, and DGH guyed towers for FM, AM, and FM-AM combination.

**No. 54A Clover-Leaf FM Broadcast Antenna**

Designed to radiate horizontally polarized radio waves and to concentrate this radiated energy in a service area surrounding the transmitting station. Engineered for frequency modulation broadcast stations operating at carrier frequencies between 88 and 108 megacycles and at power levels up to and including 50 kilowatts. The antenna, providing a power gain of 1.3 to 4.7, comprises an array of two or more vertically stacked radiating units. Each radiating unit is composed of a cluster of four curved elements which, in plan view, forms a symmetrical shape similar to a four-leaf clover.

## Western Electric No. 22D Portable Speech Input Equipment

A compact system, light in weight and designed to provide complete pick-up facilities both for established remote and for on-the-spot broadcasts.

Consists of a combination amplifier and control unit with a carrying case and a second carrying case for either a power unit for a.c. operation or a battery holder for battery operation, or both, as specified.

No. 22D includes a four channel parallel mixing circuit for operation with 30-ohm dynamic microphones or other sources of comparable impedance.

Master gain control, indirectly illuminated volume indicator, binding posts for two-program lines, jacks for two monitoring headsets, and both binding posts and a jack for an order wire telephone set are furnished.

**Frequency Response:** uniform within  $\pm 1$  decibel from 30 to 10,000 cycles.

**Source Impedance:** 30 ohms, nominal.

**Load Impedance:** 150 or 600 ohms.

**Gain:** maximum, 92 decibels; typical operating, 70 decibels.

**Maximum Output:** +18 dbm. with less than 1 per cent harmonic distortion.

**Power Supply:** a.c. operation, 110-120 volts, 50-60 cycles; power consumption is 28 watts at 115 volts; battery operation, filament 1.6 amperes at 6 volts and plate 21 milliamperes at 180 volts.

**Dimensions:** each case, approximately 14x17x8 inches.

**Weight:** complete, 50 to 60 pounds.

## Western Electric No. 1304A and No. 1304B Reproducer Sets

An electrical transcription and disc record reproducing unit for professional use in broadcasting and sound system installations.

Modern styling, harmonizes with modern studio units. Quiet, dependable, trouble free, powerful drive mechanism. Standard 16-inch diameter record platter, felt surfaced. Interchangeable center pins for outside record center holes. Speed selection of either 33 $\frac{1}{3}$  or 78 rpm. by operating an electrical switch.

Flutter (including wow) less than 1 per cent at 33 $\frac{1}{3}$  or 78 rpm. Total playing time variation over 15 minute program at 33 $\frac{1}{3}$  or 78 rpm.,  $\pm 4.5$  seconds, (platter speed constant within  $\pm 5$  per cent.)

Turntable has built-in isolation to eliminate motor and building vibrations as a factor in operation. No rubber-tired or rim-drive wheels to flatten or wear out. Ample proportioning of power transmission mechanism. Rapid starting, from standstill to full constant speed in approximately  $\frac{1}{2}$  revolution at 33 $\frac{1}{3}$  rpm. and 1 $\frac{1}{2}$  revolutions at 78 rpm. Operates on 115-volt ( $\pm 5$  per cent), 60 cycles a.c. Motor and drive pulley replaceable for application with other than 115-volt, 60 cycle a.c. power.

Lubrication and inspection accomplished by removing the turntable platter.

## Western Electric Type 109 Reproducer Groups

For faithful reproduction of both vertical and lateral cut disc type recordings. Meets the requirements of radio broadcasting and high quality sound distribution systems.

**No. 109AA Reproducer Group** consists of: No. 9A reproducer, No. 5A reproducer arm, No. KS-13386 equalizer and cable assembly, No. 171A repeating coil, and No. 711A bracket.

**No. 109B Reproducer Group** consists of: No. 9B reproducer, No. 5A reproducer arm, No. KS-13386 equalizer and cable assembly, No. 171A repeating coil, and No. 711A bracket.

Nos. 9A and 9B reproducers differ only in stylus tip radius and material. Either plays vertical or lateral records but No. 9A favors vertical and No. 9B lateral reproduction.

## Western Electric No. 120C Pre-Mixing Amplifiers

Designed to fulfill requirements as a pre-mixing or booster amplifier and for use in no gain bridging amplifier circuits. A compact, two-stage, 44-decibel gain amplifier unit having excellent frequency response, low distortion, and a balanced input transformer with an electrostatic shield and extra electromagnetic shielding.

Resistors in cathode circuits are provided to permit checking the currents of the tubes by means of a Western Electric No. KS-10003 type or equivalent meter.

**Frequency Response:** flat within  $\pm 1$  decibel over the range 50 to 15,000 cycles, from nominal impedances.

**Source Impedance:** 30 or 250 ohms, nominal.

**Load Impedance:** 600 ohms.

**Gain:** 44 decibels.

## Transmission Lines

Graybar distributes Communication Products Aircore concentric transmission lines and fittings in sizes from  $\frac{1}{4}$ -inch to 6 $\frac{1}{2}$  inches to meet all requirements for standard and FM broadcast as well as dehydrators and line maintenance accessories.

## Western Electric

### No. 5A Frequency and Modulation Monitors

The Western Electric 5A Frequency and Modulation Monitor for FM broadcast-stations fulfills all the F.C.C. and RMA requirements by a good margin, and incorporates many features which extend its usefulness.

## Western Electric No. 25B Speech Input Equipment

A complete a.c. operated broadcast studio console-type program production unit for the amplification, control, and monitoring of programs originated by microphones, transcriptions, remote lines or equivalent sources.

Has two main program channels capable of simultaneous operation on separate programs without interference, plus a monitor amplifier for loud-speaker monitoring and cueing operations.

Terminals are provided for eight microphone or low level transcription input circuits and switching keys are included for selection of either of two low level inputs for each of four pre-amplifiers.

Three additional simultaneous microphone inputs can be had by using the line mixers and external amplifiers.

Consists of five principal units: the desk style No. 40A Console Control Unit, the No. KS-10284 Table, a compact No. 12A Power Supply, and two flush type wall junction boxes (Nos. 7A and 7B).

**Frequency Response:**  $\pm \frac{1}{2}$  decibel, 50 to 15,000 cycles.

**Source Impedance:**

Microphone Inputs, 30, 250, or 600 ohms, nominal; Line Inputs, 600 ohms; Utility Inputs, 600 ohms; Air cue Inputs, 600 ohms.

**Load Impedance:**

Line Output, 600 ohms; Addition Output, 600 ohms; Monitor-Amplifier Outputs, furnished adjusted for loud-speaker impedances of 3 to 10 ohms (may be reconnected to impedances 1 to 1200 ohms).

**Maximum Output Power:**

+18 dbm., allows 10 decibel margin for peak factor above +8 vu. which is the normal program output for the equipment.

**Power Source:** 105-125 volts, 50 to 60 cycles a.c., approximately 225 watts.

**Dimensions:** Console, 36x55x28 inches; Power Supply, 16 $\frac{1}{2}$ x28x10 inches; Junction Boxes, 18x20x4 inches.

## Western Electric Custom-Built Consoles

Western Electric Custom-Built Consoles, engineered to customer's requirements, are noted for their versatility, utility, and attractive appearance.

They are designed to have uniform frequency response, inherently low distortion level, and low noise level, all better than the limits set by the FCC for the highest quality AM and FM broadcasting.

Each installation incorporates standard Western Electric components combined into circuit arrangements and cabinet designs to meet individual requirements.

## Western Electric Type 132 Main Amplifiers

**No. 132A Main Amplifier** is a compact, two-stage main amplifier for feeding normally equalized transmission lines or master switching circuits, with adequate power to handle

program bus systems or studio auditioning facilities. Operates from an external power supply, and is suited for desk or rack mounting. Resistors in cathode circuits permit tube checks.

**No. 132B Amplifier** is essentially the same as No. 132A except that it has 50 decibel gain, a balanced input transformer with an electrostatic shield and an extra electromagnetic shield. The nominal source impedances for No. 132B are 30 and 250 ohms.

**Frequency Response:** No. 132A, uniform within 1 decibel over the range 50 to 15,000 cycles, nominal impedances.

**Source Impedances:** No. 132A, 30 or 250 or 600 ohms, nominal.

**Load Impedance:** No. 132A, 600 ohms.

**Maximum Gain:** No. 132A, 48 decibels.

**Output Power:** No. 132A, +29 dbm. with 1 per cent total harmonic distortion at 400 cycles; +27 dbm. at 50 to 7500 cycles.

**Western Electric No. 133A Line Amplifiers**

A multi-purpose unit of the two-stage, push-pull type, with stabilized feedback.

Can be used as a line amplifier, an isolation amplifier, a general monitor amplifier.

Has sufficient power for many line and studio loud-speaker applications.

Incorporates an output transformer with taps, which will satisfactorily feed circuit impedances over a range from 1 to 1200 ohms. Resistors in cathode circuits permit easy tube checks with a Western Electric No. KS-10003 meter or equivalent.

**Frequency Response:** uniform within  $\pm 1$  decibel over the range 50 to 15,000 cycles, from nominal impedances.

**Source Impedance:** nominal, 600 ohms for matching, 600 ohms circuit for bridging (input impedance approximately 20,000 ohms for bridging).

**Load Impedance:** tapped transformer for operation into 1 to 1,200 ohms load.

**Gain:** 47 decibels with 600-ohm source input; 21.5 decibels when bridged on 600-ohm circuit.

**Maximum Output Power:** 4 watts (+36 dbm.) with 1 per cent harmonics, 50 to 7500 cycles; 8 watts (+39 dbm.) with 2 per cent harmonics, 50 to 7500 cycles.

**Western Electric No. 20B Rectifiers**

A full-wave vacuum tube rectifier incorporating a vacuum tube voltage regulating circuit.

Has negligible internal impedance which minimizes coupling between amplifiers due to the use of a common plate supply source.

**Input:** 100-130 volts, 50 to 60 cycles; power consumption, 196 watts, 1.7 amperes for rated load.

**Output:** rated load, plate supply 110 milliamperes at 275 volts d.c.; and filament supply, 10 amperes at 6.3 volts a.c.

Designed to mount on standard 19-inch relay rack or cabinet.

**Western Electric No. 124F Monitor and Talkback Amplifiers**

For speech input or sound systems.

Combines monitoring facilities, heretofore requiring two amplifiers, into a single, high quality, three-stage unit.

Incorporates two separate input circuits, offering the control engineer a means of feeding program to booth and studio loudspeakers, as well as cue-feeding to remote lines either from low level sources (microphones and reproducers) or from line or bus level sources.

The low level circuit is designed to permit talkback and cue to performers in an associated studio.

Each of the two input circuits provides a margin of gain adequate to satisfy all requirements for its particular type of service.

Separate gain controls are supplied which, in case of the low level input, may be duplicated at a remote point, if desired, as a measure of operating convenience.

Connected for an output power of 12 watts, normally considered ample for most monitoring conditions. If more than one loudspeaker is to be driven, however, or if a high volume level is required, 20 watts can be made available by a simple change in the wiring connections and using Western Electric tubes.

Tapes are provided in the output transformer which can be adjusted for operation into impedances ranging from 1 to

1200 ohms, so that a wide variety of loud speaker combinations can be matched in impedance without loss of power or introduction of harmonics.

**Frequency Response:** uniform within  $\pm 1$  decibel over the range 50 to 15,000 cycles with microphone input.

**Source Impedance:** Line input, 600 ohms or bridging; low level input, 15 to 250 ohms.

**Load Impedance:** 1 to 1200 ohms.

**Gain:** line input, 60 decibels maximum (600-ohm matching connection); 47 decibels maximum (20,000-ohm bridging connection); low level input, 104 decibels maximum.

**Gain Control:** line input, 20 decibels in 1 decibel steps, with off position; low level input, 35 decibels continuously adjustable with off position; (low level control on d.c. bias basis; either or both gain controls can be located remotely from amplifier).

**Output Power:** 12 watts (+41 dbm.) as shipped; 20 watts (+43 dbm.) available.

**Power Supply:** 105-125 volts, 50-60 cycles, 1.25 amperes, 125 watts.

**Dimensions:** height, 7 inches; width, 19 inches; depth, 7 inches.

## Western Electric No. 633A Dynamic Microphones

Designed for radio broadcasting, public address, announcing, and sound distribution systems.

For use with equipment nominally rated for 25 to 50 ohms source impedance.

Features ruggedness, dependability, high quality and either non-directional or semi-directional performance.

## Western Electric No. 640AA Microphones

In the broadcasting field, associated with its companion No. RA-1095 (single stage) Amplifier, the No. 640AA assures ultra-faithful sound pick-up.

Operates into high impedance grid circuit of closely associated vacuum tube amplifier

(such as Western Electric No. RA-1095 Amplifier).

Polarizing voltage, 200 volts, d.c., from well-regulated noise-free supply.

Mounted in structure containing first amplifier stage.

Dimensions: cylindrical shape, approximately 1x1 inches.

Weight, 1½ ounces.

## Western Electric Type 639 Microphones

Pre-eminent in the field of sound pick-up because of its high quality and cardoid directivity.

Excellent for broadcast and public address use, not only as all-purpose microphone but also as the solution to many difficult pick-up problems.

A combination of a dynamic moving coil type pressure element and an improved ribbon type velocity-actuated element enclosed in an attractive housing.

When these elements are combined equally, the directional characteristic is the heart-shaped cardoid curve C. Use of each element alone presents patterns D (dynamic), circular and R (ribbon), 8.

These characteristics are available with No. 639A or No. 639B. Additional patterns are available with No. 639B.

## Western Electric No. 141A Amplifiers

A three-stage pre-amplifier for use with basic (Nos. 142A and 143A) amplifiers and other amplifier combinations in public address and sound distribution systems. Meets requirements of R.M.A.

One No. 141A may be mounted on and arranged to derive its necessary power supplies from one of the basic amplifier units. Dimensions: 4½x5¼x5 inches.

**Frequency Response:** ±1 decibel from 35 to 15,000 cycles, from nominal impedance.

**Source Impedance:** 30, 250, and 600 ohms, nominal.

**Load Impedance:** any impedance above 600 ohms.

**Gain:** step control 40, 50, 60, and 70 decibels into 600-ohm load.

**Maximum Output Power:** +20 dbm., 50 to 7500 cycles, for 6000-ohm load.

**Power Required:** 0.9-amp. at 6.3 v.; 15 ma. at 250 v.

## Western Electric No. 1140A Amplifiers

A three-stage, push-pull a.c.-d.c. amplifier with stabilized feedback for use in wired program service, but suitable for all applications where a moderate output power a.c.-d.c. amplifier is desired. Input circuit is for direct connection to telephone lines where local telephone company practices permit.

Consists of the No. 140 Amplifier and the No. KS-13678 Cabinet.

**Frequency Response:** ±1 decibel, 50 to 10,000 cycles, from nominal impedances; ±2 decibels, 50 to 15,000 cycles, from nominal impedances.

**Source Impedance:** nominal, 150 to 600 ohms.

**Load Impedance:** 2 to 1500 ohms.

**Maximum Gain:** approximately 60 decibels.

**Output Power:** d.c. operation, 6 watts maximum; a.c. operation, 10 watts maximum; harmonic distortion, less than 5 per cent.

**Power Supply:** a.c. or d.c., 105 to 125 volts.

Dimensions: approximately 13x8x9 inches. Finish: chassis, gray enamel; cabinet, light aluminum gray.

## Western Electric Nos. 142A and 143A Amplifiers

Basic, self-contained power amplifier units arranged for rack or cabinet mounting for fixed or portable use. Meets the requirements of the R.M.A.

**Frequency Response:** ±1 decibel, 35 to 15,000 cycles, with high source impedance arranged to work into grid circuits.

**Load Impedance:** 2 to 24 ohms.

**Speaker Distribution Line:** 70 volts.

**Input Volts for Full Output:** basic chassis, 1 volt.

**Power Supply:** 110-120 volts, 50-60 cycles, a.c.

No. 143A

with less than 5 per cent harmonic distortion using Western Electric No. 350B tubes, 12 w. with No. 6L6 tubes; No. 143A, 75w., 50-7500 cy., with less than 5 per cent harmonic distortion, using Western Electric No. 350B tubes, 50 w. with No. 6L6 tubes.

No. 142A

**Maximum Gain:** basic chassis with No. 116B Pre-Amplifier, 105 decibels; basic chassis with No. 141A Pre-Amplifier, 115 decibels; basic chassis with line transformer, 40 decibels bridging, 63 decibels high gain.

**Maximum Output Power:** No. 142A, 25w., 50-7500 cy.,

## Western Electric Nos. 124J and 124H Amplifiers

No. 124J

**No. 124J** makes use of the basic No. 124 Amplifier type of chassis and is arranged for single-channel operation. Equipped with an input transformer suitable for operation from telephone lines. Arranged for cabinet instead of relay rack mounting. Has its input and output connections brought out to screw terminals on the rear side wall of the chassis. Power is brought in through an attached cord and plug.

## Western Electric No. 757A Loudspeakers

Designed for highest quality public address and music reproduction systems and for wired program service, and for radio broadcast monitoring applications.

A two-band speaker consisting of a No. 728B Loudspeaker, No. 713C Receiver, No. KS-12027 Horn, and a No. 700A Attenuator, and a No. 702 Network mounted in a plain box.

**Frequency Range:** 60 to 15,000 cycles.

**Impedance:** 4 ohms.

**Power Capacity:** 25 watts.

**Angle of Distribution:** 90° horizontal, 90° vertical.

**Dimensions:** box, 20x30½x13¾ inches.

## Western Electric No. 728B Loudspeakers

Intended for high quality reproduction of sound in applications such as radio monitoring of speech and music, public address systems, and radio broadcast receivers.

It is a single, direct radiator type of loudspeaker.

**Nominal Frequency Response:** 60 to 8,000 cycles with a gradual roll-off to 10 decibels down at 10,000 cycles.

**Power Capacity:** 30 watts.

**Impedance:** 4 ohms.

Optimum enclosure, 3 cubic feet.

**Dimensions,** approximately 13x4 inches.

**Weight,** 17 pounds.

**No. 124H** is very similar to No. 124J except that it is arranged for two-channel operation; that is, a microphone channel is provided in addition to the line channel on the No. 124J. It differs from the No. 124J in the following respects: the microphone channel is obtained by adding a No. 116B amplifier and its associated control; a line-mike switch is provided for selection of either the microphone channel or the line channel.

## Western Electric No. 720A Receivers

Permanent magnetic type used with the Western Electric No. 31A Horn for announcing and public address systems.

With the No. 31A Horn and No. 27A Receiver Attachment, the frequency range is 300 to 6500 cycles.

Has a phenolic diaphragm and a voice coil impedance of approximately 8 ohms and is capable, when used with a suitable horn, of handling peak powers up to 30 watts over the frequency range from 150 to 6500 cycles.

## Western Electric No. 755A Loudspeakers

Designed for a variety of applications in wired program service, public address systems, radio broadcast receivers, and radio monitoring.

A single, direct radiator type loudspeaker.

**Frequency Response:** 70 to 13,000 cycles.

**Impedance:** 4 ohms.

**Power Capacity:** 8 watts maximum.

Optimum enclosure, 2 cubic feet.

**Dimensions,** 8¾x3½ inches.

**Weight,** 4¾ pounds.

## Western Electric No. 1126C Program Operated Level Governing Amplifiers

A program operated level governing amplifier containing automatic means to reduce its gain almost instantaneously when the input level reaches a predetermined amount and to restore the gain at an adjustable rate as the input level falls below that amount.

Consists of a No. 126C three-stage, push-pull amplifier; No. 298A Control Panel; No. 20B Rectifier; and is designed to reduce excessive peaks, protecting against over-modulation in AM. Also protects against over-swing in FM; also against instantaneous overload and consequent distortion in other transmission systems.

Has an extremely short attack time.

The self-contained, automatically regulated power supply stabilizes the operation of the amplifier over a wide range of power supply conditions.

Flexible in installation due to separability of three units.

**Frequency Response:** uniform within  $\pm 1$  decibel over the range 50 to 15,000 cycles, from nominal impedance.

**Source Impedance:** 600 ohms, nominal.

**Load Impedance:** 600 ohms.

**Maximum Gain:** 53.5 decibel maximum with all input and output fixed attenuators omitted (37 decibels as shipped with 10 decibel input and 6.5 decibel output attenuators connected) when working from 600 ohms and into 600 ohms, both adjustable attenuators at zero.

**Output Power:** +17 dbm. single frequency (as shipped and with adjustable output attenuator at zero) when gain reduction starts (+23.5 dbm., maximum, with all output fixed attenuators omitted).

**Power Supply:** 105-125 volts, 0.7 ampere, 50-60 cycles, a.c.

## Western Electric No. 540A Radio Transmitting Equipment

For use as fixed station in mobile radio telephone service, 250 watts output.

## Western Electric Railroad Radio Telephone Communications

Loudspeaker and Handset Mounted in the Cab of a Diesel Locomotive

A mobile, phase-modulated radio telephone equipment designed specifically for railroad application.

Operating in the 152-162 megacycle frequency band, it provides telephone quality two-way communication for end to end of train, train to train, and fixed point to train service.

Designed for quick switching between any four frequencies located within one megacycle band.

## Western Electric Type 238 Mobile Radio Telephones

Type 238 System, featuring phase modulation and direct crystal control, is for mobile radio telephone communication in the 152-162 megacycle band. Available in two models: No. 238B for operation from a six-volt power supply; No. 238 C for operation from a twelve-volt power supply.

Adaptable for use in boats in nearby waters. Also used in urban areas.

Consists of Nos. 38B or 38C Transmitter, No. 38A Receiver, and No. 41A Control Unit, and associated antenna and accessories.

## GE Industrial Type Electronic Tubes

On this page and the next is found technical information and prices as of July 1, 1947 on a wide variety of General Electric tubes for industrial use. Any of Graybar's office and warehouse locations can furnish additional information, delivery available, and up-to-date price information (see back of catalog). Many of these tubes are carried in stock.

\*Inert gas-filled, and the temperature ratings are expressed in terms of the ambient temperature range over which the tubes will operate.

†For voltages of 600 volts rms. and below. Ignitor requirements are 200 volts and 30 amperes.

‡Requirements are 75–125 volts, 15–20 amperes; minimum, 150 volts, 40 amperes. §Quadrature operation.

## Thor Champion 1/4-Inch Portable Electric Drills

### Light Duty

Universal Motor—110 Volts—25 to 60 Cy.—Sgl. Ph.—A.C. or D.C.

For intermittent service. Ideal for maintenance work, automotive repair, electrical installation, plumbing, radio, cabinet work, and similar applications in wood or metal.

Capacity, 1/4-inch.

Oilite, self-lubricating bearings; special, alloy steel gears. Field case, handle and gear case are made of die-cast, aluminum alloy.

Free speed, 2000 rpm.

Standard equipment: 1/4-inch 3-jaw Jacobs chuck and key. Closed grip handle with recessed, thumb-control switch. 3-conductor cable with ground wire and plug.

Length, 11 3/4 inches.

Also available for 32, 220, 250 and special voltages.

Net weight, 4 pounds. Shipping weight, 6 pounds.

Each, Specify Voltage..... \$22.95

## 1/4-Inch Thor Portable Electric Drills

Universal Motor, A.C. or D.C.—For 110 Volts

A streamlined, ball bearing, lightweight drill. Heat treated alloy steel gears, extra long carbon brushes. Equipped with 3-jaw Jacobs chuck and key; 3-conductor cable with ground wire and plug. Standard voltage, 110; 220 and special voltages available if specified.

### U14AP Series—Standard Duty

Available in four speeds for general use in maintenance and production service. Pistol grip handle, plunger switch.

No.	Each	Free Speed RPM.	Overall Length Inches	Wt. Lb.
U13AP	\$43.50	3750	7 3/4	3
U14AP	35.50	2500	7 3/4	3
U14DP	35.50	1900	7 3/4	3
U17AP	43.50	700	9	3 3/4

### U14F Series—Heavy Duty

Pistol grip handle trigger switch. Add letter S to No. for side handle with trigger switch.

U12F	\$43.50	3750	8 5/16	3 3/4
U13F	43.50	5000	8 5/16	3 3/4
U14F	42.00	2500	8 3/4	3 7/8

All UFS series drills are \$43.00

## No. UKD 1/4-Inch Heavy Duty Thor Portable Electric Drills

Universal Motor, A.C. and D.C.—For 110 Volts

Designed for heavy duty service up to its rated capacity in production work. Armature revolves on ball bearings. Nickel-chromium, alloy steel reduction gears.

Tangential ventilation keeps motor running cool.

Free speed, 1400 rpm. Length, 12 1/2 inches.

Standard equipment: 3-jaw Jacobs chuck and key, 3-conductor cable with ground wire and plug, closed grip handle.

Net weight, 5 1/2 pounds; shipping weight, 9 pounds.

No. UKD, Specify Voltage..... each \$41.00

Also available for 32, 220 or 250 volts, as specified.

## Thor 1/4-Inch Thorite Plastic Portable Electric Drills

### Heavy Duty—Ball Bearing

Universal Motor—110 Volts—25 or 60 Cycles—A.C. or D.C.

A light, sturdy, durable drill with housing, field case, gear case and grip handle made of tough, specially developed Thorite plastic, a nonconductor. The operating parts are encased within an inner skeleton metal frame, plastic housing serves as a protective shell. Great protection from shock, cool-running and easy to service. Internal parts are metal mounted.

Equipped with 3-jaw Jacobs chuck and key, 3-conductor cable with ground wire and attachment plug, pistol grip handle with trigger switch.

Weight, 3 1/4 pounds. Shipping weight, 5 pounds.

No.	U14K	U12K	U13K
Each	\$42.00	43.50	43.50
Free Speed	2500 rpm.	3750	5000

## No. UAD Thor 5/16-In. Portable Electric Drills

### Heavy Duty—Ball Bearing

Universal Motor—110 Volts, 25 to 60 Cycles, A.C. or D.C.

For production drilling in wood or metal. Fully balanced. Also used for repair service in garages, and for general maintenance work.

Standard equipment includes 3-jaw Jacobs chuck and key, 3-conductor cable with ground wire

and plug, and closed grip handle with momentary trigger switch.

Also available in 32, 220 and 250 volts; specify voltage.

No.	UAD
Each	\$55.00
Free Speed	1700 rpm.
Length	13 3/8 inches
Net Weight	7 1/2 pounds
Shipping Weight	12 pounds

## No. UBD Thor 3/8-In. Portable Electric Drills

### Heavy Duty—Ball Bearing

Universal Motor—110 Volts, 25 to 60 Cycles, A.C. or D.C.

Used mainly in industrial plants and shops where it is necessary to drill all sizes of holes up to and including 3/8-inch.

Standard equipment includes 3-jaw Jacobs chuck and key, 3-conductor cable with ground wire

and plug, and closed grip handle with momentary trigger switch. Optional equipment includes a side switch at no extra charge; for side switch specify No. UBB.

Also available in 32, 220 and 250 volts; specify voltage.

No.	UBD
Each	\$59.50
Free Speed	750 rpm.
Length	14 1/8 inches
Net Weight	8 3/4 pounds
Shipping Weight	13 pounds

## No. DMG Thor 1/2-Inch Portable Electric Drills

Universal Motor, A.C. and D.C.—For 110 Volts, 25-60 Cycles

For repair and construction work on the farm and in the home.

Can be used for wire brush work, buffing, polishing, carbon cleaning, rotary filing, and hole sawing (up to 3 inches).

Capacity in steel, 1/2 inch.

Capacity in wood, 1 inch.

Housings are heavy die-cast aluminum.

Triple-insulated motor has great overload capacity.

Bearings are permanently lubricated.

No load speed, 420 rpm. Overall length, 15 inches.

Standard equipment: Jacobs chuck with key, momentary switch with locking pin for continuous operation, side handle, closed grip handle and auxiliary handle, three-conductor cable (with ground wire), and a two-prong plug.

Weight, 9 1/2 pounds.

No. DMG.....each \$39.50

## No. DMG-5 Thor Drill Press Stands

For No. DMG Portable Electric Drill

Converts Thor No. DMG portable electric drill into a powerful drill press.

Sturdy bracket locks the tool in place quickly for stationary use.

Six-to-one leverage builds up great pressures.

Carefully machined parts assure accuracy.

Vertical movement, 7 inches.

Vertical adjustment, 12 1/2 inches.

Bench space required, 8 1/2 x 13 inches.

Weight, 40 pounds.

No. DMG-5.....each \$26.25

## Thor Champion 1/2-Inch Portable Electric Drills

Light Duty

Universal Motor—110 Volts—25 to 60 Cy.—Sgl. Ph.—A.C. or D.C.

For intermittent work in all-around shop service and occasional light production work. Also used for driving hole saws, wood augers, etc.

Capacity, 1/2-inch.

Self-lubricating bearings; special, alloy steel gears. Die-cast aluminum alloy housing.

Free speed, 420 rpm.

Standard equipment: 1/2-inch 3-jaw Jacobs chuck with key.

Spade handle with chuck key holder. Trigger switch, side-handle with locking pin. Removable dead handle. 3-conductor cable with ground wire and plug.

Length, 15 inches.

Also available for 32, 220, 250 and special voltages.

Net weight, 9 1/2 pounds. Shipping weight, 15 pounds.

Each, Specify Voltage.....\$39.50

## No. U44 1/2-Inch Heavy Duty Thor Portable Electric Drills

Universal Motor A.C. or D.C.—For 110 Volts, 25 to 60 Cy., Sgl. Ph.

Capacity, 1/2-inch. For continuous service on high production jobs.

Helical, alloy steel gears, insulated armature, ball bearings.

Free speed, 500 rpm.

Length, 12 inches.

Standard equipment:

1/2-inch 3-jaw Jacobs chuck and key, horizontal spade handle, side handle with lever switch which can be locked, 3-conductor cable with ground wire and plug. Detachable dead handle.

Optional equipment: No. 1 or No. 2 Morse Taper

socket instead of chuck, if specified.

Also available for 32, 220, 250 and special voltages.

Net weight, 9 1/2 pounds; shipping weight, 13 pounds.

No. U44, Specify Voltage.....each \$64.50

## No. UDA 1/2-Inch Heavy Duty Thor Electric Drills

Universal Motor, A.C. and D.C.—For 110 Volts

For deep drilling where great power and strength are required.

Equipped with Jacobs chuck, spade handle, side switch handle and dead handle. Feed screw may be substituted for space handle if desired.

Free speed 500 r.p.m. Overall length, 16 1/2 inches.

Weight 21 pounds.

Also available in 220 and special voltages if desired.

No. UDA, Specify Voltage.....each \$79.50

## Thor 5/8-Inch Portable Electric Drills Ball Bearing

Universal Motor, A.C. or D.C.—For 110 Volts, 25 to 60 Cy., Sgl. Ph.  
**No. UDC, Standard Duty.** For ordinary heavy duty drilling. Free speed, 600 rpm. Length, 16½ inches.

**No. UEN, Heavy Duty.** For extra heavy duty drilling, reaming, and wood boring. Free speed, 400 rpm. Lgth., 16¾ in. Capacity 5/8-inch. Gears of nickel-chromium alloy steel, heat treated, Housing of heavy section aluminum castings.

Standard equipment: Side handle with off-and-on switch, spade and dead handle, 3-conductor cable with ground wire and plug. No. UDC with 3-jaw Jacobs chuck and key; No. UEN with No. 2 Morse Taper socket or 5/8-inch Jacobs chuck, as specified. Optional feed screw instead of standard spade handle, if specified.

Also available for 32, 220, 250 and special voltages. Specify voltage.

Net weight, 22¼ pounds. Shipping weight, 30 pounds.

No. UDC, Std. Duty...each \$87.00  
No. UEN, Hvy. Duty...each 93.00

## Thor 3/4-Inch Heavy Duty Portable Electric Drills

Universal Motor, A.C. and D.C.  
For 110 Volts, 25 to 60 Cy., Sgl. Ph.

Std. equip.: Spade and dead handles, 3/4-inch Jacobs chuck, 3-conductor cable with ground wire and plug. No. UES, with side handle with on-and-off switch; No. UFH, with side handle with momentary switch. Ball bearing on spindle. Optional: No. 2 Morse Taper socket can be furnished instead of Jacobs chuck. Feed screw can be substituted for spade handle.

## No. U3Z 1¼-Inch Thor Portable Electric Drills

Universal Motor, A.C. or D.C.—  
For 110 Volts, 25 to 60 Cycles—  
Single Phase

Capacity: drilling, 1¼ inches; reaming, 1½ inch. Has safety-type, quick-acting lever-switch. Free speed, 350 rpm. Length, 19⅞ inches. Standard equipment: Thor quick-acting safety-switch; feed screw; dead handle; No. 3 internal Morse taper socket and knock-out pin. Spade handle can be supplied in place of feed screw. Net weight, 49½ pounds; ship. wt., 71 lb. No. U3Z, Specify Voltage...each \$200.00

Available for 32, 220, 250, and special voltages on request. Furnished at speed of 500 rpm. at no extra cost.

## Thor Electric Drill Stands

No. 8

No. 26

Quickly converts a portable electric drill to stationary service not requiring the extreme sensitivity of the drill press. Has six to one leverage which permits tremendous pressure on the work.

Stand constructed so drill is accurately and securely arranged with minimum effort and held square and rigid.

**No. 8** accommodates drills of capacities 5/16 to 1/2 inch.

**No. 26** and **No. 30** accommodate drills of capacities 1/2 to 1 inch. When ordering, specify for what size tool.

## No. UBG-D Heavy Duty Thor Portable Electric Combination Screwdrivers and Drills

Universal Motor, A.C. and D.C.—For 110 Volts, 25 to 60 Cycles, Single Phase

Capacity: up to No. 16 wood screws; up to 5/16-inch machine screws and nuts; and 3/8-inch drilling. Aluminum alloy casing. Ball bearings.

Free speed, 750 rpm. Length overall, 15¼ inches.

Equipped with 3-conductor cable with ground wire and plug, three bits or one socket wrench shank with socket, 3/8-inch Jacobs chuck and adaptor, positive clutch, nut or screw driving attachment, and closed grip handle with momentary trigger switch.

Weight, 9½ pounds.  
No. UBG-D. Complete, Specify Voltage.....each \$94.00

Also available for 32, 220, 250, and special voltages.

**1<sup>3</sup>/<sub>16</sub>-Inch Thor Portable Electric Screwdrivers**

Universal Motor  
A.C. or D.C.—  
For 110 Volts,  
25 to 60 Cycles

For small screws and nuts in cabinet work, airplane assembly, etc. Capacity: up to No. 8 wood screw and <sup>3</sup>/<sub>16</sub>-inch machine screw or nut. Higher speed Nos. ULN and ULT are used for machine screws; slower speed No. ULP is ordinarily preferred for wood screws.

Equipped with Thor double slip clutch attachment.

**No. UBG <sup>5</sup>/<sub>16</sub>-Inch Heavy Duty Thor Portable Electric Screwdrivers**

Universal Motor A.C. and D.C.— For 110 Volts, 25 to 60 Cycles, Single Phase

Capacity: up to No. 16 wood screws; and up to <sup>5</sup>/<sub>16</sub>-inch machine screws and nuts. Aluminum alloy casing. Ball bearings on spindle.

Free speed, 750 rpm. Length overall, 14<sup>1</sup>/<sub>16</sub> inches. Equipped with 3-conductor cable, 3 screwdriver bits, closed grip handle with momentary trigger switch, and positive clutch attachment. Weight, 8<sup>1</sup>/<sub>2</sub> pounds.

No. UBG, Complete, Specify Voltage.....each \$82.50  
No. UBGR, Reversible, Specify Voltage.....each \$8.25

Also available for 32, 220, 250, and special voltages.

**Thor Universal Portable Electric Tappers Heavy Duty—Ball Bearing**

Universal Motor—110 Volts—25 to 60 Cy.—Sgl. Phase—A.C. or D.C.

Adapted to tapping thread holes in metal. Equipped with automatic reversing mechanism which backs tap out of the threaded hole quickly. A slight pull on the tool disengages the forward action and throws it into reverse motion.

No. UKS,  
with Plunger Switch

No. UBR,  
with Momentary Trigger Switch

Powered for continuous production service. Tangential ventilation insures cool running.

Reinforced casings. Armature revolves on oversize, precision ball bearings; long, bronze sleeve bearings support reducing gear shafts and spindle, with heavy ball bearing for spindle end thrust. Nickel-chromium, alloy steel reducing gears, heat treated.

STANDARD EQUIPMENT: Jacobs chuck and key, 3-conductor cable with ground wire and plug. Closed grip handle with on-and-off plunger switch. No. UBR has dead handle and momentary trigger switch.

**No. U19CP Thor Heavy Duty Portable Electric Screwdrivers and Nut Setters**

Universal Motor, A.C. and D.C.—For 110 Volts, 25 to 60 Cy., Sgl. Ph.

Capacity: wood screw from No. 4 to No. 12, and machine screws and nuts up to <sup>1</sup>/<sub>4</sub>-inch. Die-cast aluminum alloy casing.

Equipped with trigger momentary type switch which can be locked for continuous operation. Right angle, one hand operation. Ball bearings on spindle.

Free speed, 600 rpm. Length, 13<sup>1</sup>/<sub>4</sub> inches.

Standard equipment: 3-conductor cable with ground wire and plug, slip clutch attachment, screwdriver bits and one finder as specified. Optional: Standard length socket wrench shank and socket wrench in place of screwdriver bits and finder, if specified. Can also be furnished with positive clutch attachment.

Net weight, 6 pounds.

No. U19CP, Specify Voltage.....each \$110.00

**No. UKP Thor Portable Electric Screwdrivers and Nut Setters**

Universal Motor, A.C. and D.C.—For 110 V., 25 to 60 Cy.; Sgl. Ph.

Capacity: No. 12 wood screws, and machine screws and nuts up to <sup>1</sup>/<sub>4</sub> inch. For production service.

Reducing gears are of nickel-chromium alloy steel, heat-treated. Aluminum housing. Free speed, 400 rpm. Length, 15<sup>5</sup>/<sub>16</sub> inches.

Standard equipment: 3-conductor cable with ground wire and plug; double slip clutch attachment with 3 screwdriver bits and one finder, as specified. Closed grip handle with thumb operated plunger switch. Optional: bonnet cap, for close-quarter operations; standard length socket wrench shank with socket wrench in place of bits and finder.

Also available for 32, 220, 250 and special voltages.

Net weight, 6<sup>1</sup>/<sub>2</sub> pounds; shipping weight, 10 pounds.

No. UKP, Specify Voltage.....each \$78.00

## No. UBGN 1/4-Inch Thor Portable Electric Nut Setters

Universal Motor, A.C. and D.C.—For 110 V., 25 to 60 Cy., Sgl. Ph.  
For continuous production work. Free speed, 750 rpm. Length overall, 17 5/16 inches. From side of case to center of spindle, 1 1/16 inches.

Equipped with 3-conductor cable with ground wire and plug, closed grip handle with momentary trigger switch, No. 140 kick-out clutch attachment, and one standard length socket wrench shank with one square or hex socket wrench.

Weight, 11 3/4 pounds.  
No. UBGN.....each \$96.50  
No. UBGNR, Reversible.....each 102.25  
Also available for 32, 220, 250 and special voltages.

## No. UEH 1/2-Inch Thor Portable Electric Nut Setters

Universal Motor, A.C. and D.C.—For 110 V., 25 to 60 Cy., Sgl. Ph.

Free speed, 550 rpm. Length overall, 17 1/2 inches.

Equipped with 3-conductor cable with ground wire and plug, side handle with off-and-on plunger switch, suspension cap and hook, dead handle, No. 141 kick-out attachment, and one standard length socket shank with socket wrench in size specified.

Also available in 32, 220, 250 and special voltages.

Weight, 23 1/4 pounds.

No. UEH.....each \$155.00

## No. UEG 1/2-Inch Heavy Duty Thor Portable Electric Nut Setters

Universal Motor, A.C. and D.C.—For 110 Volts, 25 to 60 Cycles

Used where constant severe service is required.

Length overall, 15 inches.

Furnished with a suspension cap and hook, dead handle. Equipped with a side switch and a No. A136 positive attachment. Free speed, 550 rpm.

Weight, 23 pounds.

No. UEG, Specify Voltage

.....each \$138.00

Available in 32, 220, 250 and special voltages upon request.

## 7-Inch Thor Electric Polishers

Universal Motor, A.C. and D.C.—For 110 Volts

A lightweight, perfectly balanced and easily handled polisher.

Armature and spindle run in ball bearings. Alloy

steel heat treated gears. Easily taken apart for cleaning by removing brush covers. Handle can be used on either side of machine. Equipped with one 7-inch flexible rubber pad; one 7-inch felt pad and one 8-inch sheep wool pad.

No. ....	U38	U70
Each.....	\$65.00	83.00
Free Speed.....rpm.	1950	2300
Length Overall.....inches	13 3/4	16 3/4
Weight.....pounds	7 3/4	16 1/2

Also available for 32, 220 or 250 volts, as specified.

## No. U58 Thor 7-Inch Standard Duty Portable Electric Sanders

Universal Motor, A.C. and D.C.—For 110 Volts  
25 to 60 Cycles, Single Phase

For sanding, grinding, cleaning, and preparing automobile bodies and fenders for paint jobs.

Armature and spindle run in ball bearings. Spiral bevel gears of alloy steel, heat-treated. Inspection of motor can be made while sander is running by removing 2 brush covers. Side handle can be used on either side of machine.

Free speed, 3800 rpm. Length, 14 1/2 inches.

Equipped with 7-inch flexible rubber pad and a box of 3 assorted abrasive discs.

No. U58, Shipping Weight, 14 Pounds.....each \$55.00  
Also available for 32, 220, 250 or special voltages as specified.

## Heavy Duty Thor Electric Sanders

Universal Motor, A.C. and D.C.—For 110 Volts

For sanding, grinding, cleaning, etc.

Side handle can be used on either side of machine.

Each tool equipped with 3 abrasive discs, ground wire, rubber pad, and straight switch handle.

Speed, 4000 rpm. Length 16 1/2 inches.

Shipping weight, 24 pounds.

No. ....	U68	U69
Each.....	\$80.00	85.00
Discs, Capacity.....inches	7	9

Also available for 32, 220, 250 or special voltages as specified.

U68 furnished equipped with cone-shaped cup wheel 6x2x 1/8-inch hole by specifying U67. U67 comes with adjustable wheel guard, if desired.

## Thor Portable Electric Grinders

Universal Motor, A.C. and D.C.—For 110 Volts, 25 to 60 Cycles  
Single Phase

Has heat-treated, alloy steel, spiral helical gears, shock absorber spindle. Armature and spindle have large over-size ball bearings.

Outer end of spindle support has labyrinth grease seal reinforced

with steel hub at wheel guard. Furnished with ground wire, wheel guard and 10 feet of cable. Width of wheel, 3/4 inch. Spindle thread, 1/2-inch x 13; spindle offset, 1 inch. Length, 19 1/2 inches. Shipping weight, 18 pounds.

No. ....	U54	U55
With Grinding Wheel.....each	\$69.00	90.00
Wheel Capacity.....inches	4	5
Free Speed.....rpm.	6000	4500

Also available for 32, 220 or 250 volts. Specify voltage.

## No. U60 Thor Portable Electric Grinders

Universal Motor, A.C. and D.C.—For 110 Volts

Equipped with super-power motor, special heat-treated gears, large ball bearings. Carries a 6x1-inch wheel. Furnished with straight switch handle and grinding wheel and guard. Spindle thread 5/8x11 inches.

No. U60.....each	\$112.00
No Load Speed.....rpm.	4000
Length Overall.....inches	26 3/8
Weight.....pounds	21 1/8

Also available for 220, 250 or special voltages as specified.

**Thor Electric Grinders****Bench Type**

For 110 or 220 Volts—3450 RPM.

For all-around service in grinding, buffing and wire wheel work.

Has a cool, quiet running, completely enclosed motor dynamically balanced for vibrationless operation. All ball bearings are over-size and dust-tight; require only annual greasing attention.

All sizes provided with freely adjustable tool rests and furnished with extra heavy wheel guards; those on 220-volt sizes are enclosed type with exhaust chute and tapered end bells to permit grinding on both sides of wheel.

**No. B6GS Thor 6-Inch Bench Grinders**

Universal Motor, A.C. and D.C.—For 110 Volts, 50 or 60 Cycles

For sharpening tools and implements, and removing and cutting off metal.

Equipped with two grinding wheels, one coarse grit for fast roughing, and one fine grit for smooth finish.

Wheel diameter, 6 inches. Wheel width, ¾ inch. Wheel bore, ½ inch.

Long wheel-spindle and tapered end bells permit handling odd-shaped pieces.

Standard equipment: wheelguards, adjustable tool rests, off-on toggle switch, three-conductor cable (with ground wire), and a two-prong plug.

Full load speed, 3450 rpm.

No. B6GS, Weight, 52 pounds.....each \$49.50

**No. U100 1-Inch Heavy Duty Thor Portable Electric Hammers**

Universal Motor, A.C. and D.C.—For 110 or 220 Volts

Capacity in concrete up to 1-inch Star drill; 1600 blows per minute. Length overall, 13½ inches. Equipment includes ¾-inch Star drill, turning handle, ejector pin, dust shield, carrying

case, 3-conductor cable with ground wire and molded rubber plug, momentary grip switch with lock.

Net weight, 14 lb.; shipping weight with case, 32 lb.

No. U100, Complete, Specify Voltage.....each \$145.00

**No. U1N Thor Portable Electric Nibblers**

Universal Motor, A.C. or D.C.—For 110 Volts, 25 to 60 Cycles, Single Phase

For cutting sheet metal and tubing. By cutting its own clearance, it cuts corrugated and curved sheets without distortion.

Capacity: No. 20 gage (.035") in sheet metal, and No. 16 gage (.065") in aluminum. Yoke type front head. Aluminum alloy casing.

Overall length, 9 inches. Diameter of body, 2½ inches.

Weight, 3¾ pounds.

No. U1N, Complete, Specify Voltage.....each \$69.00

Also available for 32, 220, 250, and special voltages.

**Ideal Hand Type Cleaners**

1½-Hp. Universal Motor, A.C. and D.C., 115 Volts

A powerful lightweight cleaner designed to blow, vacuum, spray, or dry better and faster. High velocity discharge blasts dust and dirt from dangerous electrical installations and inaccessible places. Blows large volumes of dry air at low pressure per-

mitting cleaning of motor windings or delicate machinery without damage; vacuums those hard to clean places; sprays insecticides, paints, varnish, deodorants; dries paint, varnish, ink, etc. Can be used continuously for production drying. Cleaner has continuous duty universal motor with sealed precision ball bearings; no oiling or lubrication required. Has plug in for new detachable heater nozzle. Can be used with all Ideal cleaning attachments.

## Thor Saw Blades

To provide long life and most economical service saw blades are made of correct gage to hold set; teeth of blades are properly shaped for different types of work intended; and metal is correctly and uniformly tempered and tensioned. High quality of steel blades means satisfaction to users of Thor saws.

## Combination

Designed for all around work; suitable for ripping or cross-cutting.

Blade No.	Each	Diameter Inches	Thor Saw Size
73862	\$3.45	5 $\frac{7}{8}$	1, 1A
73863	3.75	6 $\frac{1}{4}$	6"
73875	4.10	7 $\frac{1}{4}$	7", 2A
73880	4.60	8	3
73881	4.95	8 $\frac{1}{4}$	8", 3A
73889	5.40	8 $\frac{15}{16}$	4, 4A
73894	5.80	9 $\frac{7}{8}$	5
73899	6.95	11 $\frac{7}{8}$	6, 6A, PS-12

## Cutoff

For all types of cross-cut work.

Blade No.	Each	Diameter Inches	Thor Saw Size
73864	\$3.45	5 $\frac{7}{8}$	1, 1A
73865	3.75	6 $\frac{1}{4}$	6"
73876	4.10	7 $\frac{1}{4}$	7", 2A
73882	4.60	8	3
73883	4.95	8 $\frac{1}{4}$	8", 3A
73890	5.40	8 $\frac{15}{16}$	4, 4A
73895	5.80	9 $\frac{7}{8}$	5
73900	6.95	11 $\frac{7}{8}$	6, 6A, PS-12

## Fine Tooth

Light gage, thin blade and is fitted with very small teeth. Used primarily for cutting Celotex or similar soft wallboard.

Blade No.	Each	Diameter Inches	Thor Saw Size
73868	\$3.80	5 $\frac{7}{8}$	1, 1A
73869	3.90	6 $\frac{1}{4}$	6"
73879	4.10	7	7", 2, 2A
73887	4.60	8	8", 3, 3A
73893	5.80	8 $\frac{15}{16}$	4, 4A, 5, 6, 6A, PS-12

## Friction

A shallow notched steel disc for cutting by friction or burning, light gage flat or corrugated sheets of iron.

Blade No.	Each	Diameter Inches	Thor Saw Size
73870	\$7.60	5 $\frac{7}{8}$	6", 1, 1A
73871	8.00	6 $\frac{1}{4}$	7", 2A
73884	10.55	8	8", 3, 3A, 4, 4A

## Mitre

For very smooth cutting. Ideal for interior finish. Hollow ground.

Blade No.	Each	Diameter Inches	Thor Saw Size
73866	\$6.30	5 $\frac{7}{8}$	1, 1A
73867	6.50	6 $\frac{1}{4}$	6"
73877	7.25	7 $\frac{1}{4}$	7", 2A
73885	7.95	8	8", 3, 3A
73891	9.25	8 $\frac{15}{16}$	4, 4A
73896	10.05	9 $\frac{7}{8}$	5, 6, 6A, PS-12

## Rip

This is the fastest cutting blade for rough work, rip or cutoff. If rip cuts are to be made with Models

Blade No.	Each	Diameter Inches	Thor Saw Size
73898	\$5.80	9 $\frac{7}{8}$	5
73901	6.95	11 $\frac{7}{8}$	6, 6A, PS-12

These blades will fit new and old Thor Saws as indicated. Only saws now in production are new Thor Electric Saws, designated 6", 7" and 8" and the PS-12 pneumatic saw.

## No. G12001-1 Casco Electri-Craft Hand Power Tool Kits

A.C. and D.C.—For 115 Volts, 60 Cycles

EXCLUSIVE FINGER GRIP

A complete, portable power workshop all in one kit.

For fine work or roughing when used by electrical maintenance men, laboratory workers, pattern makers, tool makers, model makers, and hobbyists.

Used for hundreds of operations in tool and model rooms and for exact work in metal, plastic wood, and glass.

Balanced for vibrationless operation. High speed (20,000 rpm.) motor is seated at all critical points on a light, sturdy aluminum frame for rigidity with a shockproof, plastic motor case for lightness.

Cooled by forced ventilation. Has high grade, self-oiled bearings and special finger grip for exact manipulation.

Chest is made of steel, walnut finished, with snap catch and lock with key. Metal tool tray is removable.

Lower compartment will hold materials and other tools.

Chest dimensions: width, 13 $\frac{1}{2}$  inches; depth, 6 inches; height, 4 $\frac{1}{2}$  inches.

Packed 3 kits to a carton. Ship. wt., approx. 14 lb.

## Accessories

One  $\frac{3}{32}$ -inch collet, one  $\frac{1}{8}$ -inch collet, wrench, six mounted grinding stones, 3 drills, 3 steel cutters, saw, 5 mandrels, 5 abrasion discs, felt buffer wheel, 3 rubber-bonded polishing wheels, 3 brushes, crimped wire cleaning and etching brush, dressing stone, and a muslin buffer.

No. G12001-1 .....per kit .....

## Fire Extinguishers

Approved by Underwriters' Laboratories and Factory Mutuals

**Pyrene Vaporizing Liquid**  
1 and 1½-Quart Pump Type

Smothers all classes of incipient fire, particularly fires in flammable liquids and electrical equipment. Light, compact, and easily operated. Double acting pump. Discharges a steady 25 to 30 foot stream from any position. Vehicle type has shock absorber construction and clamp brackets for wall or steering post. Also available with chromium or painted finishes. Also approved by Good Housekeeping Institute. Liquid is a non-conductor of electricity, non-corrosive, anti-freezing to 50° below zero F. Sold with charge and bracket.

C 21

S 13

**Pyrene Soda-Acid**  
2½-Gal. Seamless and Riveted Types

Inverted, it discharges a 40-foot stream, effective on fires in wood, paper, textiles, etc. The Four-Star Drawn Shell type has patented press assembled collar and seamless dome and shell of one-piece copper. Strong and durable, tested to 500 pounds pressure.

The standard riveted shell type, at lower cost, has shell, dome and bottom of cold-rolled copper with seams backed with solder. Tested to 350 pounds pressure.

Chromium and painted finishes available. Must be discharged and recharged annually. High grade charges are full weight, accurately proportioned.

No. S13, 4-Star Seamless, Polished Copper.....	\$34.00
No. SX13, Riveted Shell, Standard Finish.....	30.00
If above supplied with relief valve, add \$2.00 to price.	
No. SXR1, 2½-Gallon Recharge.....	\$6.00

**40-Gallon on Wheels**

Narrow and wide gage.

**Pyrene Vaporizing Liquid**  
2-Quart and 1-Gallon Pressure Type

For industrial and vehicular protection against flammable liquid and electrical fires, and incipient fires in ordinary combustibles. Discharge 30 to 40-foot stream without pumping. Inner chamber holds air under pressure; outer contains Pyrene Liquid. Air pressure gauge and liquid level sight glass make inspection easy. Equipped with flexible metal, rubber-covered hose. Available with or without built-in air pump.

**Pyrene Foam****2½-Gal. Seamless and Riveted Types**

Discharges 22 gal. of foam that floats on flammable liquids, clings to solids and smothers the fire. The Four Star Drawn Shell type has one-piece shell and dome and solderless collar. Tested to 500 pounds pressure.

Standard riveted shell type available at lower cost. Tested to 350 pounds pressure.

Both seamless and riveted types are also available with chromium and painted finishes. Must be discharged and recharged annually, using only the specially compounded and accurately proportioned Pyrene Foam recharges.

P 13

**Pyrene Water-Type****2½-Gallon Cartridge-Operated**

Kills fire in ordinary combustibles by discharging a 40-foot stream of plain water—without pumping or chemicals—by means of pressure from a carbon dioxide gas cartridge. Operated by inverting and striking the plunger head on the floor. Annual recharging is not required. After use, refill with water; replace cartridge.

The Pyrene Anti-Freeze type is for ordinary hazards at freezing locations. Pyrene Freeze-Proof is anti-freezing to 40° below zero Fahrenheit. Both are also available in painted and chromium finishes.

PSH-15

## Cordley Electric Water Coolers

Equipped with non-rusting water system. Non-ferrous storage tanks and tubing are used throughout.

Complies with the requirements of U.S. National Bureau of Standards, CS127-45.

Has durable satiny neutral-tone, gray finish on heavy sheet furniture steel.

All cabinet panels are removable for easy access to mechanism.

## Model HCS-10

A single-bubbler cooler with a hermetically sealed compressor unit.

Gooseneck filler is optional.

Cools up to 17 gallons per hour depending upon room and inlet water temperatures.

Precooling system uses waste water to cool incoming water to save electric current.

Available for 115-volt, 60 cycle power supply only.

Model CS-10 is identical except equipped with open-type compressor unit and is available for any a.c. or d.c. power supply.

## Model CS-20

A two-bubbler cooler with extra (11½-gallon) storage reserve capable of handling heavy traffic or peak loads.

Gooseneck filler is optional.

Cools up to 33 gallons per hour.

Has open-type compressor unit and is available for any a.c. or d.c. power supply.

Model RCS-20 is similar except is equipped with two push-back glass fillers for restaurant or cafeteria service.

## Model FCS-3

A bottled water cooler for moderate or small groups in offices, stores and other installations where traffic is relatively light.

No plumbing connections are required.

Accommodates any standard 3 or 5-gallon water bottle.

Has open-type compressor unit and is available for any a.c. or d.c. power supply.

## Cory Commercial Electric Coffee Brewers

With ½ Gallon Decanters

Five Burner Unit

## No. C122W 2-Burner Warming Units

Designed as auxiliary equipment with low heat only (80 watts). Safeguards against overheating coffee. Chrome finish.

Furnished with two decanters and one spare lower bowl.

No. C122W, Warming Unit Only, Wt., 7¾ Lb. each \$18.25

No. 140, Warming Unit with Two No. CD2G Decanters, Wt., 14 Pounds. each 26.15

No. 143, Warming Unit with Two No. CDM Decanters, Wt., 14 Pounds. each 27.00

## No. C122E 2-Burner

Has two heats (660-80 watts); a high heat for brewing and a low heat for keeping coffee at a serving temperature. Capacity, 80 cups per hour.

Furnished with two complete Cory brewers, extra filter cloths, funnel holder, coffee measure and spare glass, and one lower bowl.

Stove dimensions, 8x14½x4½ inches. Chrome finish.

No. C122E, Stove Only, Weight, 7¾ Pounds. each \$20.10

No. 240, No. C122E Stove with No. C2G Glassware, Weight, 19¼ Pounds. each 33.00

No. 243, No. C122E Stove with No. CMG Glassware, Weight, 19¾ Pounds. each 34.25

## No. C123E 3-Burner

Two burners give high and low heat and one burner gives low heat only.

Capacity, 100 cups per hour.

Furnished with two complete Cory brewers, one serving decanter, extra filter cloths, funnel holder, coffee measure and spare glass, and one spare upper and lower bowl.

Low heat burner is protected by a stainless steel shield.

Stove dimensions, 8x22x4½ inches. Chrome finish.

No. C123E, Stove Only, Weight, 11 Pounds. each \$29.45

No. 340, No. C123E Stove with No. C2G Glassware, Weight, 25¼ Pounds. each 47.80

No. 343, No. C123E Stove with No. CMG Glassware, Weight, 26 Pounds. each 49.60

## No. C125H 5-Burner Step-Up

The two upper burners are Cory Speed-Ray closed elements with both high and low heats (660-80 watts).

Special cooling area between two upper burners provides auxiliary space for working convenience.

The three front burners give low heat only (80 watts) with elements protected by stainless steel covers.

Capacity, 140 cups per hour.

Furnished with two complete Cory brewers, three serving decanters, extra filter cloths, funnel holder, coffee measure and spare glass, and one upper and one lower bowl.

Stove dimensions, 16x22x7½ inches. Chrome finish.

No. C125H, Stove Only, Weight, 23 Pounds. each \$68.35

No. 540H, No. C125H Stove with No. C2G Glassware, Weight, 41 Pounds. each 92.60

No. 543H, No. C125H Stove with No. CMG Glassware, Weight, 42 Pounds. each 95.00

Federal Manufacturer's Excise Tax to be added to prices.

## Fresh'nd-Aire Circulators

Fresh'nd-Aire circulator, successor to the fan, provides scientific overall no-draft air circulation for every requirement. It moves great volumes of air quietly, evenly—gives relief from the dulling effects of dead, stuffy air. In industry

it reduces fatigue, increases efficiency—brings higher production rates. For commercial establishments Fresh'nd-Aire brings added customer comfort—increases restaurant or store traffic.

Fresh'nd-Aire speed control, an exclusive feature, shows instantly on a visual dial the speed being used. Just a flick of the switch does it. Smaller models have three speeds—larger models have five speeds plus on and off switch.

Speed Control

Low Stand Model

Low stand model has sturdy carrying handle. Base becomes wall mounting if desired. Becomes high stand model by simple addition of sub-base and tubing.

Fresh'nd-Aire mountings are adjustable to any position, horizontally or vertically. Low stand base becomes attractive wall mounting.

## Commercial Fans

For Offices, Banks, Stores, and Institutions

**Desk Type**  
Available in Various Sizes  
and Types, Oscillating  
and Non-Oscillating

**Ceiling Type**  
Available in Several Sizes  
and Types for  
Various Applications

Available in Several Sizes

**Floor Type**

Graybar distributes a complete line of desk, floor, wall and ceiling fans for office, store and institutional use. At the time this catalog went to press it was impossible to get complete data on the new items available. Therefore, we are merely showing three typical fans of current style—desk, ceiling and floor—and suggesting that when you need fan information you write or call our nearest office and warehouse (see list at back of catalog). They will be glad to send you complete information, prices and delivery information.

Ask Your Nearby Graybar Office and Warehouse for the Latest Fan Information

## No. 428 Ilg-Rollaire Cooling Fans

Portable—High Volume

220 Volts, 1 Phase

A plug-in unit mounted on rubber casters, for the night air cooling of small homes and apartments. Expels hot air and draws in cool air. Inside temperatures drop from 5° to 20° as an Ilg-Rollaire fan is placed at one window, and other windows and doors are opened to make possible a complete air change. Casters lock in position.

Fan height is adjustable from 41 to 56 inches from floor to center of wheel.

Has a fine mesh safety guard, 25 inches in diameter.

Air capacity, 2600-1950 cfm. Air capacity carries a certified A.S.H.V.E. rating.

Rpm., 1140-855; 220 watts.

Direct connection of motor and fan eliminates friction and noise.

Rpm., 1140-855; 220 watts.

Direct connection of motor and fan eliminates friction and noise.

Fan is completely finished in bright chromium and is equipped with 20 feet of rubber covered cord and plug.

Shipping weight, 110 pound.

No. 428.....each \$180.18

## Ilg Portable Floor Fans

For industrial air cooling. Discharges large volumes of air at high velocity. Propeller has 4 blades of cast aluminum protected by guards. Cast iron base.

The 12-inch fan is equipped with cord and plug; larger models with standard enclosed switch.

**No. BM388 Ilg Filter Type Ilgairator Window Ventilators**

This is an electric fan and air filter unit that can be used with any sliding sash window for supplying fresh, filtered air to a room. Dust, soot, and plant pollens are filtered out of the air with over 98% efficiency.

The air volume is controlled by a regulator on the front panel. The No-Draft grille may be revolved to deflect the air in any direction.

The attractive cabinet is made of furniture steel and finished in natural walnut grain or rich ivory. Six adjustable panel widths are furnished for various window widths. The installation does not interfere with opening, closing or locking window. Filter is replaceable; a new cartridge is easily inserted.

With all necessary accessories including rubber covered cord and plug; operates from any electric light socket.

Single phase, 60 cycles, 110 volts.

Air capacity, 250 cfm. Speed, 1550 rpm. Watts, 40.

Also available for d.c. Prices on application.

**Ilg Electric Propeller Fans****Selecting the Correct Size of Ilg Self-Cooled Motor Propeller Fan**

The air change required in a room differs with the conditions found therein. The worse the air conditions, the faster the air should be changed; restaurants for instance need a more rapid air change than do offices. Air conditions in a given type of building are fairly uniform and it is possible to generalize on the rate of air change advocated for various classes of buildings. Note the listing below.

**Air Changes**

Class of Buildings	Air Should be Changed
Restaurant and Hotel Kitchens....	Every 1 to 2 Minutes
Offices and Stores, Depending on the Climate.....	Every 2 to 5 Minutes
Workrooms and Factories.....	Every 5 to 10 Minutes
Residence Kitchens.....	Every 1 to 2 Minutes
Garages.....	Every 5 to 10 Minutes
Theatres.....	Every 2 to 5 Minutes
Halls.....	Every 5 Minutes
Laundries.....	Every 2 to 5 Minutes
Farm Barns.....	Every 10 Minutes
Attic Cooling.....	Every 2 minutes on floor beneath attic

**Self-Cooled Motor**

The ingenious, exclusive self-cooling features of the Ilg ventilating fan motor combines the low operating cost of the open motor with the protection of the fully enclosed motor.

The Ilg self-cooled motor is an open motor, protected and enclosed by a metal hood. The fan action draws clean air through the vent-pipe from the outside, circulates it through the motor and exhausts it. The motor stays clean, stays cool; no foul air reaches it.

The value of this self-cooling feature is reflected in lower operating costs, quieter operation and longer service life.

**Slow Speed—Quietness—Long Life**

This motor propeller fan is made to operate efficiently at low speeds, from the 8-inch Ilg vent running at 1550 r.p.m. to the 72-inch Ilg fan at 315 r.p.m.; slow speeds characterize the Ilg line. Slow speeds permit quiet operation, smoother, effortless running, less vibration and bearing wear. Many an Ilg self-cooled motor propeller fan is as good as new after years of service. Slow speed is the answer.

**Two Fans in One**

The Ilg self-cooled motor propeller fan for single phase operation is equipped with two speed controllers. In effect, this gives the user two fans for the price of one; at top speed a reasonably quiet ventilator for peak loads, and for hot weather duty; at low speed, a fan which is noiseless, ready for cold weather ventilation duty. Here is year round use, top capacity, silent operation, and flexibility of performance, all in one fan.

**Improved Balanced Wheel**

Slow speeds are possible because of the improved Ilg bucket type fan wheel. The deeply cupped blades scoop up the air, working efficiently at low speeds. Dynamic balancing on a costly machine makes the Ilg fan wheel quiet, vibration-free for life.

## Ilg Self-Cooled Electric Propeller Fans

Constructed with patented Ilg enclosed self-cooled motor which affords the low operating cost of the open motor with the protection of a fully enclosed motor.

Fan action draws clean air through vent pipe in the bottom of the fan from out-of-doors, circulates it through the motor and exhausts it.

Motor stays cool and clean and uses less power.

Ratings are certified to be in accordance with the A.S.H. & V.E.

## Ilg Automatic Shutters

Fan Running

Fan Not Running

These shutters are used on the outside of propeller fans to protect the fan when not running and also to keep out the wind, rain, snow and cold.

Ilg Automatic Shutters are built of special hard rolled aluminum leaves, pressed on Whiting Alloy copper coated rods supported in cast frame.

When fan is running, the shutter is held open by the force of the air current. When fan is shut off, the shutter closes automatically by gravity.

Shutters are moisture proof and need no attention after they are installed.

Size of shutter corresponds to size of fan.

Motor operated shutters available at extra cost.

### 1lg Built-In Kitchen Ventilators

For New or Renovated Homes

1lgette

1lgvent

This unit becomes an integral, permanent part of the building wall. Simple, easy to install by contractor.

One piece weather-tight door on outside of house is opened or closed by beaded pull chain, simultaneously causing fan motor to start or stop. Keeps out insects and cold air when fan is not operating.

Operates smoothly and freely. Fan wheel is accurately balanced and allowance is made for minute variations in paint coverage. Rugged framework keeps moving parts aligned, assures a solid, permanent installation.

Telescopic cabinets made of 16-gage rust-resisting steel permit depth adjustment for different wall thicknesses.

Ventilators for a.c. operation have shaded pole type motors free from radio interference.

**1lgvent**—For small kitchens. Standard sleeve fits wall from 5¾ to 8½ inches or from 8½ to 13 inches: sleeve to fit 5¾ to 8½-inch wall shipped unless otherwise specified. Units with special sleeves available at \$2.05 extra for following wall thickness: 13 to 22-inch walls or 22 to 31-inch walls.

French gray cabinet, with polished aluminum grille.

**1lgette**—For medium-size kitchens. Self-cooled motor. Standard sleeve fits wall from 8½ to 13 inches. Units with special sleeves available at \$2.05 extra for following wall thickness: 12 to 16-inch walls: 16 to 20-inch walls: and 20 to 24-inch walls.

**1lgair**—For larger kitchens. Self cooled motor. Cabinet has fixed depth of 8½ inches. Baked ivory enamel finish.

**Automatic 1lgette**—Equipped with an auxiliary self cooled small motor in place of pull chain and can be operated by an electrical wall switch.

### 1lg Portable Kitchen Ventilators

For Rented Homes or Apartments

Also for installations where wall space or room arrangement does not permit use of a built-in ventilator.

Fits any ordinary window, requiring only four screws.

Mounted on window frame, back of sash, permitting

window to be locked, opened or closed.  
Fan mounted in all-steel ivory finish adjustable panel.  
Furnished complete with 10-foot cord, switch plug and sash lifting handles.

Standard panel width 26 to 36 inches, and 36 to 46 inches.

### 1lg Kitchen Ventilating Fans

Package Type—For Window Pane Installations  
Listed by Underwriters' Laboratories, Inc.

Permanently installs in steel sash window, with unit replacing one pane of glass.

Can also be used in double hung windows with wood or metal mullions around panels.

Beaded pull chain opens and closes weather-tight outer door, simultaneously starting and stopping fan operation.

1lgvent is for small, compact kitchens; 1lgette for medium size or average kitchens.

Finished in ivory.

**No. 6S Ilg Utility Blowers****Motor Driven****110 Volts—60 Cycles—Single Phase—A.C.—3400 RPM.**

Suitable for building into apparatus which requires ventilation or air movement. Unit can be supplied with or without stand, inlet flange or outlet flange.

Housing, stand and flanges are of die-stamped steel. Wheel is a zinc die casting, dynamically balanced for supremely quiet, highly efficient operation and is mounted on the motor shaft. Direct connection of motor and wheel makes possible an extremely

compact arrangement for engineering into a product.

Sleeve bearing type motor, series wound.

Furnished complete with short length of cord brought out of motor for making connections.

**Ilg Penthouses for Power Roof Ventilators**

Penthouse is used with an Ilg self-cooled motor propeller fan for use as a power roof ventilator. The penthouse is thoroughly weathertight in every respect. It is solidly constructed of rust resisting steel. The automatic shutter is standard equipment on the penthouse to protect the fan from the weather when it is not in operation. A door in the back of the penthouse which has provision for a lock furnishes easy access to the fan for periodic lubrication.

Available with insulated lining for use where condensation of moisture during the cold weather is a problem.

Furnished complete with shutter, no fan.

**Type P Ilg Volume Blowers**

Designed to handle small quantities of air. The housing is of heavy cast iron; the wheel is of cast aluminum.

Either ceiling or wall type. Quickly fitted into any one of four different discharges.

Particularly useful for exhausting fumes from chemical laboratories. Can also be used for handling light dust from polishing wheels and grinders and is suitable for any small exhaust purpose where a considerable amount of resistance is caused by a long run of

small duct. The No. 7 1/2 P blower at 3400 rpm. can be satisfactorily used on single-fire blacksmith forges.

**Ilg Variable Air Controllers****For Type B and Type BW Universal Blowers**

This controller is a shutter-like mechanism consisting of a bank of vanes connected together and operated by a quadrant control handle. Fastened to the discharge of the blower and operated either manually or indirectly by Ilg electric remote control.

Permits the use of a constant speed, squirrel cage motor direct-connected to the blower. Advantages of this combination as compared to a variable motor speed are an actual saving in power with an improved power factor, simplicity of operation, compactness and sturdy dependable construction. Remote control is accomplished by electrical operation of the vanes, by means of a small motor operated by a switch station located at any desired point. A transformer is used to reduce the motor operating voltage to that which does not require elaborate conduit service.

Remote Control, \$105.00 extra.

### Type BW 1½g Universal Blowers For Belt Drive

Sides of housing are of cast iron and the cast iron bearing bracket is recessed in the sheet metal bowl in blower's side. The multiblade wheel is overhung on the shaft which runs on ball bearings in cast iron bracket. This two bearing construction makes possible a completely unobstructed inlet. Special Whiting ribbon steel blades of wheel have slight forward curve developing high air volume at low tip speeds and against comparatively high static pressures. Blades are spot welded to rims, and rim and blade assembly mounted on cast iron spider.

Ball bearings make these blowers suitable for any installation requiring quietness. Bearings are oversized and grease lubricated.

Angle of discharge and direction of rotation can be changed at any time. Available in single width single inlet, and double width double inlet types.

### Type B 1½g Volume Blowers Gasoline Engine Driven

Driven by a direct connected 4-cycle gasoline engine, blower is for ventilating where electricity is not available. Manholes, vats, tanks and other places can be ventilated with this portable blower which is complete-

ly self-contained. Canvas hose is ordinarily used to convey the fresh air from blower to spot requiring ventilation.

The blower inlet is screened to prevent paper, leaves, etc. from entering. The outlet is fitted with a flange to accommodate a canvas hose. No batteries or other connections are required. Canvas hose not included.

No.	Each	B12	B15

Shipping Weight	pounds	95	125
Net Weight	pounds	60	90

### Type B 1½g Volume Blowers

Suitable for all kinds of small volume, low pressure installations. This blower combines high efficiency and low power consumption. Quiet and smooth running.

The housing and multiblade wheel are die-cut steel. The wheel is carefully balanced. The inlet flange and the base which bears both housing and the direct connected motor, are cast iron. Discharge is universal.

Prices for 25 cycle on application.

## Type B IIg Universal Blowers

## With Forward Curved Wheel

The motor is machined circular and held in a cast iron ring and recessed within the cast iron side of the blower in a sheet steel bowl. The multiblade wheel is mounted directly in the motor shaft. There is little overhang because the motor is recessed. This construction eliminates the inlet bearing, independent motor base, and alignment of motor and wheel. Mounted on 4 legs, the IIg Blower is quickly installed; the universal discharge is possible by relocation of the legs.

All direct current blowers are furnished with speed regulators and covers.

Give current, voltage, cycle, and phase—specify discharge arrangement on order.

## Type BC 11g Universal Blowers

With Backward Curved Non-Overloading Wheel

Non-overloading characteristics have been brought to a high state of development in the 11g Type BC Blowers. The motor load remains constant for a large range of air volume over a considerable change in static pressure.

This feature is of distinct value to the architect, the engineer, and contractor in installations where the actual resistance in the system does not agree with the calculated figure for there is not a chance of a motor overload in case the resistance is less than calculated.

Blower has high efficiency available in direct-connected and belted single width, single inlet types and belted double width, double inlet type. The discharge is universal.

Enclosed speed regulators furnished with direct current blowers.

## 1lg Electric Unit Heaters

Rear View

Unit is of the black heat type. The heating elements, individually replaceable, are enclosed in a finned metal sheath. No oxidation is possible. Self-cooled motor propeller fan unit and elements connected within the unit, single set of leads brought out.

Nos. 513 to 1517 can be furnished only for those currents for which controllers are listed, since controller is necessary to obtain operation of thermal safety switch on unit heater.

Controller equipment includes enclosed magnetic starter and remote control switch.

## Type HT 1lg Electric Unit Heaters

No Controller Is Required

For space heating or drying. Eye bolts provided for suspension of unit.

Heating element is non-overheating and interchangeable. Its temperature, whether fan is running or not, does not exceed 400°F. Self-adjusting to temperature, having a slightly higher kilowatt capacity in a cold room than in a warm room.

Suitable for connection to 110 or 220 volts single-phase and to 220 volts 3-phase.

Dimensions over all: Width, 12¾ inches; height, 15 inches; depth, 12¼ inches. Dimensions of case only excluding fan and hanger bolts: Width, 12¾ inches; height, 13¾ inches; depth, 5¾ inches; distance between eye bolts, 5½ inches. Speed, 1550 rpm.

Complete unit is finished in brown crinkle enamel.

When ordering, specify exact voltage. Units for direct current and special voltages can also be supplied.

Shipping weight, 26 pounds. Net weight, 20 pounds.

## 1lg Gas Fired Unit Heaters

**For Heating.**—A complete heating unit in itself, consisting of radiator, fan, electric motor, Bunsen type burner, and electric automatic controls. No water or steam is needed.

**For Ventilation.**—Unit can be located so that complete air circulation is effected without drafts.

**For Cooling.**—During the summer months the gas may be turned off and the fan will force air circulation.

**For Drying.**—In drying room and in the manufacture of products requiring dehydration, this unit heater will be found quick, safe and economical.

Can also be furnished with an exhaust fan for the flue products. Exhaust fan is so designed to force the flue products out a 4-inch pipe, and no flue is needed. Complete details upon request.

Venting tubes made of steel; burner, combustion chamber, tube sheets and draft hood made of cast iron. Has tested safety pilot, which automatically turns off the gas if for any reason the pilot goes out, or burns too low to insure perfect ignition.

Brown wrinkle finish with chromium louvers.

## ILG Unit Heaters

Low Ceiling Type

Vertical Type

Vertical Type with Variable  
Air Deflectors

Horizontal Type

Powerful Ilg self-cooled motor propeller fan enables a stream of warm air to be concentrated at the floor level and minimizes heat loss above the working zone. Can be operated manually, by electric thermostat or stream regulator.

Uniformity of design and construction assures balanced performance.

Tested and rated in accordance with the standard code adopted by the Industrial Unit Heater Association and the American Society of Heating and Ventilating Engineers.

Each heater is given a 500-pound hydrostatic test and a complete electrical test.

Standard finish is Ilg green.

Unit heater prices include fan, motor, casing, individually adjusted air deflectors and heating element. Speed regulator is included where specifically stated. No air valves or other accessories are included.

The exact motor voltage must be specified when ordering.

Ratings apply only in recirculation and free discharge:  
\*CFM. Cubic feet per minute of standard air at 70°F. and standard basis of rating (2 pounds steam pressure 60°F. entering air). Where steam pressure is referred to as a condition of rating it is meant to be the gauge pressure maintained on the heating surface and to determine the pressure required at the boiler a suitable line drop must be allowed for. Where heaters are to handle air at temperatures below freezing it is recommended that a minimum pressure of 5 pounds gauge should be maintained on the heating surface.

†E.D.R. Equivalent direct radiation at standard basis of rating.

## Net Face Areas

Outlet velocities of Ilg Unit Heaters of all types can be computed on the basis of the following net face areas:

Size No.	10	13	17	19	25
Net Face Area.....sq. ft.	1.00	1.56	2.25	3.06	5.06

Dimensions for Vertical, Horizontal (Size No. 19-2) and Low Ceiling types furnished upon request.

## G-E Natural-Convection-Type Horizontal Unit Heaters

A convenient, easily installed heater for heating out-of-the-way places.

Common typical applications: substations, valve houses, pump houses, warehouses, crane cabs, airplane hangars, electric locomotives, blower rooms, repair shops, service stations, laboratories, garages, scale rooms, watchmen's houses, elevators, drying rooms, waiting stations, and ticket booths.

Free air circulation provides maximum heat. Heater is easily installed, simply mount on wall or floor and connect to power line. Easily moved from one job to another.

Heat is available at the turn of the switch. The 3-heat switch provides simple regulation of temperature and economy of operation.

Heater consists of a number of G-E strip heaters mounted in a perforated, pressed-steel case with heat-resisting painted finish.

### Wall-Mounted Style

Designed for mounting directly on wall with main axis horizontal. Can be mounted with cable emerging from either right or left end.

Equipped with heat baffles to prevent overheating and scorching of wall surfaces.

\*Add Federal manufacturer's excise tax of 10 per cent of net price of heaters and controls.

Suitable G-E Control Is Available for These Unit Heaters. Ask Your Distributor for Complete Details.

## G-E Forced-Convection-Type Unit Heaters

50-60 Cycles, A.C.

Portable Style

Suspension Styles

Available in two styles: portable, primarily for floor mounting; suspension, for wall or ceiling mounting.

**Heater.** Equipped with G-E Calrod heater with strong radiating fins that multiply its radiating surface. These fins are electric-furnace-brazed to the heater to provide maximum heat-transfer efficiency.

**Fan.** With G-E aphonic pressure-type fan with matching outlet orifice. Provides efficient and quiet operation.

**Motor.** A G-E totally enclosed motor with sleeve bearings. Motor is protected against direct radiation from heating units by an ingenious baffle. Cool air is drawn over the motor frame at all times through the space between motor and the baffle.

**Automatic Protection Against Overheating.** Heaters

rated under 10 kilowatts have a convenient reset button located on outside of case. On heaters rated 10 kilowatts and higher, remote push-button control is used, and the push button provides the necessary reset feature.

**Housing.** Heater may be directed upward or downward as much as 30 degrees from horizontal, to serve required area. The absence of louvers allows free flow of air.

**Wide Utility.** The two smaller sizes of heaters are so designed that they can be used as fans during hot weather.

To operate motor and fan independently of heaters, the 2-, 3-, and 4-kw heaters are provided with tumbler switch mounted on casing. On the 5- and 7.5-kw heaters, fan-motor leads are brought out so that fan can be connected to manual switch.

## Portable Style—For Floor Mounting

Can be arranged for suspension mounting. Unbolt foot pedestal and supporting arm and readjust arm so that it will be 180 degrees from standard location.

For all such specials, add as follows to price of standard heater.

Quantity (Inclusive)	Price Addition
1 to 9	\$10.00
10 to 24	5.00
25 or more	none

†EDR: Equivalent direct radiation.

‡Price includes 4 feet of armored connecting cable.

§Add Federal manufacturer's excise tax of 10 per cent of net price of heaters and controls.

\*Standard 230-volt heaters operated on 208 volts, 50-60 cycles, a-c, will dissipate approximately 82% of listed kw. Special unit heaters can be supplied for connection of both fan motor and heating elements to circuits listed: 50-60 cycles, 115 volts, single-phase, a-c 208 or 440 volts, a-c single-phase, 2 to 7.5 kw; 3-phase, 10 to 15 kw.; d-c, 115 volts, 2 and 3 kw; d-c, 230 or 250 volts, 2 to 15 kw.

Suitable G-E Control Is Available for These Unit Heaters. Ask Your Distributor for Complete Details

## G-E Strip Heaters

Serve as an air and clamp-on heaters. A few of the common applications are for: process machinery, drying ovens, warming tables, glue tables, water baths, drying cabinets, pipe lines, incubators, valve and pump houses, etc.

**Features:** uniform heat distribution; ridged construction that withstands vibration; compressed insulation.

## Type HF Chromalox Electric Unit Heaters

## Blower Type

115-230 Volts, 60 Cycles, Single Phase

Used to heat watchmen's shelters, factory offices, stock-rooms, warehouses, etc.; in place of steam heating system for heating offices and rooms in spring and fall; to supplement steam heating in cold weather in rooms inadequately heated; and for temporary heating where a portable or easily mounted heater is needed.

Steel heater case provided with handle and rubber feet or pads for portable use. Brackets available for permanent wall mounting. Adjustable louvres will direct air in desired direction. Chromalox Koilstrip elements within the heater warm air drawn in back of heater and forced out the front by cadmium-plated fan. Enclosed type electric motor drives fan.

Positive acting thermostatic switch automatically opens heater circuit if normal operating temperatures are exceeded. Manually operated reset button closes heater circuit when normal temperatures are restored.

Manual control switch turns on heater circuit and fan for winter use, and fan only for summer use. For automatic temperature control, order PA thermostat; prices upon request.

The 1500-watt heaters supplied with 10 feet of heater cord and attachment plug; all other sizes supplied with 10 feet of heater cord only.

## Type H Chromalox Electric Air Heaters

Listed Under Underwriters' Laboratories, Inc.  
Re-Examination Service—Reference No. 7601  
For 115 and 230 Volts

No. EH-2405

Designed for those many hard-to-heat places where heat must be concentrated near the floor. Ideal for mounting underneath low windows.

This heater discharges heated air horizontally into the room where it is needed (not up to the ceiling), thereby providing even heat distribution and eliminating the usual hot spots and cold corners. Mounting side (back part) is always cool, therefore this heater can be fastened to walls or wooden partitions without fire hazard.

Fully assembled with 3 feet of flexible cable and 3-heat switch mounted on standard conduit box ready to connect to power line.

## G-E Calrod Immersion Heaters

G-E immersion heaters offer the most economical method of heating liquids in tanks, kettles, metal barrels, etc. They are of substantial construction and high efficiency, utilizing the well-known G-E Calrod sheath wire.

Fig. 1

Fig. 2

Fig. 3

For heating water, a copper-sheathed unit of high heat density, and having a threaded brass header, is used. Typical heaters are shown.

## For Water—Self-Protecting Type

For service in devices where the unit may accidentally be exposed at times. This heater will operate partly or totally uncovered for a limited period without injury. For its operation, it depends upon the high temperature coefficient of resistance of a special alloy which is used as the heating element. Sheath is made of nickel silver.

## For Noncirculating Oils

For heating liquids such as oil and paraffin. A low watts density is used because of possible damage to the liquids and to the heaters through carbonization, etc. Steel is used

as the sheath and header material. Equipped with an efficient seal at the terminal to protect the G-E Calrod heating element against accidental contact with oil.

.....	1A392	44.00	7.5	3	30	2	36 1/2	13

\*This heater differs from the other heaters in that it is installed from within the container instead of being screwed in from the outside. Therefore, it is provided with a shoulder on the header and with the necessary gasket and tightening nut.

†This heater, for operation on a 230-volt circuit, can be operated single-heat on a 440-volt circuit by running the two elements in series. Switches listed should not be used for circuits of over 250 volts.

‡Straight thread, not pipe thread.

§Diameter is standard pipe thread of size given.

## G-E Heating Cable

A flexible, lead-covered cable which can be bent and formed readily to fit almost any low-temperature heating job.

### Applications

Used for melting ice from eaves and downspouts, protecting sprinkler systems, protecting pipes and valves from freezing, warming valves and pipe lines that carry viscous material, floor heating, freeing sidewalks and other surfaces from ice, kennel floors, and soil heating.

Can also be immersed in solutions, suspended on walls or in air, laid on surfaces, etc.

### Ready Assemblies Fit Most Applications

Many requirements can be met with a heating cable of 400 watts on 110 volts, or a cable of 800 watts on 220 volts. For such jobs, the cable assemblies shown will be very convenient. They are ready to be plugged in. No wiring, no interconnections; just a simple outlet is required.

In many cases, a thermostat assembly for providing automatic temperature control is desirable. It is plugged into the power circuit, and the cable assemblies are plugged into the duplex receptacle on the thermostat assembly—even three or four cable assemblies can be plugged in by using triple taps.

Quantity (Inclusive)	*Thermostat Assembly, No. 4984571G2 Each	†Cable Assembly, No. 4915978G1 Each	†Cable Assembly, No. 4915978G2 Each
1-9	\$15.85	\$7.50	\$13.50
10-39	15.15	7.25	13.10
40-99	14.30	7.10	12.80
100 or More	13.80	6.95	12.50

\*No. 4984571G2 thermostat assembly consists of No. 4980281G18 thermostat, adjustable range 30 to 120°F., duplex receptacle, and 3-foot all-rubber cord, with plug. Approximate shipping weight, 5 pounds. Capacity, 15 amperes up to 250 volts, a.c. only.

†No. 4915978G1 cable assembly consists of 60 feet of heating cable, with the two ends assembled into one rubber plug. Approximate shipping weight, 11 pounds. Rating, 400 watts, 110 volts.

†No. 4915978G2 cable assembly consists of 120 feet of heating cable, with two ends assembled into one rubber plug. Approximate shipping weight, 22 pounds. Rating, 800 watts, 220 volts.

G-E heating cable is also available by the foot. Use in lengths of at least 60 feet on 115 volts, 400 watts; 120 feet on 220 volts, 800 watts. Price in lengths of 1-599 feet, 9 cents per foot.

## Chromalox Immersion Heaters

115 or 230 Volts

Provided with standard pipe-threaded screw plug for easy mounting through walls of tanks, in pipes, etc. Heated section must be completely immersed to be heated.

**Type M.** For heating water and solutions that readily absorb heat. Copper sheath, bronze screw plug and brazed joints are standard. For Oakite solution cleaning tanks, where copper is attacked, specify steel sheath, iron screw plug with welded joints at same price.

**Type MO.** For heating mineral oils, paraffin, etc. Has steel sheath, iron screw plug and welded joints as standard.

\*Refers to standard pipe thread.

## Ideal Heavy Duty Etchers

For Etching Large Parts

For marking permanent identifications on smooth castings, big parts, and other large smooth-surfaced metal objects.

Etching heats vary in 100-watt steps from 300 to 1100 watts. Top heat is 1300 watts. Prominence of marking is governed by heat used and speed at which point travels over metal.

Furnished with 10-tap switch, on-off switch indicating lamp, large ground clamp, 6-ounce heat-resisting etching tool and 4x7-inch work plate.

Weight, 30 pounds.

No. 11-017, 115 Volts, 50-60 Cycles.....	each	\$66.00
No. 11-018, 230 Volts, 50-60 Cycles.....	each	74.50

No. 11-020, 230 Volts, 25 Cycles.....	each	80.00
No. L-887, Extra Etcher Points.....	each	2.75

### Ideal Portable Electric Markers

A powerful small marking tool that permanently cuts in any kind of material, including alloys, brass, tile, wood, glass, etc. Shaped to fit the hand, it can be held and used to write almost as easily as a pencil. Has the balance of a fine writing pen. Complete marker only 6½ in. long, 1½ in. wide, and 1¼ in. thick. Has a steel point furnished for ordinary uses. For materials up to 64 Rockwell scale C, a diamond point is recommended. Furnished with a 5-foot cord. Case of marker is black plastic. Packed in cardboard box. Weight complete, 10 ounces.

No. 14-022, Model U with Steel Point, 115 V. 60 Cy.. \$11.65  
No. L-2180, Hardened Steel Point..... 2.94  
No. L-2647, Diamond Point..... 6.88

### No. 225 Drake Electric Soldering Irons

Recommended for light radio work. Nichrome wire wound on amber mica. An 80-watt iron with ¾-inch tip, complete with 6-foot heater cord and rubber plug. Nickel plated.

No. 225, Weight, 1½ Pounds..... complete \$4.05  
Element..... each 2.13  
Tip..... each .53

### No. 450 Drake Electric Soldering Irons

80 to 140 Watts—110 Volts—A.C. or D.C.

For fine instruments, telephone and other light soldering.  
No. 450, Complete with 6-Foot Cord and Stand. each \$5.50  
No. 450, Element..... each 3.20  
Plug Tip, ¾-Inch..... each .53  
Shipping Weight, Complete..... pounds 2

### No. 600 Drake Electric Soldering Irons

100 Watts—120 Volts—A.C. or D.C.

For switchboards, radio and other light manufacturing uses. Plug tip, ¾ inch with 6-foot cord and stand.  
No. 600, Shipping Weight, 2 Pounds..... each \$6.50  
Element..... each 3.73  
Tip..... each .53

### No. 800 Drake Electric Soldering Irons

200 Watts—120 Volts—A.C. or D.C.

For art glass, medium tin work and general factory soldering. Plug tip, ¾ inch. With 6-foot cord and stand.  
No. 800, Shipping Weight, 3 Pounds..... each \$9.00  
Element..... each 6.39  
Tip..... each .85

### Drake Electric Soldering Irons

Finished in gunmetal. With 6-foot heater cord and rubber plug.

Shipping weight, 2 pounds.

#### No. 700—60-Watt Iron with ⅝-Inch Copper Tip

For light soldering, high quality Nichrome wire used in porcelain element.

No. 700..... each \$1.96

#### No. 701—100-Watt Iron with ⅞-Inch Copper Tip

For light medium work. High quality Nichrome wire used in porcelain element.

No. 701..... each \$2.56

#### No. 703—150-Watt Iron with 1½-Inch Copper Tip

For garages, machine shops, etc. High quality Nichrome wire wound on amber mica.

No. 703..... each \$6.00

### No. 1100 Drake Electric Soldering Irons

300 Watts—110 Volts—A.C. or D.C.

For automobile radiators and small branding irons. Plug tip, ⅞ inch. With 6-foot cord and stand.

No. 1100, Shipping Weight, 4 Pounds..... each \$12.00  
Element with Housing..... each 8.52  
Tip..... each 1.07

### No. 1200 Drake Electric Soldering Irons

300 Watts—110 Volts—A.C. or D.C.

For tin-smiths, automobile radiators and small branding irons. Screw tip, 1¼ inches. With 6-foot cord and stand. Shipping weight, 4 pounds.

No. 1200..... each \$13.00  
Heating Element..... each 9.59  
Screw Tip..... each 2.66

### No. 1400 Drake Electric Soldering Irons

500 Watts—110 Volts—A.C. or D.C.

For heavy soldering on tanks, roofs, large branding irons, etc. Screw tip, 1½ inches. With 6-foot cord and stand.

No. 1400, Shipping Weight, 4 Pounds..... each \$15.00  
Element..... each 10.65  
Tip..... each 3.20

### No. S-76 American Beauty Electric Soldering Irons

For 110-120 Volts

For small, light work; consumes 50 watts. Specially treated copper core with aluminum head, to which tip screws with taper fit.

For all standard voltages and for 12 and 32 volts.

Diameter tip ⅞-inch; length, 11½ inches.

Net weight, 6 ounces.

No. S-76..... each \$5.00  
No. 9276 Element..... each 3.00  
No. 3734, Tip..... each .40

## American Beauty Electric Soldering Irons

No. 3138

No. 3158

All irons are made with a special baffle plate at the shank to prevent free conduction of heat to handles.

Copper tips are treated with special nickel coating to prevent oxidation and corrosion.

The heating element core is made of solid steel rod. The outer surface is heat treated to prevent or reduce to the minimum oxidation and corrosion.

Stands are supplied with all irons.

Pyramid type tips are regularly supplied with Nos. 3138 and 3158, chisel type with Nos. 3178 and 3198. All numbers can be supplied with either type tip, when so specified. A special long drawn semi-chisel shape tip can be furnished for No. 3138.

**No. 3138.** Primarily adapted for light work; radio, telephone, telegraph, ignition work, etc.

**No. 3158.** For the same purposes as No. 3138 iron and work of a somewhat heavier nature; for electric starter and ignition manufacturers, repair work, etc.

**No. 3178.** For use on heavy work; connections, light commutators, and for service and production work.

**No. 3198.** For shop, service, production work, etc. Supplies a large volume of heat at high temperature.

## No. 475 American Beauty Temperature Regulating Stand

A thermostatically controlled device for regulating the temperature of electric soldering irons. The soldering iron, when placed on this stand, is maintained at working temperature ready for instant use.

Through an adjustment on bottom of stand, thermostat may be set for the maintenance of any desired temperature.

Body of stand is of molded plastic. Soldering iron holder is of copper.

For use with electric soldering irons up to 660 watts consumption and for circuits up to 240 volts, a.c. only.

Stand is provided with cord and attachment plug cap for connection to current and with a receptacle for connection of the electric soldering iron.

Packed 1 in a paper box.

Net weight, 27 ounces.

**No. 475.....each \$5.50**

## G-E Calrod Soldering Irons

For industrial use to provide the following advantages:  
High Speed Soldering Long Life and Low Maintenance  
Uniform Performance Convenient Tip Renewal  
All furnished with 6-foot rubber covered cord and plug;  
also supporting stand (except extra-heavy duty iron.)

### No. 6A161—75 Watts, 115 Volts

## Ironclad Renewal Tips

No corroding, no filing.

Lower upkeep cost, less maintenance, and longer life. Illustration shows the effect of solder (250°C. for 363.5 hours) on plain copper (bottom) and Ironclad copper (top) soldering tips.

\*Long tip.

Available for 230 volts at no extra cost.

## Ideal Thermo-Grip Soldering Tools

## 1000 Watt Power Units

The Ideal Thermo-Grip is adaptable to practically all soldering jobs—closely grouped parts, difficult positions, cramped spaces, inflammable surroundings. Does all types of soldering quicker, safer and easier. Heats instantly and concentrates heat only on part to be soldered. Eliminates fire hazard and danger of melting nearby joints or burning other parts. Does not oxidize the tin in solder, weaken the solder or discolor the finished job. Reaches soldering temperature in less than one minute. Handy thumb-switch permits close heat control for better soldering. All parts fully insulated. Current is reduced to harmless low voltage. Operates on resistance heating principle. Can be used for long periods of time without overheating. A Thermo-Grip consists of combination power unit and carrying case, secondary lead assembly, and one or more of the attachments described below:

## 1000 Watt Power Units

No. 12-062, 115 Volts, 50-60 Cycles.....	each	\$38.60
No. 12-063, 115 Volts, 25 Cycles.....	each	49.95
No. 12-064, 230 Volts, 50-60 Cycles.....	each	42.50
No. 12-066, Secondary Lead Assembly.....	each	5.95

## Attachments for 1000 Watt Power Units

## No. 12-067 Plier Attachment.

(Illustrated with Power Unit)

Used for most soldering applications where work may be held in jaws and heated, i.e., removing or applying solder lugs up to 450 amperes, sweating and unsweating copper tube and fittings up to 1½ inches in diameter, soldering joints, etc.

No. 12-067.....	each	\$9.95
-----------------	------	--------

## No. 12-069 Pencil Attachment.

For spot soldering—where ground clamp may be attached to a metal part of work to complete secondary circuit, i.e., spot soldering, soldering sheet metal, wire joints, commutator risers, etc. Includes "C" type ground clamp.

No. 12-069.....	each	\$10.95
-----------------	------	---------

## No. 12-068 Fork Attachment.

For soldering in restricted places—where straight tools cannot be used, i.e., soldering lugs, terminals or connections in switch boxes, switchboards, inside machines, etc. The electrode holders can be turned and locked in any position.

No. 12-068.....	each	\$7.95
-----------------	------	--------

**When ordering**, please specify power unit, secondary lead assembly and one or more of the attachments listed.

## Midget Size Power Units

Has quick-make-and-break connectors for easy interchangeability of attachments. With Hi-Lo heat switch—Hi heat, 300 watts; Lo heat, 225 watts. Furnished with 5-foot primary cord, and 1-foot secondary leads.

Weight, 9 pounds.

No. 12-019, 115 Volts, 50-60 Cycles.....	each	\$23.50
No. 12-021, 230 Volts, 50-60 Cycles.....	each	29.00
No. 12-020, 115 Volts, 25 Cycles.....	each	35.00

## Attachments for Midget Power Units

## No. 12-023 Plier Attachments

For small work such as small terminals and lugs up to 150-ampere size, threadless copper tubing or fittings up to ¼ inch in diameter.

Rating, 300 watts.

Furnished with 5-foot leads.

Weight, 2 pounds.

No. 12-023.....	each	\$15.75
No. L-505, Extra Carbons.....	per set	.55

## No. 12-024 Pencil Attachments

For light seam and spot soldering; ¼-inch diameter carbon electrode may be fixed either in line with or at 45 degrees to the handle.

Rating, 180 watts.

Furnished with 5-foot lead and ground clamp.

Weight, 1½ pounds.

No. 12-024.....	each	\$8.00
No. L-583, Extra Carbons.....	each	.20

## No. 12-025 Fork Attachments

Only 8½ inches long, including carbons. For soldering in tight places, etc., where bi-carbon end moves between parts and only heats metal where it is held and lightly pressed.

Rating, 200 watts.

Furnished with 5-foot leads.

Weight, 1½ pounds.

No. 12-025.....	each	\$10.50
No. L-619, Extra Carbons.....	per set	.55

## No. 12-043 Etcher Attachments

Electrically marks on iron, steel and their alloys. Makes a permanent mark on tools, gages, dies, etc.

Rating, 320 watts.

Furnished with workplate, carbon resistor and etcher tool with 5-foot leads.

Weight, 3¾ pounds.

No. 12-043.....	each	\$16.50
No. R-247, Extra Points.....	each	1.75

**Chromalox Electric Melting Pots****For Soft Metals**

115, 230, and 460 Volts

900°F. Maximum Operating Temperature

Nos. P-15, P-25 and P-50  
Showing Flexible Conduit  
and 3-Heat SwitchTop View of No. P-50 Showing  
Large Capacity with No  
Interior ObstructionsNos. P-100 to P-750 Inclusive,  
with Lifting Lugs. With  
Model M Thermostat for  
Automatic Control

For melting solder, lead, babbitt, tin, type metal; but not zinc.

Heated by Chromalox ring units clamped to the bottom of the pot. The larger pots also have strip heaters clamped to the sides. Interior of pots left free for maximum capacity and low radiation losses.

Nos. P-15 to P-50 inclusive for manual control have the 3-heat switch mounted on conduit box, connected to pot by 3 feet of flexible conduit. The No. P-8 pot is single heat only, and has 3 feet of flexible conduit with armored attachment plug.

Nos. P-100 to P-750 inclusive for automatic temperature control are wired for single-heat operation, and have terminal box for line connections mounted on the side. Thermostat Model M or Z and correct magnetic contactor should be used. When thermostat is ordered with melting pot, a steel protecting tube for the thermostat bulb is furnished.

Nos. P-100 to P-750 pots inclusive, can be furnished for 3 phase 230 volt operation and should always be used with automatic temperature control.

All pots can be furnished for single-phase operation,

**G-E Metal-Melting Pots****For Soft Metals**

Maximum Operating Temperature, 950°F.

Nos. 2881146G2,  
2881146G3,  
2881146G4, or  
2881146G5Nos. 2666404G1, 2666404G2,  
2666407G1, or 2666407G2

For melting lead, babbitt, tin, solder, type metal, and similar alloys or metals, except spelter or zinc.

Each pot consists of a sheet-steel cylindrical casing in which is supported a cast-iron crucible. Space between casing and crucible is heat-insulated.

G-E Calrod cast-in immersion-type heating units are suspended from rim of pot and extend directly into metal to be melted.

**Small Portable Pots for Solder and Lead**

Maximum Operating Temperature, 750°F.

Similar in construction to the pots listed above.

Heater is of G-E Calrod construction using heavy-wall steel tubing, and provided with a terminal cup.

Equipped with bail and 6-foot cord with suitable attaching plug, affording ready portability.

Approximate capacity: 50/50 solder, 12 lb.; lead, 16 lb. Watts, 550.

Inside dimensions: diameter, 4¼ inches; depth, 3¾ inches. Outside dimensions: diameter, 9 inches; depth, 6½ inches.

## G-E Automatic Gluepots

Has removable copper container for holding glue, heated copper jacket in contact with glue container, and steel protecting casing.

Heat insulation is placed between heated jacket and outer casing. Heating unit surrounds jacket and is completely mica-insulated.

Each pot is equipped with contact plug, 8 feet of rubber-covered cord, and socket attaching plug.

A sensitive snap-acting thermostat is mounted on jacket and maintains a glue temperature at 140-150°F.

## Vulcan Electric Solder Pots

## High Speed and Standard

No. 1600

For tinning parts, leads, and fast dip soldering. Rate of speed of pot soldering depends on correct size of pot, size of parts, and melting point of the solder used.

Replaceable element. Always specify voltage wanted when ordering.

No. 1600 is cast in one piece and attached to a square base of heat resisting material. Flat type element.

No. 1606 is cast in two pieces well insulated from each other against heat loss. Disc type element.

No. 1701 has cast iron pot securely assembled in an outer casing of heavy sheet steel. Disc type element.

No. 1703 comprises a replaceable unit and cast iron pot.

Nos. 1700, 1702, 1704, 1706, and 1716 have heavy cast iron pots with outer casing of heavy sheet steel. Cartridge type elements.

## G-E Industrial Heating Thermostats

For nearly any application of electric heaters and devices. Consists of a switch mechanism actuated by a bulb-and-bellows system. Current capacity, 25 amps., a.c., non-inductive, 115 or 230 volts. For higher currents and voltages, use G-E contactors.

Has capillary-tube length of 25 inches. Similar devices with capillary-tube lengths of 8, 60, or 120 inches are available at the same prices.

## Vulcan Electric Glue Pots

## Water Jacket Type with Thermostat Control

For 110-120 or 220-230 volts. Holds glue to a maximum temperature of 150°F. The use of a liquid heating medium permits controlled transfer of heat to glue without danger of localized overheating.

Heavy cast aluminum with attached base. Inside pot is aluminum lined. With 6-foot Underwriters' listed heater cord and plug.

Specify voltage and if for a.c. or d.c.

## Model GA Wasp Arc Welders Capacity, 150-200 Amperes—Direct Current

The 150-ampere welder is adapted to light work and thin materials and is very compact, occupying only 2½ square feet of floor space.

The 200-ampere welder meets the demand for a wide range machine that can handle light work and heavy work such as large thick plates and heavy castings.

Dual control is used. A selector switch provides full range control with three steps on Model GA-150 and four steps on Model GA-200. Fine adjustment is by calibrated field rheostat. Polarity is reversed by switching welding cable connections. Welding ranges: Model GA-150, 20-200 amperes at 25 volts; Model GA-200, 25-250 amperes at 30 volts. Both models are limited to operating not more than 60 per cent of time, at maximum output.

## Hornet Single Operator Motor Generator Arc Welders

Capacity, 200, 300 or 400 Amperes—20 to 40 Volts—  
Direct Current—1800 RPM.

A two-bearing unit, with the motor rotor and generator armature mounted on the same shaft. Within its range,

are welders can be operated in parallel without use of conventional equalizing circuit.

Two controls accurately adjust and indicate all current settings. Two-range switch has only two positions, a low point for light welding and a high position for medium and heavy jobs. As both ranges overlap, there are no blind spots. Exact welding current for any job can be infinitely adjusted by a glove grip handwheel with a calibrated dial, graduated in amperes. A rotary pointer within wheel indicates each current value as selected by operator. Meters are not necessary. Polarity can be changed by a handy snap switch. Accidental reversal even under heavy loads is impossible due to a patented electric circuit feature. Adequate ventilation is furnished by propeller blades attached to revolving shaft, which draws air in at both ends of machine and expels it downward at center.

## Wilson Busybee Portable Arc Welders

Capacity, 130 or 180 Amperes,  
230 Volts, 60 Cycles,  
Single-Phase

Used in garages and repair shops as a light capacity welder for intermittent operation on rural power supply lines.

Available in 130 and 180-ampere sizes. The 130-ampere size uses electrodes up to ⅜-inch diameter and the 180-ampere size uses electrodes up to ½-inch diameter.

Furnished with input lead; ground clamp; electrode holder; face shield; chipping hammer; scratch brush; one pair of leather gloves; 5 pounds of assorted, shielded, arc mild steel type electrodes; one easy-arc starter; and book of instructions. Can be furnished with capacitors.

Finished in blue enamel.

## Yellow Jacket Engine Driven Arc Welders

Capacity, 200, 300 or 400 Amperes—20 to 40 Volts—  
Direct Current—1800 RPM.

A sturdy, dependable gas engine driven welding machine. The machine is adaptable to all types of welding, from sheets to heavy castings. Simplified control obtained through a large, easily propelled handwheel which permits infinite adjustments in either high or low range. Current is indicated on an accurately calibrated, easily read dial. In addition to convenient current control, the generator embodies variable stabilizer which is automatically regulated by the patented adjustable upper pole. No external resistance or brush shifting devices are used. A convenient switch is provided for shifting polarity to suit different types of electrodes. The machine is equipped with all necessary engine accessories such as self-starter, storage battery, governor, battery charging generator, 22-gallon gasoline tank, and large capacity radiator. In addition, a vacuum electric type idling device is furnished which automatically reduces engine speed when welding stops, and increases to full speed when the arc is struck.

**No. 323A Duralite Coverglas Goggles**

Protects against particles striking from above, below, in front, or either side. Fits over most any type or style of glasses or spectacles. Anatomically shaped eyecups made of lightweight material which does not conduct heat or electricity. Is moisture-proof, strong, and durable. Permanent adjustment of bridge can be made instantly. One-piece headband is quickly and easily adjusted. Has indirect ventilated side shields, solid lens rings, and is equipped with filter lenses to protect against dazzling glare and injurious light rays. Troy weight, 68 pennyweight.

No. 323A, with Noviweld and Cover Lenses..... each .....  
 With Noviweld-Didymium and Cover Lenses... each .....

**No. 404A Duraweld Goggles**

Eyecups anatomically molded for right and left eye, have larger, more comfortable edges, rounded to fit flush against contour of face. Improved nasal fitting. Side shields provide increased ventilation to keep eyes cool and to help prevent fogging of lenses. Louvers are so designed that it is impossible for stray light rays or sparks to reach eyes. Non-slip, one-piece headband is easily adjusted. Ball-chain bridge, covered with curved plastic tubing which fits snugly over bridge of nose, easily adjusted. Fitted with 50 mm. Noviweld lenses in 3, 4, 5, 6 or 8 shades.

No. 404A, Troy Weight, 63 Pennyweight..... each .....

**No. 3080 Flash Goggles**

Especially designed for work in the vicinity of electric welding operations and exposure to the glare of flashes encountered in arc welding. Protects the eyes against impact hazards

striking from in front, from above, below, or from the side. Sturdy, non-corroding, spectacle type frames. Fitted with soft leather side shields. Bridge guards prevent flying particles or stray light getting into the eyes.

Fitted with 50 mm. super armorplate calobar lenses, medium, dark and extra dark shades. When ordering specify shade of calobar.

No. 3080.....per pair .....

**Tweco Redhead Cable Ground Clamps****For Electric Welding****Junior**

For heavy duty electric welding service. Gives a quick, positive and portable ground connection. Increases machine and operator efficiency. Helps to eliminate arc blow; makes holders and cable run cool, last

longer. Cuts current consumption.

Made of special high copper alloy. Insulated spring.

Junior and Senior Models have shunted jaws.

**Twecotong Electrode Holders****No. A-14**

Internal-keyed tubular insulation gives holder jaws maximum protection. Wide opening jaws with ample

spring tension and proper leverage assure easy electrode insertion and positive grip. The interchangeable top, and bottom jaw insulators as well as the body insulators are made from molded-laminated woven glass cloth bakelite. Holder tongs are made of high copper alloy. Deeply recessed insulation holding screws. Ventilated fiber handle. Fully insulated spring.

Cable connection on **No. A-316** and **No. A-14** permits soldering and clamping of cable to holder. **No. A-38** is provided with detachable (pipe thread) solder fitting.

**Tweco Cable Splicers**

For quick repair of broken welding cables or the salvaging of short lengths.

Has soldering provision between bolted ends.

A heavy fiber sleeve covers the spliced cable.

No. S, For No. 6, 4, or 2 Cable Size	each	\$8.00
No. M, For No. 1 Through 2/0 Cable Size	each	1.00
No. L, For No. 3/0 and 4/0 Cable Size	each	1.20

**Tweco Sol-Con Cable Connectors**Solder Cable Connection  
For Electric Welding

Detachable type, quickly disconnected by a turn and toggle of the two ends, male plug and female receptacle.

Made from precision machined hexagon brass stock,  $\frac{5}{8}$ -inch on the No. 1 and  $1\frac{1}{8}$ -inch on the No. 2 connector.

Cable solders in with acid core solder.

The bore of the female receptacle is broken by a pin-key. The flattened end of the male plug, when inserted in the female receptacle, passes the pin-key; then a slight turn of the male plug locks the pin-key securely in the ring groove on the male plug.

Heavy wall red fiber insulation sleeves are securely held in place by fillister head machine screws.

No. 1, For 1, 2, 4 Cable	each	\$1.35
No. 2, For 1/0 Through 4/0 Cable	each	1.85
No. 4T, For 3/0 and 4/0 Cable. High Amperage	each	2.40

Bakelite covers can be furnished at extra cost where moisture is a hazard.

Male or female half-connector, one-half price full connector.

**Tweco Sol-Con Machine Terminals**

Solder Cable Connection

For Electric Welding

Terminal bolts directly to the positive and negative studs on any welding machine providing a quick-detach or jumping-in of cables right at the machine.

When moving machine or repairing cables, much time is saved by the quick removal of the male connector which slips from the female receptacle of the terminal.

Made in 45° angle and 180° offset; two sizes of each, No. 1-A for angle and No. 1-O for offset use the male plug of No. 1 connector. No. 2-A and No. 2-O use the male plug of No. 2 connector.

**Complete, Female Terminal and Male Connector**

No. 1-A or 1-O, For 1, 2, 4 Cable	each	\$1.75
No. 2-A or 2-O, For 1/0 Through 4/0 Cable	each	2.25

**Female Terminal Only**

No. 1-AF or 1-OF	each	1.15
No. 2-AF or 2-OF	each	1.35

**Male Half, Plug Only**

No. 1 For 1-A or 1-O	each	.675
No. 2 For 2-A or 2-O	each	.925

**Twecolugs**

Mechanical Cable Lugs

No Solder Type

Insert Cable Strands, Turn  
Screw Into Nut Held Stationary

Designed primarily for use on arc welding cables where high amperages are used.

Operates on the principle of a tapered screw terminal wedging into a hollow seated body.

Precision machined. Terminal is made of high copper alloy. Brass body of lug is hexagon for ease of holding while installing.

Hole type, all sizes, is drilled  $\frac{21}{32}$ -inch to accommodate as large as  $\frac{5}{8}$ -inch machine studs. Slotted or open type will also fit  $\frac{5}{8}$ -inch machine studs.

**No. 1 Saylor-Beall Farm and Home Units**

$\frac{1}{4}$ -Horsepower Motor—110-Volt, 60-Cycle, Single-Phase A. C.

Used for spraying liquid germicides on gardens and all forms of close-in planting; animal sprays and disinfectants for barns and milk houses.

The blow-gun is a handy device for blowing dust and dirt from radiator grilles of tractors and for general maintenance of equipment.

Steady flow of air-power is furnished by a compact  $\frac{1}{4}$ -horsepower motor.

The 2-inch bore with  $1\frac{3}{4}$ -inch stroke of piston delivers approximately 2 cubic feet of air per minute.

Speed of compressor, 750 rpm. Piston displacement, 2.39 cubic feet per minute. Weight, 55 pounds.

**No. 1, Complete.** ..... each \$65.75

**No. 116KC, Compressor, Split Phase Motor and Cord.** ..... each 52.50

**No. 2810K, Insecticide Gun and Clip** ..... each 8.75

## No. 3 Saylor-Beall Farm and Home Unit

$\frac{1}{2}$ -Horsepower Motor—110-Volt, 60-Cycle, Single-Phase A. C.

Used for spray painting large surfaces such as barns and houses; insecticide spraying on close-in shrubbery, animals, and chicken roosts. Also used with tire adapter and gauge for inflating pneumatic tires and has a blow-gun attachment for blowing dust and dirt from machinery and equipment.

Specifications: bore,  $2\frac{1}{2}$  inches; stroke,  $1\frac{3}{4}$  inches; speed of compressor, 540 rpm.; piston displacement, 2.70 cubic feet per minute. Approximate weight, 70 pounds.

Safety valve is set at 60 pounds.

Features a material tank which holds 2 gallons.

No. 3, Complete.....	each	\$136.50

## No. 1 Saylor-Beall Farm and Home Kits

### Insecticide

Designed for use with Nos. 1, 2, and 3 compressors or with any compressor which the safety valve is set at not more than 60 pounds.

Contains a spray gun for spraying of liquid insecticide on close-in plantings of shrubbery, as well as animal and building insecticide spraying; 14-foot air hose; and blow gun for blowing dust and other foreign matter from machinery, clothing, etc.

No. 1, Complete.....	each	\$13.25
No. 2810K, Spray Gun and Cup.....	each	8.75
No. 311K, $12\frac{1}{2}$ -Foot Air Hose.....	each	2.25
No. 2583K, Blow Gun.....	each	2.25

## No. 2 Saylor-Beall Farm and Home Kits

### Whitewash and Insecticide

Designed for use with Nos. 1, 2, and 3 compressors or with any compressor on which the safety valve is set at not more than 60 pounds.

Contains the same accessories as Kit No. 1 plus the addition of a paint spray gun and one additional nozzle and a tire adapter and gauge.

No. 2, Complete.....	each	\$30.75
No. 1210KA, Paint Gun, Cup, No. 1 Nozzle.....	each	13.70
No. 1177K, Round Nozzle.....	each	1.45

**Paul Shallow Well Pumps**

115-Volt, 60 Cycle Single-Phase Motor—1725 RPM.

Used to supply the normal requirements of farm and home.

Should not be used where the source of supply is more than 22 feet below the level of the pump.

Standard equipment includes: self-priming suction pump, with one-piece cast body, complete with air charger, V-belt drive, and strainer; motor with built-in overload protector, two-bearing shaft, horizontally

mounted; two-pole control switch with range of 60 lbs., adjustable differential, 15 to 30 lbs. (normally set to cut in at 20 pounds and off at 40 pounds), vertical visible silver contact.

Fitted with a brass relief valve.

With legs or wall bracket for choice of mounting.

**Paul Shallow Well Water Systems**

With 10-Gallon Storage Tanks

115-Volt, 60 Cycles Single-Phase Motor—1725 RPM.

Should be used only where the source of supply is not more than 22 feet below the level of the pump.

Has self-priming suction pump with one-piece cast body, air charger, V-belt drive, and strainer.

Motor has a built-in overload protector, two-bearing shaft, and is horizontally mounted.

Tank is electric welded, galvanized inside and out, and is tested for 85 pounds working pressure.

Furnished with two-pole control switch with a range of 60 pounds, adjustable differential, 15 to 30 pounds, (normally set to cut in at 20 pounds and off at 40 pounds), and vertical visible silver contact.

Fitted with brass relief valve.

Pipe sizes, suction and service,  $\frac{3}{4}$  inch. Height, 29 inches. Width, 14 inches. Length, 32 inches.

**Paul Shallow Well Water Systems  
With 12-Gallon Storage Tank**

115-Volt, 60 Cycle Single-Phase Motor—1725 RPM.

Recommended for shallow well (22-foot vertical lift) installations where occasional peak loads do not more than slightly exceed the capacity of the pump.

Has self-priming suction pump with one-piece cast body, air charger, V-belt drive, and strainer.

Motor has a built-in overload protector, two-bearing shaft, and is horizontally mounted.

Tank is mounted

vertically and is galvanized inside and out.

Furnished with two-pole control switch with a range of 60 pounds, adjustable differential, 15 to 30 pounds (normally set to cut in at 20 pounds and off at 40 pounds), and vertical visible silver contact. Fitted with brass relief valve.

**No. CD-2 Paul Sump Pumps**With  $\frac{1}{4}$ -Horsepower Motor

115 Volts, 60 Cycles

Operates successfully wherever water collects at a point below the drainage level of sewer facilities, or where drainage water must be lifted over intervening obstacles.

Recommended for buildings with deep basements, boiler rooms, settling basins, flywheel and elevator sumps, tunnels, scale pits, etc.

Total discharge: 5-foot head, 2500 gallons per hour; 10-foot head, 2000 gallons per hour; 15-foot head, 1500 gallons per hour.

All Brass.

Pipe connection,  $1\frac{1}{4}$  inches.

Overall height, 42 inches.

Maximum sump depth, 2 feet.

Shipping weight, 150 pounds.

Each. ....	\$65.00

## Advantages of Purchasing General Electric Motors

General Electric motors are manufactured in a wide variety of types and ratings. The most widely used motors—those fulfilling the requirements of the great majority of industrial applications—are listed in this catalog. Motors of large size, non-standard rating, or special construction are described in other publications.

General Electric motors possess the exacting characteristics needed to power modern industrial machinery. They are mechanically sturdy; they incorporate the latest developments in electrical design; and they provide the essential benefits of long life and unusually trouble-free service. Specified values of current, torque, and speed can be depended upon in every unit.

Electric motors form a most versatile type of drive. They permit the application of power directly to the job. They frequently eliminate gearing and belting requirements altogether. They make it possible to bring processing operations directly into a production line.

The wide choice available in G-E motors permits the efficient application of motors in widely varying types of drives. The different enclosures offered permit the selection of motors that will stand up under the most severe conditions and that can be safely operated in the most hazardous locations. Enclosures can be obtained for installation in the presence of explosive and corrosive fumes, magnetic and abrasive dusts, splashing liquids, outdoor weather, and other adverse conditions.

General Electric motors are backed up by renewal-parts and exchange-plan services that mean economy and long life to any motor installation. G-E renewal parts are built of the same materials and to the same specifications as the original equipment. G-E exchange-plan motors eliminate long delays in repair or replacement of motors in fractional-horsepower sizes.

## Selection of Motors and Control

The selection of an electric motor and control for a given application depends upon the following factors:

### Available Power

Whether a.c. or d.c., the voltage, and if a.c. the number of phases, the frequency, and whether a 2, 3, or 4-wire system.

### Surrounding Conditions

G-E motors are exceptionally well protected and insulated to withstand atmospheric and other conditions to which the majority of motors are subjected. For unusual conditions, however, the Company is prepared to furnish motors especially designed to withstand the extraordinarily severe conditions under which they will operate. If motors or control are to be used under any of the following conditions, ask for engineering recommendations:

1. Inflammable gases or dusts where a spark would cause an explosion.
2. Rooms filled with hot vapors.
3. Where strong acid or alkaline vapors are encountered.
4. Excessive moisture.
5. Room temperature more than 40°C. (104°F.) or below 0°C. (32°F.).
6. Where windings are exposed to excessive amounts of conducting dusts: iron, carbon, coke, etc.
7. Where windings are exposed to excessive amounts of abrasive dusts: stone dust, cement, etc.

8. Occasional or repeated submergence, as on the deck of a ship.

9. Excessive vibration.

Full particulars of the condition to be met must be given in each case.

In some cases, particularly where very dusty conditions are encountered, as in foundries, etc., even though a standard open motor may operate successfully, a totally enclosed motor should be considered because of the prevention of frequent shutdowns for cleaning purposes.

### Starting Conditions

In many cases, the user knows, from past experience in similar applications, the type and rating of motor he wants, or frequently the manufacturer of the machine to be driven will supply the desired information. This makes easy the selection of the correct motor for a particular application. If it is not possible to get accurate information as to the size of the motor needed, the amount of pull actually required to start the load can usually be measured. Since the frequency of starting and the duration of the starting period, as well as unusual starting-current limitations, are very vital factors in determining the type and size of control and motor selected, they should be determined. Otherwise, a generalization of starting conditions as light, medium, heavy, or extremely heavy can be made. From this, an estimate as to the proper motor and control can be obtained. It is desirable, where information as to the requirements is not available, to conduct tests and, on the basis of the results, to select a motor suitable for the particular job.

## Selections of Motors and Control

Continued

## Running Conditions

## Speeds

Motors are usually selected with as high a standard normal speed as good engineering practice will allow, because, within limits, the lower the speed of the motor, the more costly it is to build, and frequently its operating characteristics are not quite so good as those of higher speed, standard motors. However, the increased cost of mechanical transmission sometimes offsets such advantages where the driven machine operates at a very low speed.

## Constant vs. Adjustable Speeds

Constant-speed motors are found best in the vast majority of cases. Adjustable-speed motors are more expensive and, in ordinary sizes, are seldom justified unless the quantity or quality of the output of the driven machines will be improved or the range of their capacity will be materially increased.

## Speed Regulation

(Change in speed from no load to full load.)

1. Close speed regulation is desirable for machine tools, textile machinery, and similar work.

2. Wide speed regulation is desirable with flywheel-type loads where the work strokes occur less than 25 times per minute, or where peak loads occur which might greatly overload the motor if it did not automatically slow down to take care of this.

Note—Motor of the so-called adjustable-varying-speed type, like the wound-rotor motor, or d.c. motors with armature regulation, give adjustable-varying speed with close speed regulation if the torque required by the driven machine is constant; wide speed regulation, if the torque required is fluctuating. These types are, therefore, not suited for machine tools or for similar work.

## Load Conditions

All standard, general-purpose, G-E motors are designed to carry reasonably fluctuating loads both below and above normal rating. The equivalent average load determines the size of the motor.

Note—Because of the wide variety of requirements of driven machines, the starting, rather than the running, duty sometimes determines the size of the motor selected, and, in some cases, peak loads become the determining factor.

## Service Factor (General-Purpose Motors)

The nameplates of general-purpose motors (except fractional-horsepower motors) bear a statement:  
"Service factor 1.15 at rated volts and cycles."

(This wording has been standardized by the National Electrical Manufacturers' Association for use by all member motor manufacturers.)

The *service factor* is a multiplier, which, applied to the normal horsepower rating, indicates a permissible loading within the accepted safe limits of temperature rise for the insulation. Of course, all guarantees of efficiency, power factor, etc., are based on the normal horsepower rating, and do not apply at the horsepower rating obtained by using the service factor.

This service factor of 1.15 may be used for any general-purpose motor (except fractional-horsepower motors) as defined above, even though the nameplate does not bear the service-factor clause.

As an example of the application of the service factor, assume that a purchaser has a load which requires 55 hp. as a maximum. Instead of using a 60-hp. motor, as heretofore, a 50-hp. motor may be used (as the service factor indicates a permissible loading of  $50 \times 1.15 = 57.4$ ), provided the starting and maximum torques of the 50-hp. motor are sufficient and the rated voltage and frequency are maintained.

## Ball-Bearing Motors

The application of grease-packed ball bearings is especially advantageous:

1. Where the motor frame does not remain in a stationary position after installation.
2. Where the motor is located in an inaccessible place.

The selection of the type of bearing, i.e., ball or sleeve, is largely one of individual preference, since both of these types, when properly selected, applied, and maintained, will give excellent service.

## Voltage and Frequency Range

Motors will operate successfully under the following conditions of voltage and frequency variations, but not necessarily in accordance with the standards established for operation at normal rating:

Where the variation in voltage does not exceed 10 per cent above or below normal.

Where the frequency variation does not exceed 5 per cent above or below normal.

Where the sum of the voltage and frequency variation does not exceed 10 per cent (provided the variation in frequency does not exceed 5 per cent) above or below normal rating as stamped on motor nameplate.

The starting and maximum running torque of a.c. induction motors will vary as the square of the voltage, the speed varying directly with the frequency.

## Control

Dial-type rheostats are used only where starting requirements are not severe, and starting is infrequent. Hand (except drum-type) control is used where starting service is infrequent. Remote magnetic control is used where starting is frequent; where control is used in conjunction with various pilot auxiliaries, as pressure or float switches; where it may be desirable to place control some distance from motor, yet have full control over it at all times, such as with push-button stations.

For all applications involving reversing service, engineering recommendations should be obtained.

## Full-Load Speeds of Motors

The full-load speeds of synchronous and d.c. motors and of all gear-motors are as listed in the motor ratings. The full-load speeds of induction motors are less than the synchronous speeds listed and approximate the speeds shown in the accompanying table.

Approximate Full-Load Speeds of Induction Motors

Syn- chronous RPM.	Poly- phase Type K	Poly- phase Type KG	Poly- phase Type M	Single- phase Type KC	Single- phase Type SCR

## G-E Tri-Clad Squirrel-Cage Induction Motors

Type K—Normal Starting Torque  
Type KG—High Starting Torque  
1/3 to 200 Hp., Constant-Speed, 2 and 3-Phase,  
\*60 Cycles, Continuous Duty, 40°C. Rise

Tri-Clad Open (Drip-Proof), Sleeve-Bearing Motor

### Type K—Normal Starting Torque

The Type K induction motor is suitable for either full voltage or reduced voltage starting depending upon the permissible starting current of the particular application. It has the highest efficiency and power factor of all the standard lines of induction motors, and is well fitted for driving pumps, fans, blowers, line shafting, and similar equipment requiring continuous operation with fairly constant load.

In general, this motor can be used for any application where continuous operation and constant speed are required, together with a fairly constant load.

### Type KG—High Starting Torque

The Type KG motor has high starting torque and low starting current and is intended to supply the need for motors having a higher percentage of starting torque than can be obtained from the Type K motors with full voltage applied, yet having a starting current equal to the Type K motor, together with high full-load efficiency and power factor.

Recommended for such drives as compressors without unloading valves, conveyors which must be started loaded, and other applications requiring high starting torque.

Type KG motors starting at full voltage should be applied only where high torque at start is actually required and only when the driven mechanism will not be injured by the sudden application of this torque. This latter caution applies especially to drives or driven machines utilizing belts, either of the flat or V type, chains, or other flexible or flat elements.

Hp. at 40°C.	Frame	Sync. Speed RPM.	†Volts	Type K Only	
				Sleeve Bearing Each	Ball Bearing Each

\*Listed open motors will operate on 50 cycles at maintained voltages without injurious heating, except that motors in Frames 364 and larger rated 720 rpm. and lower must be specifically ordered for 50-cycle operation. The 60-cycle horsepower ratings and prices apply. Synchronous speeds are 5/6 of those at 60 cycles.

†All standard 220 and 440-volt polyphase, squirrel-cage motors in Frames 203 to 445 inclusive have sufficient leads brought out so that they can be connected for either 220 or 440 volts.

‡These motors are recommended for direct connection only. For motors in Frames 444S and larger, 3600 rpm., state direction of rotation.

## G-E Tri-Clad Totally Enclosed and Totally Enclosed, Fan-Cooled Squirrel-Cage Induction Motors

### Type K—Normal Starting Torque

Standard and Explosion-Proof—Enclosed,  $\frac{1}{4}$  to 5 Hp.; Fan-Cooled,  $\frac{3}{4}$  to 200 Hp.

Constant Speed, 2 and 3-Phase, 60 Cycles, Continuous Duty, 55°C. Rise

Type K Totally Enclosed Motor

Type K Totally Enclosed, Fan-Cooled Motor

General Electric has a complete line of totally enclosed motors which have been tested and listed by the Underwriters' Laboratories for Class I, Group D (gasoline); Class II, Group E (magnesium or aluminum dust); Class II, Group F (coal or coke dust); and Class II, Group G (grain dust) service. Motors must be specified for the respective service in order that they may bear the proper Underwriters' label indicating their suitability for the conditions applied.

In the smaller ratings, motors are built in totally enclosed (not fan-cooled) frames. In the larger ratings, the totally enclosed, fan-cooled design is standard. The latter type permits total enclosure of a motor, yet allows full open-motor horsepower rating in those sizes which would otherwise require frames larger than those of open ratings.

The fan-cooled type of enclosure essentially involves motors totally enclosed with an additional housing which has an external fan mounted at the end opposite the pulley. This fan draws air and directs it over the motor frame along especially designed ventilating paths, and exhausts it at the pulley end. The fans on the motor rotor keep the air inside the motor agitated, thus dissipating heat from the motor to the frame.

The explosion-proof motors are furnished with an external fan, made of nonsparking metal, similar to that on the standard totally enclosed, but otherwise fan-cooled motors.

\*All standard 220 and 440-volt polyphase, squirrel-cage motors in Frames 204 to 505 inclusive, except those 2-phase ratings as noted, have sufficient leads brought out so that they can be connected at the terminal board for either 220 or 440 volts (except 60 hp., 900 rpm.; 75 hp., 1200 rpm.; and 100 hp., 3600 and 1800 rpm.).

†Not Tri-Clad.

‡Size for standard construction only. Explosion-proof ratings are built in a larger frame size.

§Two-phase motors in these ratings are not reconnectable for 220-440 volts.

¶These motors are recommended for direct connection only. Orders should specify direction of rotation.

||Class II, Group E, motors available in Frames 505 and smaller only.

\*\*Two-pole, 3600 and 3000-rpm. motors in Frames 504S and larger, will be furnished with oil-lubricated sleeve bearings as standard.

## G-E Tri-Clad General Purpose Wound-Rotor Induction Motors

Type M—Constant-Speed and Adjustable-Varying-Speed  
½ to 200 Hp., 2 and 3-Phase, 60 Cycles, Continuous Duty, 40°C. Rise

Type M Tri-Clad Wound-Rotor Motor

Type M wound-rotor induction motors have both constant and adjustable-varying-speed characteristics, the desired speed characteristics being obtained by selecting controllers of the proper types. This type of motor is suitable for constant-speed applications requiring frequent starting or reversing under heavy load, or where exceptionally high starting torque is encountered. It can also be used on applications requiring adjustable-varying-speed characteristics. For this type of service, the speed can be adjusted by any value over a considerable range but, once adjusted, will vary with change in load.

Open 40°C. rise, Type M, 60-cycle, polyphase motors will operate without injurious heating on 50-cycle circuits of 110, 220, 440, 550, and 2300 volts (except that motors in Frames 364 and larger, rated 720 rpm. and lower, must be specifically ordered for 50-cycle operation, if required). Sixty-cycle horsepower ratings and prices apply. Synchronous speeds are 5/6 of those at 60 cycles.

\*The horsepower output at 50 per cent below normal speed will be approximately 40 per cent of normal horsepower without injurious heating. †Motors for 220 and 440 volts in Frames 505 and smaller, but not exceeding 75 hp., are dual-voltage, 220-440 volts, except for a few 2-phase ratings marked.

‡Motors in these frames are not Tri-Clad. §Two-phase motors in these ratings are for single-voltage only. ¶These motors are recommended for

direct connection only. For motors in Frames 444S and larger at 3600 rpm, orders must state direction of rotation (viewing end opposite driving end) desired so that fan may be properly arranged for ventilation. The temperature ratings of 3600-rpm. motors in Frames 504S and larger are 40°C. rise on stator and 75°C. rise with Class B insulation on rotor. ¶Three-phase motors only. \*\*This motor will be furnished as standard with sleeve bearings only.

### G-E Integral-Hp. Single-Phase Capacitor-Type Tri-Clad Induction Motors

Type KC—Normal Starting Torque  
Type KCJ—High Starting Torque

Type KC Normal-Torque Motor

Open, Horizontal, Constant-Speed, Dual-Rotation  
60 Cycles, 40°C. Rise, Continuous

The Type KC motor is designed for applications requiring moderate starting torques.

The Type KCJ motor is designed for applications requiring high starting torque.

	1800						

\*Motors for 110 and 220 volts are available at same prices corresponding to motors for 115 and 230 volts. †An automatic-reset, thermal-overload device used as a line-interrupting switch. The usual short circuit protection is also required in accordance with the National Electrical Code.

### G-E Type SCR Integral-Horsepower Single-Phase Repulsion-Induction Motors

Open, Horizontal, Constant-Speed, 60 Cycles  
40°C. Rise, Continuous

The Type SCR motor combines the high starting torque of a repulsion motor with the excellent speed characteristics of an induction motor. It is available in ratings which supplement those of the Types KC and KCJ capacitor motors. Some of the many applications for which it is well adapted include refrigerating machines, pumps, stokers, floor surfacers, and dairy machinery.

### G-E Type KH Split-Phase Fractional-Horsepower Industrial Motors

Single-Phase, Dripproof, General-Purpose  
Sleeve-Bearing, Resilient Base

60 Cycles, 40°C. Rise, Continuous, Constant-Speed

Type KH resilient-base motors are recommended where long-lived, inexpensive motors with moderate starting torque are required and where quietness and freedom from vibration resulting from the resilient base are desirable. The resilient base also offers a convenient means for side-wall mounting of the motor.

Frames 43 to 49 are available with automatic-reset Thermo-Tector at slight price addition.

Hp.	Speed RPM.	115 Volts	
		Model No.	*Each

	1725	KH45AB2235	20.25

\*Prices for motors rated 230 volts, or 50 or 25 cycles furnished on request.

### G-E Type KH Split-Phase Fractional-Horsepower Industrial Motors

Single-Phase, Dripproof, General-Purpose  
Sleeve-Bearing, Solid Base

60 Cycles, 40°C. Rise, Continuous, Constant-Speed

Type KH motors are recommended where long-lived, inexpensive motors with moderate starting torque are required. They are ideal for use on belt-driven fans and blowers, office devices, centrifugal pumps, and miscellaneous devices where motors with high starting torque are unnecessary.

Frames 43 to 49 are available with automatic-reset Thermo-Tector at slight price addition.

\*Prices for motors rated 230 volts, or 50 or 25 cycles furnished on request.

### G-E Type K Fractional-Horsepower Industrial Motors

3-Phase, Totally Enclosed, Ball Bearing, Solid Base

60 Cycles, 55°C. Rise, Continuous, Constant-Speed

Type K totally enclosed motors with steel base and ball bearings are for general application and have a wide field of use where long life, ability to withstand end thrust, and protection from dirty atmospheric conditions are necessary. They will start and drive any device which can be operated by single-phase motors of corresponding strength.

### G-E Type KC Capacitor-Start Fractional-Horsepower Industrial Motors

Single-Phase, Dripproof, General-Purpose Sleeve-Bearing, Resilient Base

60 Cycles, 40°C. Rise, Continuous, Constant-Speed

These motors are designed for high starting and pull-up torque. They are for use in general applications where dripproof sleeve-bearing motors are suitable and where quietness and freedom from vibration resulting from the resilient-base mounting are desirable. The resilient-base mounting also offers a convenient means of obtaining side-wall mounting of the motor.

Available with automatic-reset Thermo-Tector at slight price addition.

### G-E Type KC Capacitor-Start Fractional-Horsepower Industrial Motors

Single-Phase, Dripproof, General-Purpose Sleeve-Bearing, Solid Base

60 Cycles, 40°C. Rise, Continuous, Constant-Speed

These motors are designed for high starting and pull-up torque. They are for use in general applications where dripproof, sleeve-bearing motors are suitable, applications such as for water pumps, compressors, and industrial equipment operating in favorable ambient conditions.

Available with automatic-reset Thermo-Tector at slight price addition.

## G-E Fractional Horsepower Utility Motors

G-E utility motors are especially designed and manufactured to provide the casual purchaser with a high quality, low cost source of power for incidental use. Five ratings are available, giving good selection of motors for home workshop and similar uses where close motor application is not required. The motors are distinguished by an attractive blue-gray color and a large yellow nameplate particularly legible and distinctive.

### Model No. 1E152

¼ Hp.—1725 RPM.—115 Volts—60 Cycles Split-Phase

Sleeve bearings, solid base, dripproof. Shaft, 1½ inches long, ½ inch in diameter, with flat. Eight-foot rubber covered cord set with molded-on plug attached to motor.

Model No. 1E152.....each \$13.44

### Model No. 1E153

¼ Hp.—1725 RPM.—115 Volts—60 Cycles Split-Phase

Sleeve bearings, solid base, dripproof. Manual-reset Thermo-Tector. Shaft, 1½ inches long, ½ inch in diameter, with flat, out each end of motor. Eight-foot rubber covered cord set with molded-on plug attached to motor. On-off switch mounted on motor end shield.

Model No. 1E153.....each \$21.66

### Model No. 1E154

½ Hp.—1725 RPM.—115 Volts—60 Cycles Capacitor-Start

Sleeve bearings, solid base, dripproof. Shaft, 1½ inches long, ½ inch in diameter, with flat. Eight-foot rubber covered cord set with molded-on plug attached to motor.

Model No. 1E154.....each \$27.17

### Model No. 1E155

½ Hp.—3450 RPM.—115 Volts—60 Cycles Capacitor-Start

Sleeve bearings, solid base, dripproof. Manual-reset Thermo-Tector. Shaft, 1½ inches long, ½ inch in diameter, with key, out each end of motor. Eight-foot rubber covered cord set with molded-on plug attached to motor. On-off switch mounted on motor end shield.

Model No. 1E155.....each \$38.23

### Model No. 1E156

¾ Hp.—1750 RPM.—115 Volts—60 Cycles Capacitor-Start

Sleeve bearings, solid base, dripproof. Shaft, 1½ inches long, ½ inch in diameter, with key. Built-in conduit box on end shield with easily connected stud terminals.

Model No. 1E156.....each \$44.66

## G-E Gear-Motors

Fractional and Integral-Horsepower Sizes

Polyphase, Single-Phase, and D.C. Types

Fractional-Hp. Capacitor-Type Gear-Motor

Cutaway View of Concentric-Shaft, Planetary-Type Gear Motor

Vertical Gear-Motor of Totally Enclosed, Fan-Cooled Induction Design

G-E gear motors are the most economical means of obtaining a dependable source of power for operation of many types of machines. The gear-motor consists of a normal-speed motor in combination with a built-in reduction gear. The combination results in an integral, self-contained unit that is highly efficient, extremely compact, and sturdily built.

General Electric offers a complete line of gear-motors in ratings from  $\frac{1}{8}$  horsepower up. A wide selection of output-shaft speeds is available, ranging from 780 to 5.7 rpm. with standard 1800-rpm. motors. Three basic gear systems are used as follows: (1) Offset shaft, for speeds of 780 to 520 rpm., (2) Planetary, for speeds of 520 to 13.5 rpm., and (3) Right-angle worm, for speeds of 197 to 5.7 rpm.

Gear-motors have a higher operating efficiency than any other type of low-speed drive of comparable installation cost. The motor, running at 1800 rpm., operates at its maximum efficiency and power factor. The gear-type transmission prevents slippage. The motor and gear are closely connected, minimizing mechanical losses.

Gear motors save space. G-E gear-motors have a compact, balanced arrangement of parts and a housing of small physical proportions. They require only slightly more mounting space than a standard motor.

Gear-motors reduce maintenance costs. The inherent smoothness of operation and the sturdiness of G-E gear-motors permit them to operate dependably with little more attention than an infrequent change of lubricant. The simple design, careful workmanship, adequate lubrication, and ample factors of safety in all parts mean long, reliable service and freedom from production delays.

G-E gear-motors are unusually quiet. Gears running in oil and a balanced distribution of load between multiple gears eliminate the noises usually associated with geared speed reduction.

Gear-motors are easy to install and are safe to operate. The concentric output shaft of the planetary system and the gear-motor's similarity in physical proportions to a general-purpose motor contribute to low installation costs.

The elimination of the need for leveling bases and for providing safety devices for couplings and external chains, gears, or belts reduces installation costs and contributes toward safety.

Typical applications of gear-motors include the following:

Machine Tools  
Conveyors  
Agitators  
Fans  
Mixers  
Cooling Towers  
Compressors  
Pumps  
Steering Gears  
Winches, Davits  
Kilns  
Grinders

Car Pullers  
Blowers  
Screens  
Hoists  
Ball and Pebble Mills  
Textile Machinery  
Steel Mills  
Elevators  
Line Shafts  
Valves, Gates  
Rolls  
Sewage Equipment

## G-E Integral-Horsepower Gear-Motors

## Concentric-Shaft—Planetary Gear-Reduction

Type K—Normal Torque—Normal Starting Current—Squirrel-Cage—2 and 3-Phase—60 Cycles—220, 440, or 550 Volts  
 Type KC—Single-Phase—Capacitor-Type—115-230 Volts  
 Type B—D.C.—Shunt-Wound—115-230 Volts

The listed integral-horsepower gear-motors are for Class I service, which in accordance with recommendations of the American Gear Manufacturers' Association, is for steady loads not exceeding the normal rating

of the motor and eight hours service per day, or for moderate shock loads where the service is intermittent.

## G-E General-Purpose Synchronous Motors

Type TS, 3-Phase—Type QS, 2-Phase

High-Speed—Open—Horizontal—2 Bearing—60 Cycles  
40°C. Rise—Continuous

Tri-Clad Synchronous Motor with Direct-Connected Exciter

G-E general-purpose synchronous motors make complete, compact power units which simply require connection to an a.c. power supply for operation. They are especially advantageous where (1) good power factor is desired, (2) where power-factor improvement is needed, (3) where high efficiency is sought (in the case of steady, continuous loads of 75 hp. and larger), or (4) where exact speeds must be maintained. These motors have a mechanical simplicity comparable to that of squirrel-cage motors. Where direct-connected exciters are used, the exciter forms an integral part of the motor structure and saves both space and installation cost over other types.

The well known Tri-Clad construction is available in many commonly used ratings. (See price listings.) This

\*Motor with shaft and two bearings.

†Tri-Clad (drip-proof).

Synchronous Motor with Exciter, Typical of Skeleton-Frame Construction

construction offers the benefits of smooth contours, attractive appearance, and extra physical protection to the synchronous motor line.

G-E synchronous motors are particularly suited for driving centrifugal pumps, centrifugal compressors, belt-driven reciprocating compressors, fans, blowers, line shafts, d.c. generators, rubber and paper mills, and the like.

### G-E Direct-Current Motors

Type B, Frames 204 to 284—Type CD, Frames 66 and Larger  
Open—Horizontal—Constant and Adjustable Speed

Type B or CD Motor, Typical of Frames 204 to 284 and Frames 66 to 95

Their flexibility permits close matching of motor speed to the driven load. Choices of speed and torque characteristic provide a selection of motors tailored to suit the application requirements—whether they be for heavy-starting duty, for widely varying speed, or subject to speed change with change of load.

Use constant-speed motors (1) where the power supply is d.c., (2) where it is desirable to obtain a large variety of accurately controllable speeds over speed ranges less than 3:1 from a constant voltage source, or (3) where an adjustable-voltage system is used for speed control from near zero speed to maximum. Typical applications include centrifugal pumps, fans, blowers, etc. Use adjustable-speed motors where speed ranges of 3:1 or greater are required by field control. Adjustable-speed motors of constant horse-power, continuous rating are suitable for such applications as driving metal, paper and textile winding reels. Motors of constant horse-power, one-hour rating are selected for lathes, planers, etc. Motors of tapered horse-power, continuous rating are used in driving centrifugal pumps, fans, blowers and paper making machines. Select shunt-wound motors for medium starting duty and close speed regulation. Select compound-wound motors for use where heavy starting torque is required.

\*Tapered Horsepower: From basic speed up to 150 per cent basic speed, motor delivers minimum rated horsepower with temperature rise not exceeding 50°C. Above 150 per cent basic speed, temperature rise will not exceed 40°C.

Constant Horsepower: From basic speed up to 150 per cent basic speed, temperature rise will not exceed 50°C. Above 150 per cent basic speed, the temperature rise will not exceed 40°C.

# GENUINE G-E RENEWAL PARTS

Observe these few simple rules in ordering renewal parts, and you will save time, get the parts you need, and have your electric equipment back in first-class operating condition with little delay.

1. Give complete nameplate rating of apparatus requiring parts.
2. Give quantity of each part.

3. Give catalog number of each part, using the G-E renewal-parts catalog or bulletins.

4. Give exact description of each part.

5. When immediate delivery is essential, telephone your order to us. The part you need is probably carried in stock.

If you do not have a copy of the General Electric renewal parts catalog, ask for one. It's free. It will help you to order parts quickly and correctly.

In addition to the items pictured, this catalog lists rubber mountings and capacitors for small G-E motors, parts for G-E industrial heating devices, street-lighting equipment, and floodlights; and gives data on supplies for G-E recording instruments, magnet wire, and testing instruments. Ask your nearby Graybar office or warehouse for a copy.

**G-E CR1061 Motor Starting Switches****For Fractional-Hp. Motors—Manually Operated**

Maximum Ratings { A. C. { Single Pole, 1 Hp., 110 to 220 Volts  
 { Double Pole, 1 Hp., 110 to 220 Volts  
 { D. C. { Single Pole, 1 Hp., 115 to 230 Volts  
 { Double Pole, ¾ Hp., 115 to 230 Volts

Listed by Underwriters' Laboratories, Inc.

**For Wall Mounting**

This small, compact, hand-operated starting switch incorporates positive overload protection. It is designed for use with fractional-horsepower motors, and can be supplied for a.c. or d.c. circuits.

For flush-mounted type, order an open-type switch by nomenclature designation and number. For a single switch, order from a local dealer the following material: one flush plate—No. GE2316 Textolite or No. GE1701 brass; and one conduit box 2½ inches deep—No. SP6971 for rigid conduit and No. SP6972 for BX or flexible conduit. For gang mounting, specify flush plate and/or conduit box "similar to number" and state number of switches to be

included in gang.

For all other types, order switch by nomenclature designation and number. Order one heater for overload device by number. Select heater, from table at bottom of this column, in accordance with full-load motor current.

Example: 1 CR1061-C1A, motor starting switch  
 1 No. 81D70 heater

**Open Type—Also for Flush Mounting**

\*Prices include one overload device heater which must be ordered separately. Heater may be omitted or additional heaters may be ordered at 75 cents each.

†Open type is adaptable to flush mounting when used with standard (2½ inches deep) conduit box and flush plate.

No. 5187946G1 replaceable solder-film-type overload device, 60 cents each.

**Heaters for Thermal Overload Devices**

Interchangeable heaters are available for a variety of motor current ranges as shown in the table below.

Listed values are for motors rated 40°C. continuous. For motors rated 50°C. or 55°C. continuous, use heaters one size smaller than listed.

**G-E CR1062 Motor Starting Switches****For Small A.C. Motors—Manually Operated**

25, 40, 50 and 60 Cycles

**Two CR1062-C5 Switches Mounted on Pedestal**

These switches are single throw with double-break contacts. Overload protection is provided by means of hand-reset thermal overload device, and are used for throwing small a.c. single or 3-phase 60, 50, 40 or 25-cycle motors directly across the line. Operating mechanism trips free from handle. Contacts are of silver.

Cases have conduit knockouts and sufficient wiring space for No. 8 line wires with soldered terminals. Protects against single-phase operation of polyphase motors.

Order by CR number and switch number and form number. Also give rating of motor with which switch is to be used. Specify if heaters are required for overload protection.

### G-E CR1026 A.C. Enclosed Starting Rheostats

For Single-Phase Repulsion-Induction Motors  
40, 50 and 60 Cycles, Single-Phase

May be used with motors that do not require more than 150 per cent torque to start or longer than 30 seconds to attain full speed. Complies with N.E. M.A. Standard Resistor Classification No. 135.

Primarily for use

with the single-phase repulsion-induction motors (Type SCR) where the inrush of current resulting from throwing the motor directly upon the line is objectionable. When started by being thrown directly upon the line, it requires from 250 to 300 per cent full-load current. While in many cases this starting current may not be objectionable, it is recommended that a starter be installed in every case with the 7½ and 10-hp. motors and with the smaller motors when it is desired to reduce the starting current.

Starter for use with motors up to and including 5-hp. 110 volts and 7½-hp. 220 volts is provided with button contacts. Larger size has renewable segments.

Motor Hp.	110 Volts Each	220 Volts Each	440 Volts Each
Up to 1	\$30.80	\$30.80	.....
1½	33.60	33.60	.....
2	33.60	33.60	.....
3	33.60	33.60	.....
5	36.00	36.00	.....
7½	69.00	50.00	\$53.00
10	70.00	74.00	53.00

When ordering state CR Number of rheostat and hp., voltage and frequency of motor.

### G-E CR1034 A.C. Manual Reduced Voltage Starters

For Squirrel-Cage Induction Motors

For starting squirrel-cage induction motors on applications requiring not more than 15 seconds to attain full speed, once every 4 minutes for an hour.

Consists of an auto-transformer with taps, a switching device, an instantaneous undervoltage protective device and a hand-reset overload relay.

For wall mounting. The 2200-volt size is floor mounted. Switch is oil immersed. Can be furnished with ammeter attachment (including ammeter) at \$90. additional.

When ordering, specify the complete motor rating. Order ammeter attachment if desired.

220, 440, 550-Volt Motor Rating

### G-E CR7006 A.C. Magnetic Switches

For Throwing Single, 2 or 3-Phase Motors  
Directly on the Line

25, 50 and 60 Cycles

CR7006-D50B, Size 0,  
with Cover Removed

CR7006-D30B, Size 2,  
with Cover Removed

These switches consist of a 2 or 3-pole magnetically-operated contactor with overload relays mounted on a base and enclosed in a suitable case. Provides undervoltage protection or release. May be operated by means of a push button station, float or pressure switch, etc.

Prices will be quoted on request on these switches designed specially for installation in dusty or corrosive atmospheres or in Class I Group D hazardous gas locations.

Order by CR number and specify rating of motor with which to be used and heater units required for overload protection.

G-E CR7008 A.C. Combination Magnetic Switches

Full-Voltage Starters for Induction Motors

Air-Break or Oil-Immersed—Undervoltage Protection or Release—Thermal Overload Protection  
Maximum Voltage, 600—25-60 Cycles—3 or 2-Phase

Size 1 Fusible Switch in Type 1 General-Purpose Case

Size 1 Switch with Air Circuit Breaker in Type 1 General-Purpose Case

This combination device consists of a standard full-voltage starter enclosed in the same case with a motor-circuit switch or an air circuit breaker, operated from the outside of the case. Fusible motor-circuit switches can be furnished with the air-break switches.

A CR7008 combination magnetic switch and a CR2940 momentary-contact "start"-"stop" push-button station make a simple and reliable equipment for starting a small alternating-current motor. The combination provides complete protection to both the motor and the operator. The switch and push-button station are completely enclosed, which prevents accidental contact with any live parts.

These switches can be used with any pilot control, such as float switches or pressure governors. They also are suitable for use as primary switches in connection with wound-rotor motors.

The fuse clips will accommodate fuses for average values of motor current when the fusing practice is in accordance

with the 1937 National Electrical Code recommendations, which require that:

- 1. Squirrel-cage motors should be fused at not more than 300% of rated motor current.
- 2. High-reactance motors rated at not more than 30 amperes should be fused at not more than 250% of rated motor current, or, if rated at more than 30 amperes, should be fused at not more than 200% of rated motor current.
- 3. Wound-rotor motors should be fused at not more than 150% of rated motor current.

Fuse clips must likewise be of a size which will accommodate the maximum rating of fuse calculated in accordance with the above percentages. It is always desirable to check the fuse-clip recommendations for a particular value of motor current, to insure that a fuse of suitable size can be used. In no case should the size of fuse used exceed 400% of rated motor current.

†Also available in Type 5 Dust-Tight case.

Heaters for above switches are listed on another page.

## G-E CR7009 A.C. Magnetic Reversing Switches—Sizes 1, 2, 3 and 4

110 to 600 Volts—Up to 100 Hp.

G-E Type CR7009 Magnetic Switches are suitable for use with reversing motors which are thrown directly across the line or which are controlled by automatic starters. Each switch consists of two mechanically interlocked, magnetically operated, three-pole contactors with overload relay. The entire assembly is mounted in a suitable enclosure. The switches can be controlled remotely through push-button stations, limit switches, or other pilot devices.

**Undervoltage Protection or Release.** These switches are ordinarily operated by a momentary-contact Forward-Reverse-Stop push-button station. A normally open interlock is furnished on both the forward and the reverse contactors of all sizes of switches, and completes the holding circuit.

**Overload Protection.** Each switch is provided with a two-element hand-reset thermal overload relay. Provision is made for external resetting of the overload relays on Sizes 1 to 3 inclusive. On Size 4, it is necessary to open the door to reset the relay.

**Type 1, General-Purpose Enclosures.** Sizes 1 to 3 switches are enclosed in wall-mounted cases which have covers hinged on the side and which are held closed by clasps. Size 4 is provided with a floor-mounted case.

**Ordering Directions.** Order a magnetic reversing switch by CR number and complete number (root number plus suffix number).

Order a relay or two heaters from table at the bottom of this page.

Order CR2943-A300A push-button station separately.

### Accessories

Two-Button Station for General Purpose Applications

Master Switch Control Station

These magnetic reversing switches are generally controlled by push-button stations. They can also be controlled by a small master switch. Many applications, such as motor-operated doors and windows, valves and machine tools, require either a geared-type or track-type limit switch in addition to the reversing switch and push-button station. Complete information and prices will be furnished on application.

## G-E CR7051 A.C. Magnetic Reduced Voltage Starters

For Squirrel-Cage Induction Motors  
60 Cycles

Size 1 Starter

Provides remote control for constant-speed squirrel-cage induction motors on compressors, blowers and any application that does not require longer than 15 seconds to attain full speed, once every 4 minutes for an hour.

Consists chiefly of an autotransformer for supplying reduced voltage to motor during acceleration, accelerating contactor which connects autotransformer to line and motor to low-voltage taps, line contactor, temperature overload relay, a definite time relay which causes accelerating contactor to open and line contactor to close after a predetermined time.

### Size No. 1—3-Phase, 3-Wire

Ammeter Attachment (Includes Ammeter)...each \$90.00

\*Price is for compensator, relay heater units and push-button station. Relay heater units may be omitted or additional ones supplied at 75 cents each; push-button station may be omitted or additional ones supplied at \$2.50 each.

†No. does not include relay heater units.

## G-E Synchronous Motor Controllers

2 or 3-Phase, 3-Wire 50 or 60 Cycles  
Undervoltage Protection (Time Delay above 600 Volts)  
Thermal Overload Protection of Stator and Squirrel-Cage Windings  
Automatic Speed-Responsive Field Control

Typical CR7061 Reduced-Voltage Magnetic Controller for Low-Voltage Application (below 600 Volts)

Available in three types: full-voltage, magnetic; reduced-voltage, magnetic; and reduced voltage, semi-magnetic. Magnetic controllers are controlled by push buttons, whereas semi-magnetic controllers are equipped with manual starting devices. Both types have automatic field application and removal equipment.

The following equipment is common to all types: a.c. line ammeter, d.c. field ammeter, field applying contactor and field discharge contactor with discharge resistor; slip cycle impedance relay and auxiliary devices to apply field at critical speed and favorable angle and to remove field on pull-out within first slip-cycle, stator temperature overload relay and temperature squirrel-cage protective relay, and drilling for exciter field rheostat.

The full-voltage magnetic controllers employ a magnetically operated contactor for connecting the motor to the line, and the semi-magnetic type is equipped with a manually-operated compensator.

Reduced-voltage magnetic controllers are furnished with starting and running contactors and an auto-transformer for supplying reduced voltage to the motor in starting. The accelerating time is automatically determined by a Telechron motor operated transfer relay, which is adjustable.

The reduced-voltage semi-magnetic controllers are similar to the magnetic type except that the starting and running devices are manually-operated.

## Cabinetrol Unit Control Cabinets

A dead-front unit control cabinet which is completely assembled at the factory, so that the user needs only to make connections for his motor and control cables at the time of installation.

Each individual panel is completely coordinated to give proper short circuit protection to bus, wiring, and all branch circuits. Thermal protection is provided for each individual motor circuit.

Case is made from special, smooth  $\frac{3}{32}$ -inch sheet steel with welded outside joints which are seam welded and ground to a smooth finish.

Each compartment has its own door and is segregated from the neighboring compartments by steel barriers.

Doors are of the pan type with edges turned back 90° and mounted on fully concealed hinges. Doors close into deep, L-shaped flanges providing a construction which effectively excludes dust. Each door is equipped with T-shaped operating handles and provided with key-operated cylinder locks. A engraved Textolite nameplate on each door identifies each control unit.

**Operating handles** for motor circuit switches and breakers, except incoming line breakers, are mounted on the compartment doors.

**Operating mechanisms for incoming line breakers** are inside of the door to prevent unintentional shutdown of entire equipment.

**Operating mechanisms for motor starters** are so interlocked that the door cannot be opened unless the handle is in the Open position. A locking bar is provided for all motor-starter mechanisms so that they can be padlocked in either the On or Off position. A reset button is provided in the door of each compartment for resetting the overload relay with the door closed.

**Terminal boards** are accessible through full-length rear doors whose handles have cylinder-type, key-operated locks.

**Furnished with a 4-inch lifting angle** to facilitate installation.

**Starters** are available for synchronous, squirrel-cage, or wound-rotor motors requiring up to N.E.M.A. size 6 contactors. Either reduced-voltage or full-voltage, reversing or non-reversing control units are available.

Can be arranged for throat connection to the source of power.

All devices, including starters, transformers, reactors, rheostats, resistors, meters, or instruments are wired, assembled, and tested at the factory. Push button stations, selector switches, and indicating lights can be mounted on the doors of standard compartments. Dry-type transformers up to  $7\frac{1}{2}$  kilovoltamperes, for control or lighting, can be installed, if required.

Available in 24 or 40-inch depth.

Pearl-gray lacquer finish is standard.

## G-E CR1003 D.C. Enclosed Heavy Duty Starting Rheostats

For Series, Shunt or Compound-Wound Motors

N.E.M.A. Resistor Class.

Up to 30 Hp., 32 & 115 Volts; 50 Hp., 230 & 350 Volts; No. 115  
Above 30 Hp., 32 & 115 Volts; 50 Hp., 230 & 350 Volts; No. 135

This heavy duty starting rheostat affords a convenient, simple means of providing starting and smooth acceleration for all kinds of d.c. motors.

Provides undervoltage protection.

Order by CR number and number and state rating of motor with which rheostat is to be used.

## G-E CR4052 D.C. Definite Mechanical Time Starters

Constant Speed—Non-Reversing—Non-Jogging—Without Dynamic Braking

Maximum Rating, 5 Hp., 115 Volts; 10 Hp., 230 Volts

Typical CR4052-A1L Starter with Cover Removed

CR4052-A1L and -A2L starters are non-reversing, non-jogging, general purpose starters designed for use with constant-speed direct current motors up to 5 hp. 115 volts and 10 hp. 230 volts. They consist of a solenoid-operated multifinger contactor and a temperature overload relay (either hand or automatic reset), all mounted on a molded Textolite base on the back of which is mounted the Class 115 starting resistor. The multifinger contactor has a blowout and arc chute on the line contact to interrupt the arc quickly.

The starters can be applied, within their rating, to constant-speed motors up to and including 1800 rpm. that do not require more than 150% full-load torque to start nor longer than 10 seconds to attain full speed. Before using these starters on 3600-rpm. motors, or on motors that require longer than 10 seconds to attain full speed, the application should be checked with the nearest district office. These starters provide isothermic overload protection, hand or automatic

reset, and undervoltage protection or release depending on the accessory used.

Supplied in N.E.M.A. Type 1 enclosing case.

Order by number and form, and specify motor with which starter is to be used. Order relay heater from table below.

Non-reversing, non-jogging pushbutton stations; CR-2943A200A, \$2.50; CR2940-2A1, \$7.50.

## Heaters for Thermal Overload Devices

Listed values are for motors rated 40°C. continuous. For motors rated 50°C. continuous, use heaters one size smaller than listed.

\*Price includes relay heater, but no pushbutton station. Relay heaters may be omitted or additional ones supplied at 75 cents each.

## G-E CR2940 Pushbutton Stations

CR2940 pushbutton stations are primarily intended for use in the control circuits of various magnetic controllers. The large contacts and substantial construction of these heavy-duty stations make them well able to withstand the frequent operation and ordinary rough usage of machine tool and similar applications.

The stations listed are divided into three general classes: momentary contact, maintaining contact and a combination of momentary and maintaining contacts. With a momentary contact the circuit is completed or interrupted only as long as the operator's finger depresses the button. This feature is required when the station is used with a controller that must provide under-voltage protection. A maintaining contact holds the circuit open or closed as does an ordinary knife switch.

Available in two sizes: standard-duty, suitable for use with contactors up to and including 150 amperes, and heavy duty, for use with any size contactor.

Typical 3 Button Station for Front-of-Panel or Wall Mounting

## General-Purpose, Momentary-Contact—Single Button

Nomenclature	Nameplate Markings	Duty	Each
CR2943-A100A	Stop.....	Standard	\$2.50

## G-E CR2931 Enclosed Float Switches

For A.C. or D.C. Motors

Form D

Form P

Suitable for use in the control circuit of a.c. or d.c. automatic starters, and, except for the Form P, can directly handle the circuits of small motors.

These switches, as furnished, are arranged for tank operation, that is, the switch closes as the lower liquid level is reached, and opens as the top level is reached. This action may be easily changed for sump operation by interchanging the float and counterweight. Standard floats should not be subjected to pressure. Quotation on special floats will be furnished on request.

All switches are drip and splash-proof and suitable for outdoor installation where they are not subjected to snow or sleet. Where the liquid whose level is to be controlled is subject to freezing, a float switch should not be used.

All switches are quick acting when closing and opening, and this insures a minimum of arcing and burning of the contacts.

Form	No. of Poles	Description	Each
A	Dbl.	For Clamping to Inside Top Edge of Tank; Operated by Rod and Float; Range, 10 Inches to 5 Feet.....	\$46.
A	4	Same as Form A Double-Pole.....	51.
B	Dbl.	For Bolting to Tank Cover; Requires Guide in Cover for Operating Rod; Range, 10 Inches to 3½ Feet.....	49.
B	4	Same as Form B Double-Pole.....	54.
C	Dbl.	For Bolting to Tank Cover; Range, 10 Inches to 3½ Feet.....	51.
C	4	Same as Form C Double-Pole.....	56.
D	Dbl.	†For Bolting to Tank Cover; Operated by Chain and Float; Suitable for Any Depth of Tank or Any Variation in Water Level Not Less Than 10 Inches	*51.
D	4	†Same as Form D Double-Pole.....	*56.
L	Dbl.	†Operated by Chain and Float; For Any Variation in Water Level Not Less Than 5 Inches.....	*36.
M	Dbl.	Rod-Operated; Range, 2½ In. to 4½ Ft.	36.
P	Sgl.	§Operated by Chain and Float; For Any Variation in Water Level Not Less Than 2 Inches.....	†20.
AW	Sgl.	Same as Form P, Except with Mercury-Tube, Heavy Duty Connectors.....	†23.

Order by CR and Form numbers. Specify number poles of switch.

\*Price includes 15 feet of bronze chain. If more is required add 15 cents for each additional foot.

†Price includes 15 feet of brass chain. If more is required add 5 cents for each additional foot.

To obtain maximum operating range: †Deduct 3½ feet from length of chain; §deduct 1½ feet from length of chain.

## G-E CR9440 Lever-Type Limit Switches

CR9440-J1D

The No. CR9440-J1D is a sturdy, lever-operated limit switch enclosed in a strong, die-cast case and a moulded phenolic cover. Its oilproof construction and single-pole, double-throw, double-break silver contacts of snap-action design make it very suitable for machine tool and miscellaneous service.

Complete operation of the switch is obtained by a 12 degree travel of the lever with an overtravel of 24 degrees in either the clockwise or counterclockwise directions of rotation.

As supplied by the factory, this switch is arranged for clockwise operation, looking at its cover side. The direction of operation can be reversed by removing the base plate and transferring the return spring to the opposite side of the swing bar.

CR9440-B1B

With Side Plate Removed

Closed

A heavy-duty, snap-action, single-pole, double throw switch with two independent circuits. This limit switch should be used whenever a small, compact, heavy-duty reversing limit switch is required to open or close a control circuit and where maintained accuracy of operation is of primary importance. Its field of application includes tapping machines, threading machines, grinder tables, welding machines, and other reciprocating machines where a reversing limit switch is applicable.

The contacts are double-break, and both stationary and movable tips are of fine silver to insure long life and dependable operation.

The movable contacts are held in either position by a small Alnico magnet acting on an iron yoke. When the yoke is broken away from the magnet face, by direct mechanical action of the operating lever, a sturdy spring snaps the contact assembly to the opposite position, where it is held in by the same Alnico magnet until the yoke is broken away in the opposite direction. For this reason, the operating point is determined entirely by the position of the operating lever and is independent of tension in the spring. This construction insures maintained accuracy of operation in spite of changes in spring tension caused by aging under repeated operation.

Switch is enclosed in an oiltight steel enclosing case with two gasketed side plates and an opening in the rear for 1/2-inch conduit connection. With the side plates removed, the terminals are easily accessible and large working clearances make the switch easy to wire and install.

CR9440-D2

A lever-operated, push-rod-operated or plunger-operated limit switch. All except the plunger-operated form have snap-action contacts. A variety of contact arrangements is available, which can be changed in the field from normally open to normally closed operation, or vice versa. The operating heads can be interchanged, or turned 180°. Holes are provided for mounting the switch on either its back or its side. These features allow maximum flexibility in application.

The switches are available in both open and enclosed forms. The open switches are particularly adapted to built-in applications where space is limited. Frames and plungers are constructed of molded Textolite. The contacts are solid silver and are designed to close with a rolling action. All switches are equipped with flag terminals to accommodate two wires on each terminal. The construction is extremely compact and flexible. The enclosed form has a die-cast case, and is provided with velumoid gaskets and grease seals at shaft journals to make the switch oilproof for machine-tool use.

Application extends to virtually any automatic equipment where a traverse motion must be converted into control of an electric circuit, particularly where the motion is slow and snap-action contacts are necessary to prevent burning of the contact tips.

CR9440-LS416

With Cover Removed

This hatchway-type limit switch is of lever construction, and is particularly for mounting in the hatch of an elevator. Although the switch is light and compact to facilitate mounting where space is limited, it is substantially built and is suitable for severe service. Only a small amount of pressure is needed to operate the roller lever. The Forms A, B and C have a rubber-tired roller to eliminate noise.

The switch is obtainable with either one open, one closed, one open and one closed (with overlapping or non-overlapping contacts), or two closed circuits. The various forms cannot be conveniently interchanged in the field.

### G-E CR9441 Direct-Connected, Rotating-Type Limit Switches

**CR9441-LS424.** This geared-type, general-purpose limit switch has two cam-operated switch elements which make it suitable for limiting travel in two directions.

**CR9441-D2B** is a durable, reversing, rotating limit switch, traveling-nut type, built in a heavy, cast-iron, watertight enclosure. Primarily developed for use with valves, the switch can be used successfully for any application where this type of limit switch is required to limit the range of equipment operation.

\*When using on d.c., a .5-microfarad capacitor is required across the coil of the controlled device.

†Additional contact units up to a maximum total of 14 may be added at \$12.50 each. Specify number of circuits required.

‡Each contact unit has 1 N.O. and 1 N.C. circuit.

§Traveling nut with a total of 8 dripping dogs. Can have a maximum of 14 N.O. and 14 N.C. circuits.

CR9441-D2B

**G-E CR2927 Pressure and Vacuum Switches**

**Diaphragm Type—For Starting Small Motors or for Pilot-Circuit Control**

**Maximum Hp. Ratings:**

**2 Hp. 110 Volts, 5 Hp. 220 Volts, 5 Hp. 440 and 550 Volts A.C. Polyphase**

**1½ Hp. 110 Volts and 3 Hp. 210 Volts A.C. Single-Phase**

**½ Hp. 110 to 550 Volts D.C.**

**Pressure Switch (Cover Removed) with Unloader Valve and Differential-Adjusting Attachment Mounted in Place**

These switches are designed to open or close contacts upon changes of pressure or vacuum of any gas or liquid which will not affect synthetic rubber or brass or steel parts.

Used for starting motors not larger than 2 hp. 110 volts, 5 hp. 220, 440, and 550 volts polyphase; 1½ hp. 110 volts and 3 hp. 220 volts single-phase or ½ hp. 110 to 550 volts d.c. When larger motors are used, these switches can be used in connection with automatic starters which will also provide overload protection.

Order by CR number and specify adjustment if other than factory adjustment is required.

**G-E CR7505 Photoelectric Relays**

**CR7505-K108**

For certain control problems, G-E photoelectric relays offer many definite advantages over more conventional control devices.

All units have an adjustable sensitivity to meet various conditions of phototube illumination, and may be adjusted either to close or to open a circuit upon suitable light change.

A separate phototube holder can be mounted in any position by means of a mounting bracket, which is included.

**CR7505-A100.** This general purpose relay is for indoor application. It has an extended phototube holder, and is often applied where mounting space for the phototube is limited, or where the phototube will be subject to considerable vibration. The use of tubes, which are designed for long life, makes this unit especially desirable for installations which have infrequent inspection. The unit also includes a 15-ampere a-c. contactor for operation of the controlled electric circuit.

**CR7505-N110.** This relay is designed for indoor applications where high speed of response is necessary. The phototube is mounted in a separate holder, complete with 6 feet of shielded cable. The load is handled by a 5-ampere relay.

**CR7505-K2, -K112, -K108.** These general purpose, self-contained relays are applied where a complete photoelectric relay can be mounted to receive the beam of light and where the per cent change in light is adequate. The CR7505-K2 is for a-c. indoor application, CR7505-K112 is for a-c. or d-c. indoor application, and CR7505-K108 is for a-c. outdoor application.

These relays may either open or close the controlled circuit when the light beam is interrupted. The relay tips are rated 1 ampere at 110 volts a.c., and will operate small magnetic devices directly. It is recommended that a small capacitor be connected across such inductive loads to insure maximum life of the relay tips.

For certain applications, an extended phototube holder can be added to CR7505-K2 and -K112 relays. A combination plug, cable, and phototube holder is available.

A special cover, CR7500-F1 can be added to CR7505-K2 or -K112 to increase the sensitivity and to make the units directional.

Order by CR number and specify voltage and frequency.

Nomenclature	With Tubes Each	Volts	Cycles	DIMEN. OF PANEL ENCLOSING CASE, IN.			Apprx. Ship. Wt., Lb.

CR7505-K108	56.00	115	60/25	10¼	5¼	7⅞	9

Numerous special photoelectric devices are also available.

## G-E CR7500 Photoelectric Accessories

### For Type CR7505 Photoelectric Relays

#### Light Sources

CR7500-G1A

CR7500-A4

CR7500-B2

In some cases, the operating light source for use with a photoelectric relay may be an ordinary incandescent lamp. For many applications, and for those in which the light source must be at some considerable distance from the phototube, a light source of greater intensity is required.

G-E CR7500 light sources employ a low voltage, concentrated-filament lamp of the type commonly used in automobile headlights. A double contact lamp socket permits the use of a single or double-filament lamp, to which voltage is supplied by a separately mounted transformer.

**CR7500-A4.** This general-purpose light source is designed for indoor service to be used with the CR7505 photoelectric relays. The unit consists of a metal conduit box. A lens with an arrangement for focusing is mounted on the cover of the box.

**CR7500-G1A.** For general-purpose, indoor application. Of cast-aluminum construction with a snap-on steel cover. The unit is provided with an adjustable optical system, adjustment being made by removing the back cover and loosening one screw. By means of an adjustable bracket, the unit may be mounted in any position, but it is preferable that the mounting be such that the lamp is upright.

A CR7500-K2 infra-red filter cap may be fitted to the end of the lens barrel so that an invisible beam can be produced where a visible beam would be objectionable.

**CR7500-G3A.** This light source for indoor service is similar to CR7500-G1A except that an additional lens is added to provide a short-focus concentrated beam of light. This unit will concentrate an intense spot of light approximately 1/4-inch in diameter at a distance of 2 inches from the lens. The appearance and dimensions are the same as CR7500-G1A.

**CR7500-B2.** Light source consists of a cast iron enclosing case with rubber gaskets, in which is mounted a No. 9TM321-A1 transformer. For outdoor service—weatherproof. The cover mounts a lens and arrangement for focusing and a double-contact lamp socket.

Order light sources by CR number. Specify voltage and frequency for transformer to be used with indoor light source; specify voltage and frequency for CR7500-B2.

*CR7500-B2	38.00	8 3/4	6 5/8	4 7/8	12

\*Price and number include a 60-cycle transformer. A 25-cycle transformer cannot be mounted in the outdoor type of light source because the physical dimensions of the transformer are too great. Separate outdoor 25-cycle transformer can be furnished at \$28.00 and the 60-cycle transformer can be omitted at \$7.00.

#### Indoor Light-Source Transformers

This transformer may be used to supply low voltage a.c. to one 21 or 32-candlepower lamp in any one of the indoor light sources. It is rated 110/220 volts primary with a secondary voltage to provide approximately 1000 hours' life from either a 21 or 32-candlepower, 6-8-volt automobile lamp. A tap is also provided on the secondary to give approximately 3000 hours' life from either a 21 or 32-candlepower, 6-8-volt lamp (with reduced illumination).

#### Accessories

CR7500-H1  
Phototube HolderCR7500-K2  
Infra-Red Filter  
CapSpecial Lens  
and Mask

**CR7500-F1 Special Cover.** This cover is provided with a light-collecting lens 3 inches in diameter, and a small aperture between the lens and the phototube. The light tunnel projects 3 inches from the front of the cover. The addition of this cover makes either CR7505-K2 or CR7505-K112 sensitive to an illumination of 1 foot-candle at the lens, and minimizes the effect of extraneous light.

**CR7500-H1 Phototube Holder, Cable and Plug.** If it is necessary to locate the phototube at some distance from CR7505-K2 or -K112 relays, this holder may be used. The dimensions of this unit are the same as those of the CR7500-G1A light source.

**CR7500-K2 Infra-Red Filter Cap.** This unit is a small cap which fits over the end of the lens barrel of the CR7500-G1A or -B2 light source to provide a practically invisible beam. The cap contains a filter glass which absorbs practically all of the visible energy radiated by the lamp, but permits the infra-red energy to pass. The photoelectric relays are sensitive to this infra-red energy.

**Special Lens and Mask.** This lens and mask is an accessory for use with the CR7500-H1 phototube holder (the type of phototube holder used with the CR7505-A100 and -N100) to minimize the effect of extraneous light and to make the unit directional. It consists of a lens barrel, a lens, and a mask or diaphragm located at the focal point of the lens. A small hole in the center of the mask permits light which enters approximately perpendicular to the plane of the lens to reach the phototube. For some special applications, the shape of the hole in the mask may be changed to permit the phototube to "see" only a definite area. The lens barrel fits into the phototube holder in place of the light tunnel normally employed.

## G-E Metal-Clad Switchgear Equipment

For General Power Service

With Magne-Blast Power Circuit Breakers

15000 Volts Maximum—500 Mva. Maximum—3-Phase, 3-Wire, 60 Cycles

Typical Light-Duty Metal-Clad Switchgear

Designed to provide the advantages obtainable in complete factory-assembled, metal-enclosed, safety-type switching equipments. Now available in standardized unit construction, for practically all varieties of general power applications and service, where the interrupting rating requirements for the power circuit breakers do not exceed 50000 kilovolt-amperes and the service voltage class is not in excess of 13200(Y) volts.

## Application

Applicable for general power service in central-station main and auxiliary circuits, steel mills, and other industrial plants, distribution substations, office buildings, hotels, theatres, department stores, hospitals, educational and public buildings, and other similar installations, to provide reliable control for generators, transformers, incoming power and tie lines, feeder circuits, bus-tie and bus-sectioning circuits, and synchronous and induction motors.

In the general design of this standardized switchgear, the anticipated requirements for the comprehensive field of its application have been carefully and fully studied, and all the advantages and outstanding constructive features, to provide properly for such application, have been adequately embodied in the factory-built unit construction.

It should be recognized that in the preparation of a listing of such standard equipment, as is contained in this catalog, it is necessary to generalize much of the information included. The purpose of such listings is to provide a quick simple method for estimating over-all costs, and space requirements, of entire projects, where rough total prices are required for appropriation purposes, etc. With such perspective in view, it will be realized that, for some specific jobs, actual final net quoted selling prices will frequently total materially less than the total estimating prices computed from the approximate price schedules and the actual over-all dimensions may differ from those listed.

**Service-Voltage Classes:** Standard equipment ratings are listed in accordance with system voltage classes as established by A.S.A. Standards, viz., 2400, 4160, 4800, 7200, 12000(Y), and 13200(Y) volts. The listed equipments are applicable within the nominal voltage ranges of each of these voltage classifications.

**Caution:** Systems having nominal service voltages of 4600 or 4800 volts, usually involve regulation conditions where actual voltages exceed these values for protracted intervals. Accordingly, for systems with these nominal service voltages, equipments listed for the 7200-service-voltage class should be selected and priced in every case.

Typical Installation with Magne-Blast Power Circuit Breakers, for General Power Service in a Large Industrial Plant

**System Neutral Grounding:** For installations where any of the listed equipments are applied on systems where the service-voltage class exceeds 4160 volts, it is desirable that the system neutral be grounded through a low value of impedance.

This provision is an important item in protection against overvoltage. The equipments which are listed for the 12000(Y) and 13200(Y) service-voltage classes are applicable only where the system neutral is grounded through a low value of impedance and adequate surge of overvoltage protective equipment also is installed.

**Frequency:** Although listed for 60 cycles, equipments can be furnished for operation at any other established commercial frequency. For applications at frequencies of 25 to 50 cycles, the listed estimating prices will apply.

## Construction

Sturdy construction will give service for many years, with minimum maintenance attention and expense.

Because the equipments herein listed are standard factory-built metal-clad units, any deviation from the standard listings of either the basic gear, or optional items, either by substitution, or otherwise, may necessitate an increase in price.

Designed for the adequate protection of machines and circuits, for safe and convenient operation, and for accessibility to component parts. Each complete switchgear equipment has a streamline appearance, which results from the use of the G-E standard line of semi-flush instruments, meters, relays, and other devices which are regularly and symmetrically mounted on the front and rear, smooth-steel enclosing panels.

Planned with reference to other similar units with which they may be required to line up, and the unit-type factory-assembled construction makes it easy to add extensions to an existing installation of an equipment composed of such units, without disturbing the harmonious appearance of the initial and complete installation, thus insuring maximum flexibility and adaptability.

Completely assembled at the factory, and shipped assembled, where feasible, or in the largest permissible number of units as a group, as determined by existing transportation and handling facilities.

Each standard metal-clad unit combines circuit breaker, disconnecting devices, interlocks, buses, connections, instruments, meters, control devices, instrument transformers, supporting frame, and enclosing structure in a single, factory-assembled unit per circuit controlled. All component parts are of G-E design and manufacture, of the type best suited to their function, and properly co-ordinated. Liberal factors of safety, both electrical and mechanical, to withstand severe service, are included.

## G-E Metal-Clad Switchgear Equipment

**Construction**

**Each group of associated primary devices**, such as the current transformers, the potential transformers, the buses and connections, is enclosed, where practical, in a separate grounded metal compartment. All circuits are exceptionally well-insulated.

**Potential-transformer compartments** are built in the well-known drawout construction, wherein the potential transformers and their primary fuses are mounted on a movable carriage. Access to the primary fuses is obtained only after the withdrawal of the carriage from the compartment, thus automatically disconnecting and isolating both the fuses and the potential transformers, and grounding them, to permit fuse replacement under safe conditions.

**Power circuit breaker** is effectively isolated from all other primary equipment, and so arranged that it may be completely disconnected from the bus and line, by lowering it from the connected position, (for operation-test purpose), and it may be entirely removed from the unit structure, for inspection, etc. Proper interlocks insure the proper sequence of operation, so that the breaker is always removed under safe conditions. Inspection of the breaker can usually be performed with perfect safety, because such routine service is ordinarily accomplished external to the unit stationary structure. Continuity of service of any circuit is obtained, during the inspection period, by the substitution of a spare breaker in place of the removed one. All units of equal rating and with like features are interchangeable.

All equipments are designed to withstand the insulation tests, and will operate within the temperature-rise limits, as prescribed by the N.E.M.A. and A.I.E.E. standards for enclosed switchgear.

The details of construction of the listed standard metal-clad switchgear units, and equipments, are fully and adequately illustrated and described in available G-E descriptive bulletins.

**Installation**

Prior to the physical installation of a standard metal-clad switchgear equipment, the floor can be prepared, conduits installed, and cables drawn, from previously prepared construction drawings, before the equipment is shipped from the factory. Then, only the power and control cable connections need to be made, and the removable elements (which are shipped separately) inserted in the stationary structures, in order to place the equipment into service. The incoming or outgoing cables can be brought in from above or below, according to the convenience of the installation. The cables are easily secured in the unit potheads, when ready to connect into service.

There is no chance for incorrect reassembly after shipment, nor is there involved any hunting for loose parts. This is an inherent asset and convenience when purchasing completely assembled equipment entirely built by a single manufacturer. Thus, is eliminated any divided responsibility of different manufacturers who contribute individual items for the erection of an assembled equipment.

High salvage value is obtained, because of the standard-unit type of construction and the sturdiness of the equipment. This makes it easy to move the equipment, either as a group or as an individual unit, simply by disconnecting cables, unbolting from foundations, etc., and lifting.

**General Information****Selection of Units**

All base units are listed according to the rating of the included oil circuit breaker. It is possible to choose a group of units, for an installation, having different breaker interrupting ratings. This is not objectionable, provided that the lower-rated breakers are adequate for the required interrupting duty.

It is general practice, however, and usually recommended, to include units of identical interrupting and current ratings, for purposes of economy, consistency in operation, and complete interchangeability of all removable elements.

**Protection of Machines and Circuits**

Provision is included throughout for automatically interrupting transformer, incoming-line, feeder, and motor circuits when the current exceeds a predetermined value over a predetermined period of time. This effectively protects generators against abnormal overcurrents from sources most likely to cause trouble and, beyond this, no automatic protection is provided in the basic equipment for generators. Differential relays for protection against internal generator trouble, however, are available as optional items. No automatic protection is furnished for exciters or generator field circuits.

Installations where the base units are to control both sides of power-transformer banks, optional items on differential protection equipment are offered.

Where parallel lines are involved and selective relaying arrangements are required, the problem should be submitted to your Distributor. For synchronous-motor units, automatic field-application and field-accelerating equipment are included.

**Heating**

At rated amperes, the temperature rise of the listed metal-clad units will not exceed the temperature requirements of the N.E.M.A. standards for metal-clad switchgear.

**Information Required With Order**

Give the complete ratings of all generators, transformers, feeder circuits, and motors to be controlled by the metal-clad switchgear.

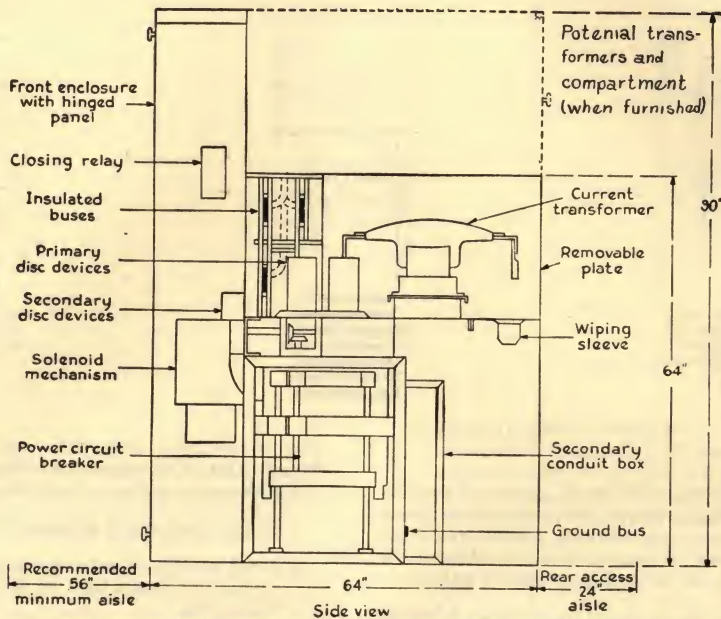

To assure promptness and efficiency in the execution of an order for this class of equipment, it is suggested that G-E Switchgear Information Form 13212 be filled in and accompany the order. If this form is not available, it is requested that the following information be furnished at the time the order is placed:

1. State, giving dimensions in feet, the maximum size of package that can be conveniently handled.
2. Give size, type, and direction of main leads, and direction of secondary leads.
3. Where the equipment is to line up with purchaser's present equipment, give complete information on the installed equipment.
4. Give name of person, or persons, to whom drawings and instruction books should be sent.
5. When equipment is to control machines already installed, the following information concerning the installed apparatus should be given:
  - (a) Name of manufacturer and complete ratings.
  - (b) Type of governor motor and rating (if used).
  - (c) Type of field rheostat (how operated, etc.).
  - (d) Field data.
6. Give location of the equipment, with reference to walls and available headroom.
7. Give the desired order of units from left to right, with accompanying sketch.
8. Give polarity of transformer banks (additive or subtractive) and connection sketch.
9. Furnish a one-line diagram of connections of all apparatus and feeder circuits.
10. Is system grounded? Where? If through a resistor, how much resistance?
11. If temperature meter is to be included, give length and size of meter leads.
12. Nameplates—give complete wording for any special marking or engraving.

## G-E Metal-Clad Switchgear Equipment

For General Power Service

Construction and Dimensions of Light-Duty Metal-Clad Switchgear Unit—Width, All Units, 20 Inches (Except Bus-Section Unit, 30 Inches).

G-E Metal-Clad Switchgear Equipment

For General Power Service

Schematic Connections Combined A.C. Generator and D.C. Exciter Equipments

Schematic Connections Single-Circuit Feeder, Incoming-line, Transformer Equipments

Schematic Connections Bus-Section Equipments

Includes (all equipments):

- 1 Metal-clad unit, complete with stationary and removable elements, including mechanical interlocks, primary and secondary disconnecting devices, automatic shutters, and front and rear enclosures (rear enclosures for master equipments) with hinged instrument panels.
- 1 Power circuit breaker, 3p-st, complete with d-c solenoid operating mechanism, trip coil, auxiliary switches, closing relay, control switch and indicating lamps, and breaker elevating mechanism.
- 1 Complement of instruments and meters as indicated, in full lines, in "schematic connections."
- 1 Complement of current and potential transformers as indicated, in full lines, in "schematic connections."
- 1 Set of insulated 3-phase buses, with supports, insulated copper interconnections, necessary cable-terminal connectors, terminal blocks, small wiring, and ground bus.

In addition, Generator and Exciter Equipments:

- 1 Generator voltage regulator, complete with accessories.
- 1 Relay, 3-element generator differential protective.
- 1 Field switch (discharge resistor not included) and provision for operation of field rheostats (rheostats not included).
- 1 Auxiliary compartment for secondary control.
- 1 Auxiliary compartment, separately mounted (for master equipment only).
- 1 Set of surge capacitors, to be mounted at the generator terminals by the purchaser.

Potential transformers are not included in feeder, incoming-line, or transformer equipments. For installations where bus-connected potential transformers are included, and wattmeters, watthourmeters, or voltmeter with transfer switch is added, two transformers and a compartment should be ordered.

## G-E Metal-Clad Switchgear Equipment

## Synchronous-Motor or Condenser Equipments

**Schematic Connections  
Full-Voltage  
Start**

**Schematic Connections  
Neutral-Reactor  
Start**

**Schematic Connections  
Line-Reactor  
(Parallel) Start**

Included (all equipments):

- 1 Metal-clad unit, complete with stationary and removable elements, including mechanical interlocks, primary and secondary disconnecting devices, automatic shutters, and front and rear enclosures (rear enclosures for master equipments) with hinged instrument panels.
- 1 Power circuit breaker (main or running), 3p-st. Complete with d.c. solenoid operating mechanism, trip coil, auxiliary switches, closing relay, control switch and indicating lamps, and breaker elevating mechanism.
- 1 Complement of instruments as indicated, in full lines, in the schematic connections.
- 1 Complement of current transformers as indicated in the schematic connections.
- 1 Set of protective relays (thermal, 2-element, No. 49; 3 short-circuit selective, No. 50; under voltage, No. 27; for motors less than 1500 hp, or for motors rated 1500 hp. and above relay equipment includes one 3-phase current-balance relay, No. 46; one 3-phase undervoltage and phase sequence relay, No. 47; thermal relay, No. 49; 1 over-current relay, No. 51; and one 3-phase differential protective relay, No. 87).

- 1 Field-application equipment (to be mounted separately in vicinity of motor) including metal-enclosed auxiliary compartment with enclosed panel and a hinged instrument panel (Note: for light-duty equipments the field application equipment is mounted in the main compartment)—includes field contactor and discharge resistor, synchronous speed relay, No. 13; field relay, No. 40; incomplete sequence relay, No. 48 (where required); and exciter relay, No. 53 (where required).

For other than full-voltage start, necessary starting breakers, breaker compartment, metal-clad units, etc., are included.

Insulated buses, interconnections, bar supports, ground bus, small wiring, etc. included.

All equipments are complete automatic-start.

Not included: Potential transformers and compartment. If meters or equipments are added requiring potential source and if no bus-connected potential transformers are included for the installation, two potential transformers and compartment should be added.

Starting reactors or autotransformers not included.

## G-E Metal-Clad Switchgear Equipment

For General Power Service

**Auxiliary Compartment**  
(Height and Depth Same as  
Base Unit Adjacent)

**Bus-Entrance Compartment**

**Superstructure-Type Potential-Transformer Compartment.** (Width  
is Same as That of Unit Located Beneath Compartment.)

### Compartments

Either an auxiliary, or a superstructure-type, potential-transformer compartment, should always be included and priced for the mounting of any potential transformers which are selected for addition to the listed basic metal-clad equipments.

#### Auxiliary Compartment

Auxiliary compartments, structure high, for location at any position in the main, or subsidiary, metal-clad gear line-up, or for mounting independently, are available for many practical applications, such as (1) An incoming-line, or feeder-tie compartment for housing group-operated disconnecting switches, buses, connections, and pothead; (2) As a potential-transformer compartment for housing up to a maximum of two sets of 2, or 3, potential transformers with their primary cutouts, and connections (drawout construction); and (3) As an instrument-and-metering compartment for housing one set each of current and potential transformers, and accommodating integrating and recording meters. These compartments also can be readily applied for the housing of power-station operating accessories, such as tripping batteries, control power transformers, etc.

The compartment is always furnished either with hinged front and rear enclosures, or with a hinged front enclosure only (identical to the enclosure furnished for the basic metal-clad units selected for the line-up), and required insulated buses and connections.

#### Bus-Entrance Compartment

A bus-entrance compartment is required for all installed metal-clad units, where no provision has been included for an incoming line (such as a metal-clad unit or an auxiliary compartment), in order to provide a suitable means of joining the incoming power cables to the bus.

The compartment is always located at the end of the metal-clad line-up, and includes bus extension, potheads, and connections. The incoming power cables may be connected to enter the compartment either from above or below.

#### Potential-Transformer Compartment

(Superstructure Type)

All potential transformers require a separate enclosing compartment. The structure-high auxiliary compartment is the

preferred recommendation for enclosing the potential transformers. However, because crossovers primary of connections for such transformers are strictly forbidden in a metal-clad switchgear line-up, and all potential transformers must be located immediately adjacent to the circuit with which they are associated, installation requirements may dictate the use of the superstructure type of potential-transformer compartment. For such cases, the compartment is located immediately above the basic primary-gear unit of the circuit with which the transformers are associated. Drawout construction for the transformers and their primary fuses, with automatic grounding facility, is included. The compartment is sufficiently large to accommodate one set of 2 or 3 transformers, with their primary fuses, plus primary and secondary insulated connections.

Description	Master Equipment		Light-Duty Equipment

125	3900	1530.00	800	3055.00	1600

†Consists of 3—sp-st. switches, group-operated by a manually operated mechanism, and one mechanical interlock.

†Consists of 3—sp-dt. switches, group-operated by a manually operated mechanism, and two mechanical interlocks.

## G-E Metal-Clad Switchgear Equipment

## Necessary Additional Accessories

## Potential Transformers

While the price of each metal-clad unit listed includes the potential transformers essential to the proper operation of the standard listed equipment, the selection of certain of the Optional items may make additional potential transformers necessary. Those thus needed should be determined from the following rules, referring to Fig. 1.

**Generator Units.** Two potential transformers (A) are included. Those provide potential for voltmeter readings, synchronizing, and excitation for the indicating wattmeter, and also for a watthour meter, should one be added. Accordingly, additional transformers are usually not required for generator units.

However, should a voltage regulator be used (this is not listed), an additional potential transformer (B) would be required.

**Incoming-Line Units.** If synchronizing is to be done, one potential transformer (C) will be required. If 3-phase voltmeter readings are desired, or if wattmeters or watthour meters are added, or all three, plus synchronizing, a total of two potential transformers will be required at (C). Exception: Where the installation includes two bus potential transformers (D), the wattmeter or watthour meter may be excited from them, in which case only the one synchronizing transformer would be needed at (C).

**Power-Transformer Units.** If watthour meter is added to a base unit, two potential transformers are required at (E), unless station transformers (D) are provided.

**Bus Potential Transformers.** To minimize the number of potential transformers which would otherwise be required, it is practical to include in an installation one set of transformers (D) connected to the station bus and from which all the potential coils of meters, etc., are excited through a potential bus.

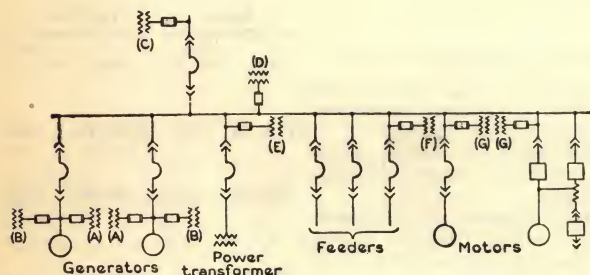

Figure 1

**Feeder Units.** Where meter is added to a feeder base unit, two potential transformers (F) are required, except where bus potential transformers (D) are provided.

**Motor Units.** The base units all include one potential transformer (G) for manually operated breakers, or one control power transformer at (G) for electrically operated breakers. If a watthour meter is to be added, an additional potential transformer is required at (G) for manually operated breaker units, or two potential transformers at (G) for electrically operated breaker units. The use of the control power transformer for meter excitation is *not recommended*. Where bus potential transformers (D) are provided, the potential transformers (G), with their compartments, may be omitted, an optional item is listed to cover this.

\*Potential Transformers for 60-Cycle Service  
(Including Current-limiting Primary Fuses)

Maximum Circuit Volts	Each	Ship. Wt., Lb.
2400	\$130.00	70
4800	195.00	125
13800	260.00	180

\*Not included: Enclosing compartment. Add, if required, per schedules listed.

## Instrument Brackets

These instrument brackets are of the swinging type, with perforated rear enclosure. As a rule, they are located at the right end of the metal-clad line-up.

**No Potential Transformers Included.** In all cases where proper potential transformers have not been provided in either the listed base unit or by added "option," it is necessary to add the proper number of potential transformers, plus a compartment, for operating in conjunction with the instruments included on the brackets.

## For Installations Having Two or More Generators, or Incoming Lines, with Which Generators Must be Synchronized

One synchroscope, 2  
voltmeters.  
Weight, 120 pounds.  
Each..... \$360.00

One synchroscope, 2  
voltmeters, 1 frequency  
meter. Weight, 170 pounds.  
Each..... \$585.00

For Use Where Synchronizing Is Not Required and Where  
No Voltmeter Is Present On Panel

One voltmeter.  
Weight, 60 pounds.  
Each..... \$170.00

One voltmeter, 1 fre-  
quency meter.  
Weight, 110 pounds.  
Each..... \$290.00

## Ground-and-Test Devices

A portable ground-and-test device can be furnished, to provide facilities for readily grounding either the bus side, or the outgoing-cable side, of a master metal-clad unit, or for the phasing out of operating circuits.

This device includes three through studs which are shaped similar to the bushings of the removable power circuit breakers furnished in the metal-clad switchgear units, so that they can be readily fitted into the stationary disconnecting devices of such a unit. The three studs are adjustable, as a unit, on the device, so that their position may be varied for insertion in either the bus side, or the cable side of the stationary devices of the metal-clad stationary structure.

## G-E Metal-Clad Switchgear Equipment

## Necessary Additional Accessories

## Ground-and-Test Devices

The lower ends of the studs are formed as terminals, to permit the ready attachment of grounding or testing-equipment cables (which are furnished by the purchaser).

The framework of the device is mounted on wheels, so that it is readily portable to a proper position in the stationary structure of the metal-clad unit, whence it can be raised, lowered, or withdrawn in the same manner as the removable element of that unit.

The use of this ground-and-test device is recommended for installations where operating requirements stipulate that circuits shall be entirely disconnected from all sources of potential, and the circuit dead-grounded when work of any kind is to be performed on the circuit. Also, it is recommended as an adjunct to cable-testing equipments, as a means of ready contact with the circuit cables and conductors, either for the regular standard high-voltage testing procedure, or for the proper phasing out of the circuit connections.

Maximum Service-Voltage Class	Each	Ship. Wt., Lb.
4160	\$520.00	250
13200(Y)	620.00	300

## Necessary Station Accessories

One set of necessary station accessories is recommended for each complete metal-clad installation, to provide proper facilities for (a) removing a removable element from the stationary structure, (b) inserting the spare removable element in the stationary structure while the original is being transported to another locality, and (c) for convenience in breaker test and inspection.

These accessories consist of two transfer trucks and a testing cabinet.

One of the trucks is used to transport the spare removable element to a unit while, at the same time, the other truck is used for removing the element from that unit. This facilitates and reduces the time required to perform the removal-replacement operation, thus reducing outage to a minimum.

Description	MASTER EQUIPMENT		LIGHT DUTY EQUIPMENT	
	Each	Wt., Lb.	Each	Wt., Lb.
1—Set of Metal-Clad Gear Accessories.....	\$430.00	700	\$215.00	575

## Optional Additions or Modifications

Description	Each	Ship Wt., Lb.
For Any Generator Equipment		
*Add 1—Complete Ground-Detector Equipment:		
For 2400-Volt Service-Voltage Class.....	\$1010.00	1050
For 4160 and 4800 Service-Voltage Classes.....	1170.00	1200
For Service-Voltage Classes 7200 to 13200(Y).....	1530.00	1475
For Power-Transformer Service:		
†Add 1—Differential-Relay Protective Equipment.....	620.00	100
§Current-Transformer Surcharge, Where Required.....	290.00	300
For Any Incoming-Line Equipment:		
†Add 1—Indicating Voltmeter with Suitable Scale, and a Voltmeter Transfer Switch.....	130.00	15
†Add 1—Indicating Wattmeter, or Varmeter, with Suitable Scale.....	165.00	25
†Add 1—Synchronizing Switch.....	50.00	5
For Motor Equipments:		
†Add 1—Integrating Watthour Meter.....	195.00	50
For Any Installation or Equipment:		
†Add 1—Set of Bus Differential Relays.....	545.00	100
Current-Transformer Surcharge for Each Circuit Affected.....	295.00	300
†Add 1—Graphic Watthour Demand Meter, 3-Phase, Single-Circuit.....	455.00	100
Surcharge for Each Circuit Affected.....	295.00	300
†Add 1—Graphic Voltmeter.....	310.00	50
Add 1—Graphic Ammeter.....	310.00	50
†Add 1—Reactive Kilovolt-Ampere-Hour Meter, and Separate Demand-Meter Combination.....	650.00	300
Surcharge for Each Circuit Affected.....	295.00	300
For Any Light-Duty Equipment:		
Add 1—Portable Electric Drill, with Adapter, to Operate Elevating Mechanism.....	215.00	30

\*Includes triplex voltmeter, three potential transformers, and compartment. Only one ground-detector equipment is required for a complete installation.

†Not included: Any current-transformer provision.

‡Not included: Potential transformers. Where not otherwise provided in the installation, proper potential transformers and compartment must be added, and priced in accordance with the schedules listed elsewhere.

||Includes provision for necessary current transformers.

§Includes current transformers for location on one side of the transformer bank, in case they are not already provided in a switching unit for that side of the bank. The transformers will be mounted, either in the switching unit selected for that side of the transformer bank, or by the purchaser, in the proper location.

## G-E Standard Metal-Enclosed Low-Voltage A. C. Switchboards

## With Drawout Air Circuit Breakers

600 Volts Maximum—3-Phase, 3-Wire, 60 Cycles

Interrupting Ratings—15000 to 100000 Amperes

Installation View of a Metal-Enclosed, Low-Voltage, Drawout Air-Circuit-Breaker Switchboard, Including a Generator Unit and a Number of Feeder-Section Units (Electrically Operated Generator-Field Rheostat Mounted External to the Switchboard)

General Electric has available a complete line of metal-enclosed drawout air-circuit-breaker switchboards rated 250 volts [d.c.] 600 volts [a.c.] in current ratings up to 4000 amperes.

Each breaker is mounted on a carriage that is as easily drawn out as a file-cabinet drawer, and the breaker is easily removable from the carriage, for adjustment or repair. The breaker is equipped with self-coupling disconnecting devices, so that when the carriage is drawn forward the breaker is completely disconnected from all main connections. Mechanical interlocks prevent the withdrawal, or the inserting, of a breaker carriage, unless the breaker is open.

The dead-front drawout air-circuit-breaker switchboard provides the same type of high-quality safe service for the low-voltage plant as metal-clad switchgear provides for 2500 to 15000-volt plants. The following list includes some of the advantageous features of the dead-front drawout switchboard:

**Completely Metal-Enclosed Equipment;** assures safety to personnel by preventing accidental contact with live parts.

**Removable Breaker Units;** facilitate inspection and maintenance.

**Interchangeable Breaker Units;** provide maximum availability of power.

**Mechanical Interlocks;** prevent improper sequence of operation.

**Factory-Built, and Shipped Assembled;** assures the receipt of equipment that is ready to operate, with low and predictable installation costs.

These equipments incorporate the latest improved features to provide inexpensively for the simple, safe, and reliable control of 600-volt (or less) a.c. generators, power transformers, incoming and outgoing feeder lines, and synchronous and induction motors (full-voltage-started), which may be used for general power and lighting service in power plants, municipal and industrial installations, and such commercial structures as

office buildings, banks, hotels, theaters, department stores, hospitals, and educational and public buildings, where the total generating capacity connected to the station bus will not exceed the maximum limits listed in Table 1.

Table 1

Maximum Permissible System Generator Capacity Connected to Station Bus as Determined by Feeder-Breaker Interrupting Ratings

In the general design of this class of gear, the anticipated requirements, for the comprehensive field of their application, have been carefully and fully studied, and all the advantages and outstanding constructive features to provide properly for such application have been fully incorporated in these standard equipments.

The equipments throughout are of the highest quality manufactured, and may be relied upon to give efficient and satisfactory service for many years, with minimum maintenance attention and expense.

Because these units constitute standard switching equipments, any deviations from the standard listings of either the units, or the optional items, either by substitution or otherwise, may necessitate an increase in price.

**Frequency.** Although listed for 60 cycles, the panels and equipment can be furnished for operation at any other established commercial frequency.

## G-E Standard Metal-Enclosed Low-Voltage A.C. Switchboards

With Drawout Air Circuit Breakers

Metal-Enclosed Drawout Air-Circuit-Breaker, Feeder Switchboard;  
Bus Transition Unit Located at Approximate Center

Figure 1

## Other Applications

Similar standard metal-enclosed switchboard equipments for the control of direct-current apparatus and circuits can be furnished. Prices and data will be submitted upon request.

## Cascading of Breakers

1. In general, air-circuit-breaker interrupting ratings should equal or exceed the fault currents obtainable at the locations where the breakers are to be installed. For relatively large installations, however, where a number of feeder circuits are fed from one or more power sources, it may be economically justifiable to install air circuit breakers in cascade, which means that only the breakers nearest to the source of power need to have interrupting ratings equal to, or in excess of, the obtainable fault current; while breakers farther from the source may have successively lower ratings.

2. When a single air circuit breaker is located between the power source and the load, its interrupting rating must be equal to, or greater than, the average total calculated rms current (including the d.c. component) at 0.5 cycle from the inception of the circuit.

3. Where there are two or three breakers located between the power source and the load, with no appreciable reactance between breakers and buses, cascaded or backed-up breakers may be applied beyond their published interrupting ratings, as follows:

Figure 2

(a) The breaker which is connected directly to the power source must have the same interrupting rating as for a single-breaker installation, per paragraph 2, above.

(b) The second breaker in the cascade may be applied, up to 200 per cent of its published interrupting rating, if based on the currents calculated for the first breaker, per (a).

(c) The third breaker in the cascade may be applied up to 300 per cent of its interrupting rating, if based on currents calculated for the first breaker, per (a). Further cascading cannot be done.

4. The principle of cascading is based upon the fact that breakers of lower interrupting ratings are backed up by breakers of higher interrupting ratings. In order to obtain this backing up properly in cases of severe fault, it is essential that the main breaker trip instantaneously, and at approximately the same time as the smaller breaker.

5. In Table II, are listed fault currents for various power-transformer installations, together with the motor short-circuit-current contributions, and also the combinations of breakers which may be used in cascade for such installations.

The values of short-circuit current listed are based on certain assumed conditions, as stated in the notes under the tables, and, on the interrupting-rating requirements for the transformer-primary power circuit breaker. Also, values are listed for the case where the maximum short-circuit kilovolt-ampere available from the primary system is unlimited.

\*All selections are based on voltages, transformer impedances, and motor loads, as indicated. For conditions differing from those given the selections therein do not apply. Under different conditions, the short-circuit currents should be calculated, and selections made accordingly.

†The motor short-circuit contributions are computed on the following bases:

(a) That not more than 25 per cent of the motor load is synchronous. If more than 25 per cent is synchronous, for the selection of breakers B and C, in cascade, engineering recommendations should be obtained.

(b) That the combined impedance of motor and motor leads be such as to give five times motor normal current.

‡Breaker A' selections are in all cases governed by the necessary continuous-current ratings of the transformer,

and this is the reason that in some cases the interrupting ratings are higher than the ratings given for the corresponding A breaker. Interrupting ratings of A breakers are all based on the interrupting requirements only, as determined by the combined short-circuit total amperes.

§The current values in this column are those for the given kva. ratings of the transformers. Transformers frequently have permissible loadings above their ratings.

||Where the interrupting ratings given for B and C breakers are lower than the combined short-circuit total rms amperes, the selections are based on cascading. Where cascading is done, the back-up breakers should be equipped with tripping devices which will provide instantaneous tripping before the current through the backed-up breakers exceeds 80 per cent of their interrupting rating.

¶Use next-larger rating for voltages less than 240 or 480.

## G-E Standard Metal-Enclosed Low-Voltage A.C. Switchboards

## With Drawout Air Circuit Breakers

## Arrangements

The sizes of the basic feeder-section units are determined by the types, ratings, and method of operation of the air circuit breakers which they house; and the height of a section fixes the maximum number of sections permissible for each vertical assembly. Thus is obtained maximum flexibility in the layout of a proposed switchboard, which permits any preferred location of individual feeder sections in the complete switchboard, and the location, at will, of the entrance of incoming power lines to the switchboard (such as at either

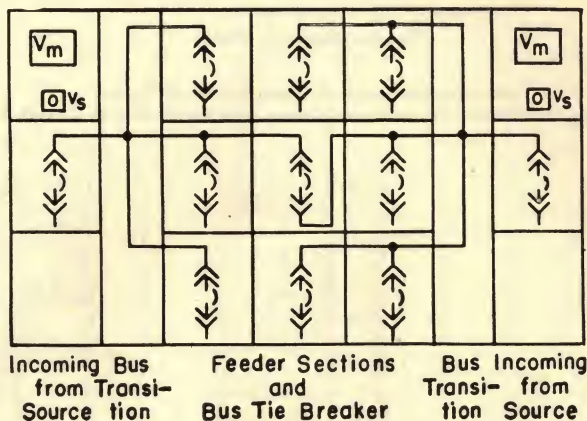

Figure 1  
Schematic Connections of a Typical Switchboard  
Assembly, Including a Bus Transition Compartment

end, or at both ends for two incoming lines, or at the center).

The approximate dimensions, number of sections permissible for a vertical assembly, specifications, and estimating prices, of each of the standard feeder-breaker sections, are listed.

To obtain the estimating price of a switchboard to be constructed entirely of the standard feeder-section units, it is necessary only to compute the total of the listed prices of each of the sections selected, plus the listed prices of any of the listed subsidiary items which may be required, or selected.

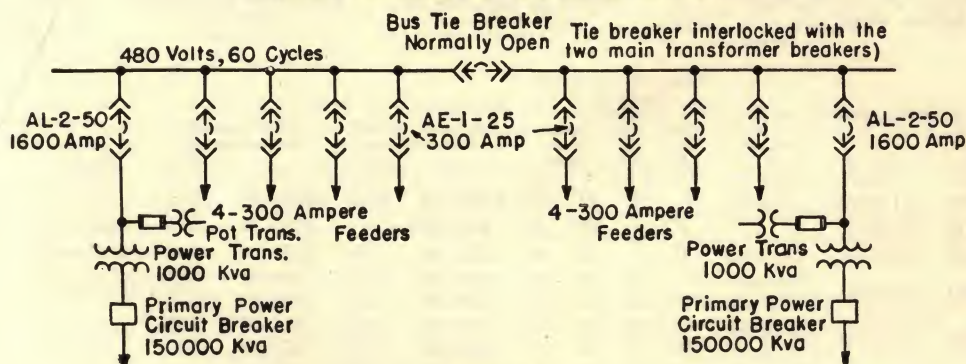

Figure 2  
Schematic One-Line Connection Diagram

## Bus Transition Units

Bus transition units, each of which consists of a metal-enclosed unit, with a front hinged panel, which encloses vertical bus (risers) and connections, are listed for application in switchboards comprised, in part, or in whole, of a number of standard feeder-section units, and where is involved a necessary transition of buses or connections from vertical to horizontal runs, or vice versa.

There are several applications where a bus transition unit is definitely recommended, such as when connection must be made between one large incoming power-line feeder-section unit in the switchboard to several rows of small feeder-section units, as illustrated schematically in Fig. 1.

The addition of one or more bus transition units for such a proposed switchboard *may not always be physically necessary*, but when computing estimating prices, they must be included in the price.

## Instructions for Ordering

Specify the voltage and frequency of the system. Specify the circuits to be controlled, giving the complete rating of each (including the continuous ampere and the circuit-

breaker interrupting rating required). Describe each subsidiary and optional item selected.

Give the desired order of the base units and auxiliary compartments from left to right, facing the switchboard.

When the air circuit breakers are to control circuits fed from power transformers, give the interrupting kilovolt-ampere rating of the primary power circuit breakers.

Give any additional pertinent information.

## Example for Ordering and Pricing

For the purpose of demonstrating the method to be followed to determine the total estimating price of a metal-enclosed drawout switchboard selected from this catalog, the following assumed case has been chosen, and the circuits clearly shown by means of the schematic one-line connection diagram, Fig. 2. It is recommended that this same procedure be followed when preparing such estimates, i.e., the preparation of a similar connection diagram, and pricing accordingly. In the following example, bus transition units are included where they may be considered as a probable requirement.

Description	Each	No. Required
Bus Transition Units, 1600 Amperes.....	\$310.00	2
Main Transformer Breaker Units.....	1495.00	2
Bus-Tie Breaker Unit, 1600 Amperes.....	1495.00	1
Feeder Breaker Units, 300 Amperes.....	650.00	8
Sections Less Breaker (\$650 less \$390).....	260.00	4
Voltmeters and Transfer Switches.....	115.00	2
Potential Transformers.....	60.00	4
Key Interlocks for Main and Bus-Tie Breakers.....	*40.00	3
Total Estimating Price.....	†11935.00	

\*Per set.

†Total estimating price is computed by multiplying the No. Required by price each.

\*Motor-feeder, and motor-branch circuit applications are limited to 600 amperes maximum continuous rating.

†Prices are approximate only.

‡Where the complete switchboard is comprised of a number of different unit types, the overall depth of the units is made identical, in order to obtain uniformity in construction and bus runs.

§Width of bus transition unit is as required for the installation minimum, 12 inches. Depth corresponds to that of adjacent feeder-section units.

General Specifications of Feeder-section Units—  
(Equipment included in Price)

For Optional Additions, See Table IV

- 1—Metal-enclosed unit, complete with stationary and removable elements, including primary disconnecting devices, mechanical interlocks, and
- 1—Louvered, hinged-front door.
- 1—Air circuit breaker, complete with overcurrent trips, interpole barriers, operating handles (or control switches for electrically operated breakers), and all necessary parts, on removable drawout carriage.
- 1—Bare 3-phase bus with supports.
- Necessary bare-copper interconnections.
- Cable terminal connectors.
- 1—Ground bus.

General Specifications of Bus-Transition Units  
(Equipment Included in Price)

- 1—Metal-enclosed unit, complete with hinged-front instrument panel, with latches, and
- 1—Bare 3-phase bus with supports.
- Necessary bare transition copper connections.
- Mounting and small wiring, including terminal boards, for secondary control equipment, where added. Mounting for current and potential transformers.

Prices include the following:

For all equipments:

Metal-enclosed unit, complete with stationary and removable elements, including primary and secondary disconnecting devices, mechanical interlocks, louvered hinged door for each breaker compartment.

Hinged-front instrument panel for enclosed secondary control compartments.

Auxiliary compartment, with hinged-front instrument panel.

Air circuit breaker (or breakers), complete with overcurrent trips, interpole barriers, operating handles (or control switches for electrically operated breakers), and all necessary parts, on removable drawout carriage.

Instruments, instrument transformers, instrument switches.

Copper buses, bus supports, copper interconnections, necessary cable-terminal connectors, terminal blocks, ground bus, small wiring. In addition, For generator-exciter equipments:

Mounting and operating mechanism for field rheostats (rheostats not included).

Field breaker (discharge resistor not included).

Provision for voltage regulator (regulator not included).

Differential-relay equipment, for generators rated 2000 amperes and above.

For synchronous-motor equipments:

Field contactor and discharge resistor:

Operating mechanism for field rheostat (rheostat not included).

Synchronous-speed relay, field relay, undervoltage device, thermal relay (for equipments in excess of 600 amperes).

Incomplete-sequence relay (for motors rated 500 hp. and above).

Not Included: Automatic field-removal and resynchronizing, for pull-out protection. (Loaded start.) Where desired, increase price \$195.

For induction motor equipments:

Undervoltage device.

Transfer relay (where required, Fig. 5).

Thermal relays (for circuits above 600 amperes).

\*Depth of unit is same as for feeder unit of corresponding-size breaker. Where the complete switchboard is comprised of a number of different unit types, the overall depth is made identical, in order to obtain uniformity in construction and bus runs. †Prices are approximate.

## G-E Standard Metal-Enclosed Low-Voltage A. C. Switchboards

### With Drawout Air Circuit Breakers

#### Auxiliary Compartments

For some installations, the application of some of the equipments listed in this section requires the addition of an auxiliary compartment for the purpose of providing proper facilities for the accommodation of additional devices, among which may be totalizing meters, power company's meters and instrument transformers, tripping battery and charger (when added), extra potential transformers, or any other pertinent additional devices.

The auxiliary compartments (listed in Table III) have the same depth dimensions as the equipment structures with which they are aligned in the switchboard structure. It is provided with a full-height hinged-front instrument panel with latches, and is usually located immediately adjacent to the equipment with which it is associated, although, for certain applications, it may be located at any desired position in the structure line-up.

Table III

#### \*Auxiliary Compartments

To Line Up with Unit Having Breaker of Interrupting Rating	††Estimating Price	Ship. Wt., Lb.
50000 Amperes or Less.....	\$615.00	900
75000 Amperes.....	810.00	1000
100000 Amperes.....	1120.00	1150

#### Application of Potential Transformers

The devices (listed in this section) which regularly require excitation from potential transformers, are as follows:

Voltmeter	Wattmeter
Synchroscope	Watt-hour Meter
	Frequency Indicator

It is not necessary to include a potential transformer for operation in conjunction with an undervoltage device for an air circuit breaker.

#### Instrument Brackets

Instrument brackets of the swinging type, with perforated rear enclosure, for location at either end of the switchboard, are available. For selection, description, and prices, refer to your Distributor.

Table IV—Optional Additions and Modifications\*\*

Description	Estimating Price, †Each	Ship. Wt., Lb.
1—Potential Transformer, With Primary Fuses.....	\$60.00	50
1—Current Transformer, for Unit Rated:

For Equipment With Manually Operated Breaker.....	1365.00	450
For Equipment With Electrically Operated Breaker.....	1330.00	425
†1—Set of Three Ground-Detector Lamps, With Push-Button Switch.....	80.00	10
1—Key Interlock (To Prevent Closure of Breaker Unless Interlock Is Set).....	50.00	2
1—Undervoltage Device, Time, for Air Circuit Breaker Rated:		
50,000 Amperes or Less Interrupting Capacity.....	45.00	10
75000 or 100000 Amperes Interrupting Capacity.....	80.00	15
1—Shunt-Trip Device, for Manually Operated Breaker Rated:		
50000 Amperes or Less Interrupting Capacity.....	30.00	10
75000 or 100000 Amperes Interrupting Capacity.....	65.00	15
1—Clock (10-Inch Dial), With Bracket, for Mounting On Top of Unit.....	260.00	40
1—Alarm Bell, Up to 12-Inch Diameter.....	65.00	20

\*Included: Necessary bus copper where the station bus extends across the compartment, and provision only for mounting instrument transformers.

†For hinged rear panel, add \$1 4. per compartment.

††For firm net prices, refer to your Distributor.

§This item should be priced only when either of the demand meters listed herein are added for a circuit.

||These items operate in conjunction with the circuit watthour meter.

¶Only 1 set required for a complete switchboard, regardless of the number of generator equipment installed.

\*\*All instruments, meters, and switches are to be mounted on the hinged instrument panel of either a bus transition unit, or an auxiliary compartment, which must be added, if not already included. It is also feasible to mount instruments, meter, instrument switches, etc., on the front doors of blank feeder-section units, to obtain an arrangement of circuit metering devices in vertical-panel assemblies. For estimating prices for such an arrangement, it is satisfactory to price a proper listed feeder-section unit, less its removable element, for mounting each such instrument-group location in the switchboard.

†††Not Included: Any instrument transformers, which should be added, as required for the circuit and the switchboard, per the prices listed in this table.

## G-E Types AE-1-15 and AE-1-25 Enclosed Air Circuit Breakers

For Dead-front Switchboard Mounting

Manually or Electrically Operated

Type AE-1-15 Air Circuit Breaker, Manually Operated, Enclosed Type

Type AE-1-15 Air Circuit Breaker, Manually Operated, For Dead-front Switchboard Mounting

Type AE-1-25 Air Circuit Breaker, Electrically Operated, Enclosed Type (With Cover Removed to Show Breaker)

Types AE-1-15 and AE-1-25 air circuit breakers are particularly adapted to general industrial and switchgear service where numerous opening and closing operations are required. They provide economical and reliable protection for power and lighting feeder circuits.

These breakers are capable of operating thousands of times without requiring maintenance and their simple, compact, and sturdy construction makes them especially suitable for mounting in steel enclosures.

The Type AE-1-15 with 15000-ampere interrupting rating and the Type AE-1-25 with 25000-ampere interrupting rating are similar, except that the Type AE-1-25 is generally heavier and sturdier than the Type AE-15.

Calibration range: 100-200 per cent of rating.

Voltage ratings: 600 volts a.c., 250 volts d.c.

The multipole breakers consist of single-pole elements grouped compactly together and operated simultaneously by a sturdy insulated steel shaft. Manually operated breakers have a pistol-grip handle—turn to close, pull to trip. Electrical operation is by means of a solenoid mounted at the side of the breaker within the same space occupied by the manual mechanism.

The arc quencher, one on each pole, is a most important factor in the dependable operation of these breakers. It minimizes disturbances and quickly extinguishes the arc. Metal pins above the contacts split up and cool the arc. The arc energy is rapidly absorbed by parts having high thermal capacity and large radiating surfaces.

These breakers are equipped with dual magnetic over-current tripping devices which differentiate between overloads and short circuits by providing a time delay inversely proportional to the over-current for values up to approximately ten times normal current, and instantaneous tripping for higher or short-circuit currents.

Prices include: time-delay, dual-magnetic, over-current tripping device per pole; arc quenchers; and ebony-asbestos base. Breakers in steel enclosures include, in addition, position indicator to show open or closed position of breaker. Manually operated breakers have pistol-grip handle on the enclosing case cover. Electrically operated breakers in enclosures include push-button closing switch and push-button mechanical trip.

When ordering, specify type, number of poles, number of current trips, voltage rating, a.c. or d.c. circuit, current rating, and whether for dead-front mounting or enclosed for individual mounting.

## G-E Type AL-2 Air Circuit Breakers

## Metal-Enclosed and Dead-Front Switchboard Mounting

For A.C. and D.C. Circuits

Manually and Electrically Operated

Type AL-2-50 Air Circuit Breaker, Manually Operated, for Dead-Front Switchboard Mounting

then extends through a slot in the cover and is completely insulated from all live parts. A positive indicator shows open or closed position of the breaker.

Type AL-2 air circuit breakers are recommended for use in all applications where heavy-duty breakers and high current ratings are required.

The unit frame construction of this breaker makes each pole a self-contained unit. These single-pole units are mechanically connected for simultaneous operation in multipole breakers. Individual toggle mechanisms put the contacts under strong pressure—yet the breaker is easily closed. Manual operation is not recommended for breakers larger than the AL-2-50, and when manually operated, this breaker is preferably mounted back of a dead-front panel, or within a metal enclosure. The handle

Electrical operation of the Type AL-2-50 is by means of a motor-operated cam mechanism, operating through an enclosed worm-gear reduction that provides positive action. Universal motors for a.c. or d.c. are employed.

The overcurrent tripping is direct-acting and, in no case, are current transformers or overcurrent relays required.

Price includes: time-delay, direct-acting overcurrent tripping device per pole; arc quenchers; and ebony-asbestos base. Electrically operated breaker price includes, in addition, shunt trip; closing control relay; and four-stage, rotary-type, auxiliary switch, all mounted on breaker permanent base and wired to a terminal block.

When ordering, specify type, number of poles, number of current trips, time or instantaneous, voltage rating (order barriers for multipole breakers above 250 volts a.c. or d.c.), a.c. or d.c. circuit, current rating, manually or electrically operated (if electrically operated, give voltage, a.c. or d.c., for control source), metal-enclosed or for dead-front mounting, and laminated stud slots for 2000 amperes and above:

## G-E Type AH-1 and Trumbull Type AT Air Circuit Breakers

Single, 2, and 3-Pole Air Circuit Breakers, Type AT, 50-Ampere Frame Size

Type AH-1 Air Circuit Breaker, 3-Pole 225-Ampere Frame Size

Type AH-1 Air Circuit Breaker, 3-Pole 600-Ampere Frame Size

Type AT air circuit breakers are recommended for use in panelboards and other load centers as a modern substitute for fuses and fused switches, in service entrances instead of fused switches, in dead-front switchboards, and also for individual circuits and appliances. The operation is automatic on either overload or short circuit. Power is restored by a slight movement of the handle.

Available in single, 2, and 3-pole in the 50-ampere frame size; 2 and 3-pole in all other sizes.

Breakers of the 50-ampere frame size are equipped with thermal overcurrent trip, while the larger sizes also have the thermal trip for moderate overcurrents, plus an in-

stantaneous magnetic trip for short circuits.

In the Trumbull Type AT breakers, the arc interruption takes place in an improved arcing chamber which removes the destructive action of the arc from the contacts and entirely isolates it from the mechanism. Contacts are of the low-resistance type manufactured from special nonwelding material.

In the G-E Type AH-1 breakers, the contacts are of the multiple-finger type, designed for long life, low maintenance, and easy accessibility for inspection. The contact tips are of silver-tungsten alloy, with high arc-resisting and nonwelding characteristics.

### \*600-Ampere Frame Size, 25,000 Amperes A.C., 20,000 Amperes D.C., Interrupting Rating

1225-400	G-E AH-1	.....	..	\$233.00	50	\$296.00	60	\$250.00	50	\$320.00	60	{ \$63.00 98.00 99.00 136.00 }	{ 3 1/4 5 5	\$4.15 4.75
1500-600		.....	..	269.00	50	243.00	60	286.00	50	367.00	60			

\*Interrupting ratings given are N.E.M.A. ratings. The Underwriters' test ratings are as follows, a.c. or d.c.: 50-ampere frame size AT, 5000 amperes; 100-ampere frame size ATA and ATB, 250-volt a.c., 125/250-volt d.c., 5000 amperes; 100-ampere frame, size ATA and ATB, 600-volt a.c., 250-volt d.c., and all AH-1, 10,000 amperes.

†Circuit breakers as listed are front-connected. For back connection, two studs are required per pole: that is; two for one-pole breaker, 4 for two-pole, and 6 for three-pole. Studs are furnished with necessary nuts and washers.

‡Trip units of the 50-ampere frame size AT and of the 100-ampere frame size ATB breakers are not interchangeable. Each of the interchangeable trip units of the 100-ampere frame size ATA and of the 225 and 600-ampere frame size AH-1 includes a thermal unit and an instantaneous magnetic-trip element for each pole, combined into a single sealed breaker unit. The magnetic trip is adjustable to trip at high or low currents, independent of the thermal element. Prices given are for two-pole and three-pole breakers respectively.

§Long and short stud for each pole. Specify ampere rating for ATB studs.

||When assembling studs to a 600-volt a.c., or 250-volt d.c., breaker, a short and a long stud should be assembled on adjacent poles, in order to maintain suitable clearance between poles. Equal quantities of both lengths should be ordered.

¶Ampere ratings: 70, 90, 100, 125, 150, 175, 200, 225, 250, 275, 300, 350, 400, 500, 600.

## G-E Types FK-142 and FK-143 Indoor Oil-Blast Power Circuit Breakers

## Manually and Electrically Operated

## 8-Cycle Interrupting Time

## Type FK-142

25000 KVA—5 KV—  
600 AmperesTriple-Pole, 600-Ampere,  
Manually Operated,  
Panel-mounted

Types FK-142 and FK-143 oil-blast breakers are recommended for use on a.c. circuits where sturdy, compact breakers with interrupting ratings up to 25000 and 50000 kilovolt-amperes are required. They are suitable for industrial service and in other installations where space is limited. They are of similar construction, the FK-143 being somewhat sturdier for heavier duty.

These breakers are available in double- and triple-pole, single-throw units with all poles in a single, rectangular, welded steel tank. They have oil-blast contacts, including silver-to-silver main contacts and heavy butt-type arcing contacts; Herkolite bushings; and internal mechanisms. These features assure these breakers' ability to give thoroughly reliable and dependable service with long life and very low maintenance.

Manually Operated Units Include  
(Single-Throw)

Breaker.

Type HC-5 trip-free manual mechanism, including necessary instantaneous or time-delay current trips and/or instantaneous potential trip with auxiliary switch (maximum of three trips of any type).

Current transformers and relays not included.

Standard clamp-type terminal connectors No deduction for omission. Necessary oil.

For remote-mounted breakers, mounting plate, one horizontal and two vertical hangers, with bell cranks and clevises are included.

## (Double-Throw)

Two single-throw breakers with mechanical interlock, and two operating levers with mechanical cross trip.

Electrically Operated Units Include  
(A.C. or D.C.)  
(Single-Throw)

Breaker and Type MS-5B trip-free solenoid mechanism mounted back-to-back on a steel plate, direct-coupled.

Closing relay. One potential trip coil.

Current-trip coils, relays, and current transformers not included.

Four-stage auxiliary switch. Terminal board.

Standard clamp-type terminal connectors. No deduction for omission. Necessary oil.

Copper-oxide rectifier (if a.c. operated).

Maintenance closing device (as required).

## (Double-Throw)

Two single-throw breakers, and two solenoid mechanisms electrically interlocked.

## Type FK-143

50000 KVA—{ 7.5 KV— 600 Amperes  
5 KV—1200 AmperesTriple-Pole, 600-Ampere,  
Electrically Operated, Frame-Mounted

	5000	1200		860.00	875.00	900.00	1000.00	1095.00	

\*For double-throw breaker, price is twice that of the corresponding single-throw breaker.

†Interrupting rating of FK-142 breakers, based on CO-2 min-CO duty cycle, and of FK-143, based on CO-15 sec.-CO duty cycle.

‡Although the listed standard nameplate ratings are 5000 and 7500 volts, it is recommended that these breakers should not be applied on service voltages in excess of the 4160-volt class.

§25-cycle ratings, as compared with 60-cycle ratings, are 600-700 and 1200-1400 amperes.

||Breaker and manual mechanism mounted back-to-back on a steel plate.

¶Framework may be angle, pipe, or self-supporting steel for FK-143; angle or pipe for FK-142.

**G-E Type FK-33 Oil Circuit Breakers****Manually or Electrically Operated****400 Amperes, 2500 Volts—15000 Kilovoltamperes**

Type FK-33 oil circuit breaker is recommended for use on a. c. circuits in small and isolated plants, and for other duties when a breaker of moderate rating is desired.

It is of the single-tank type all poles are in one tank.

Material included: Type FK-33 breaker, Type HA-2 operating lever, necessary instantaneous or time-current trips, mounting details for breaker element, bell cranks with remote control, terminals and nuts, necessary oil.

For solenoid-operated breaker, price also includes solenoid closing relay, a potential trip

coil (no current trip coils included), a terminal board, and a four-stage rotary auxiliary switch.

**\*Single-Throw**

					368
					418

\*For a double-throw breaker, the price is exactly twice that of a single-throw breaker.

**G-E Type TB-2 Temperature Relays**

The Type TB-2 relay is recommended for protecting machine bearings against overheating. The contacts are silver-to-silver, and are operated on the quick-make and quick-break principle. Contacts will carry 5 amperes continuously or 20 amperes for 1 minute. They will interrupt 1 ampere at 125 volts, d.c. or 7 amperes at 220 volts, a.c.

Each relay has a syphon bulb containing a volatile liquid which vaporizes when heated to a predetermined temperature. This causes a bellows to expand and operate the contacts. Relay is adjusted to operate at approximately 105°C. After the syphon cools, the contacts will remain in the operated position and must be reset by hand.

Relay, exclusive of bulb, is 3¾ inches wide and 6 inches high.

2132592G12		10	20

**G-E Miscellaneous Switchgear Devices****Type SB-1 Control and Instrument Transfer Switches****Panel Mounting Typical Type SB-1 Control Switches**

These multicontact switches are for the control of circuit breakers, electrically operated governors, rheostats, and other devices, for the transfer of current and potential coils of instruments, and for many other similar applications.

They are rotary type with cam-operated silver-to-silver contacts. The contacts will carry 20 amperes continuously and are insulated for 600 volts. They will interrupt 10 amperes at 125 volts d.c., non-inductive circuits.

Switches are compact, totally enclosed, dead-front, and require small panel space. Circuit-breaker control switches have a red-green mechanical target that shows last previous operation. Instrument transfer switches have fixed or removable handles according to application. The design is extremely flexible and can be applied to meet special requirements.

\*Handle not included; order as required at \$2.00 each.

## G-E Miscellaneous Switchgear Devices

## Type ET-5 Indicating Lamps

The ET-5 indicating-lamp combination is simple and sturdy in construction.

They are used separately wherever a clearly visible indication is desired, or in combination with control switches. They have a high visibility with low wattage consumption and long life. They occupy little space, and may be mounted on 1 1/2-inch centers.

The device includes a G-E incandescent telephone lamp, T2 bulb, No. 902 slide base with raised prick punches, No. 59X243, 24 volts, 0.032-0.038 ampere. Screw-type compound color caps easily removed and replaced are used in the escutcheon over the lamp and give positive indication. Six colors, clear, red, green, white, blue, and yellow, are listed. Color of cap desired should be specified when ordering complete device. Spare caps for renewals should be ordered separately by designated No.

The resistor element slides over the receptacle body from the rear, and the complete device has provision for soldered connections.

Binding screws are included for use where soldered connections are not desired.

Includes lamp, resistor, and color cap.

Furnished with lamp No. 59X243, color cap, and resistor (when required). When ordering, specify color of color caps. Standard package, 25.

## Compound Terminal Boards

## With Cup Terminals

Used where a large amount of small wiring is necessary. Nominal rating, 30 amperes. Terminals take wire up to No. 12 or 19/22.

Compound terminal boards are particularly adapted to use with devices on switchboards that have flexible leads instead of studs, such as certain types of relays, trip coils, etc.

## Type PK-2 Test Blocks and Plugs

## Type PK-2 Test Block, 4-Pole, with Cover in Place

For testing instruments, meters, and relays. Essentially 4-pole and 6-pole jacks, provided with molded Textolite covers having internal plug contacts. Furnished with various combinations of auxiliary contacts which automatically short-circuit the current transformer when the cover is removed. A block and its cover are the equivalent of a double-throw test switch.

The 4-pole and 6-pole test plugs are provided with studs and links, and may be permanently connected to the testing equipment for any of the various test methods in use. Testing setup is obtained simply by removing the cover and substituting the properly connected test plug. Normal connections are restored by replacing the cover. Rated 250 volts, 10 amperes.

## G-E Relays and Auxiliary Relays

**Type IBC Time Induction Overcurrent Relay With Directional Control, Semiflush Drawout Construction, 6½ Inches Wide and 15½ Inches High**

**Type IAC Time Induction Overcurrent Relay, Semiflush Drawout Construction, 6½ Inches Wide and 9½ Inches High Over all**

**Type HFA Instantaneous Auxiliary Relay, 6-Circuit**

**Type HGA Instantaneous Auxiliary Relay**

Relay protection is applied to an electric system for minimizing interruptions of service and damage to apparatus which result from abnormal conditions in the system. The primary considerations are:

To maintain service over the greatest possible portion of the system, under all conditions. To disconnect only the circuit in which a fault has developed. To disconnect the faulty portion as quickly as possible. To prevent injurious heating caused by short circuits or heavy overcurrents.

## Types IAC and IAV

## Induction Time-Overcurrent and Voltage Relays

Type IAC induction time relays are for the over-current protection of single-phase and polyphase circuits where permanence of operating characteristics and high accuracy in timing are essential. The time of operation is inverse at low current values, and approaches a definite time at higher current values. These relays are for use in connection with current transformers, for mounting on switchboard panels.

The Type IAV overvoltage and undervoltage relays are

## \*Type IAV Overvoltage and Undervoltage Relays—60 Cycles

RATINGS		Undervoltage		Combined Undervoltage and Overvoltage		Approx. Ship. Wt. Lb.

## G-E Type LP-101 Knife Switches

The solid stationary tongue-type contacts and double blades of Type LP-101 G-E knife switches offer the advantages of low temperature rise, ease of operation, and reduced periodic maintenance year after year. Switches are back-connected for mounting on 1 to 2-inch panels. All are provided with silver-to-silver line-pressure contacts that materially lengthen the useful life of the switch.

Switches 400 to 1200 amperes have round threaded studs, with two nuts per stud. Single-throw switches are furnished with one cable-terminal connector per pole; double-throw, with two.

Switches 1600 amperes and above have laminated studs. When ordering, give direction desired, whether horizontal or vertical; otherwise vertical slots will be furnished.

Type LP-101 knife switches are approved by, and meet all requirements of, the National Board of Fire Underwriters. They are made in single, double, triple, and 4-pole combinations for either single or double-throw operation without provision for fuses. Switches with provision for NEC Standard fuses are available in similar combinations for single-throw operation only in capacities up to and including 600 amperes.

Order by No., or give full description stating: poles, throw, ampere and voltage rating, with or without fuse connections, and any special requirements.

Write for information on special requirements, accessories, etc.

## G-E Type LG-218 Indoor Disconnecting Switches

Fig. 1. Single-Pole, Single-Throw 7500-Volt, 3000 Amperes Disconnecting Switch Front-Connected on Class A-4 Porcelain Insulator Units

Figure 2

Figure 3

Figure 4

Figure 5

Figure 6

## Single-Throw Disconnecting Switches

Figure 7

Figure 8

Figure 9

Figure 10

## Double-Throw Disconnecting Switches

The Type LG-218 switches are of laminated blade construction, with each blade composed of two pieces of hard-drawn, high-quality copper, contacting over stationary copper tongues. Switches have silver-to-silver line-pressure contacts at both the hinge tongue and the contact tongue. Contacts are self-adjusting, and pressure is maintained by phosphor-bronze spring washers.

Each switch is mounted on porcelain insulators with metal bases. Insulators are in accordance with N. E. M. A. Standards.

All switches include blade latches. Up to and including

1200 amperes, all switches have round studs; up to and including 600 amperes, pressed-tube cable-terminal connectors with contact nuts are included. For 1200-ampere switches, terminal connectors must be ordered as extras, if desired. Switches above 1200 amperes are provided with laminated bar connections; no cable-terminal connectors are included. The switches can be had with the laminations of any back-connected stud either vertical or horizontal, but unless otherwise specified, the switches will be furnished with contact-stud laminations horizontal; hinge-stud, vertical.

When ordering, specify the type, figure number, and the voltage and current rating.

For ratings above 23000 volts, or 4000 amperes, and for grouping of three switches on one base, write for information.

Double-blade, double-throw transfer, or single-throw, tandem transfer switches in ratings listed for Type LG-218 switches are also available upon application.

## G-E Current-Limiting Power Fuse Units

### Type EJ-1, For Indoor Service—Type EJO-1, For Outdoor Service

Limits the short-circuit current to a value considerably below that usually encountered in short-circuit interruptions. The link melts on the rising current-wave, limiting further rise by the rapid increase of resistance, and causes complete interruption at the first current zero. The fuse unit acts as a current-limiting device in this manner on all currents of sufficient magnitude to melt the fuse link before the current reaches the peak of its initial normal short-circuit value.

The fuse unit consists of one or more fuse wires, wound on a heat-resisting core and surrounded by quartz granules enclosed in a glass tube with a metal ferrule at each end.

There is no discharge during interruption, no noise, and negligible gas pressure. The fuse units may be completely enclosed and mounted with the same electrical clearances used for noninterrupting devices of the same voltage rating, such as disconnecting switches, etc. This makes them particularly suitable for mounting in metal-enclosed switchgear, in any location where space economy is needed, or where expulsion fuses are not acceptable. Their high interrupting ratings are also strong recommendations for their use.

Two types available: Type EJ-1 for indoor service only, and Type EJO-1 for outdoor service at all voltages and for indoor use at voltages above 5000.

Type EJ-1 indoor unit is made in three tube sizes:

**Size A:**  $\frac{13}{16}$ -inch diameter ferrules, for use interchangeably with No. 197563 G-E 2300-volt potential-transformer cartridge fuses.

**Size B:**  $\frac{19}{16}$ -inch diameter ferrules, for use interchangeably with Type ES-1 G-E spring-operated potential-transformer fuse units.

**Size C:** 2-inch diameter ferrules, the standard line of current-limiting fuse units.

The Type EJO-1 outdoor units are available only in the Size C, 2-inch diameter ferrule units.

23000	EJO-1	26.00	85	36.00	93

### Types EF-1 and EF-2 Switches

Type EF-2 Fuse-Disconnecting Dropout Switch, 15000 Volts

**Type EF-1.** This is a combined fuse cutout and disconnecting switch to protect circuits against short-circuit currents. It consists of a galvanized steel-channel base, insulators, and a hinge-and-contact assembly for mounting a Type EG-1 fuse unit.

**Type EF-2.** This switch is similar to the Type EF-1 plus the dropout feature, i.e., when the fuse blows, the fuse opens to a dropout position as illustrated.

For fuse-disconnecting switch operation, use non-metallic switch hooks indoors, and superinsulated hooks outdoors.

In ordering, give phase-to-phase voltage and frequency.

Disconnecting Switch, Without Fuse			Combination of Types FR-2 Resistor and Fuse Disconnecting Switch, Without Fuse Units

### Type EG-1 Expulsion Fuse Units

The Type EG-1 fuse is of the spring-expulsion type, providing rapid operation high interrupting ability, and positive operating performance. Available in current ratings as included in the price list below; higher voltage ratings furnished on request.

Each fuse unit is stamped with its rating, followed by the letter E. This indicates that the fuse will carry its rated current continuously, and that it will meet all N.E.M.A. requirements for such fuses.

Volts	All Ratings, Each	Length, Inches	Approx. Ship. Wt. Lb.

## G-E Outdoor Air Switches

### Type TA Horn-Gap Switches

Type TA Horn-Gap Switch, Triple-Pole, Single-Throw, 34500 Volts, 400 Amperes, With Direct Manual Operating Mechanism

The Type TA switches are group-operated and of tilting-insulator construction. The application of these switches is most advantageous where maintenance of service and reliable switching equipment are of great importance. Features are:

Spring-pressure silver line contacts.

All-copper current-carrying parts.

Coiled buffer springs assist switch operations.

Corrosion-resisting pins prevent rusting and binding.

All steel and malleable-iron parts hot-dip-galvanized.

Standard cement cap-and-pin insulators.

Insulators interchangeable with those on other outdoor devices of same rating.

Manual or motor mechanism can be padlocked in either open or closed position.

Arc horns prevent burning of contacts during switch operation.

The TA switches are available in triple-pole groups, the poles being interconnected by a common shaft to provide simultaneous operation of all the poles from a single mechanism.

The switch parts consist of the blade, a short copper bar of ample cross section; the stationary contact, made up of two large semicylindrical copper blocks floating against heavy springs that force them against the blade for line-pressure contacts; and the tilting insulator which carries the blade. Flexible, woven wire copper braids provide full copper current carrying from all fixed to movable parts.

All prices are for 3-pole switches, including manual operating mechanism with a maximum of one offset bearing, and including interconnecting pipe or equivalent square shafting and bolted terminal connectors.

7500	400	365.00	570	.....	.....	.....	.....

### Type TB Switches

This is a group-operated tilting-insulator switch for low-revenue-producing installations. It is especially suitable for pole-top mounting on rural lines, distribution circuits with light loads, and small industrial applications. The insulators are of the 2-inch, bolt-circle, rural type. The switch parts are of high-quality, line-pressure contact, with non-corrodible hardware parts, and horn gaps.

Volts.....	7500-SS	15000-SS
Amperes.....	200	200
Each.....	\$135.00	160.00

Prices include triple-pole switches with direct mechanism (with single outboard bearing and guide plates when required and vertical operating pipe).

G-E Outdoor Air Switches

Type RD Switches

Type RD Single-Pole Element, 34500-Volt, 600 Amperes

G-E Outdoor Air Switches

Type RK Switches

Single-Pole Element of Type RK Switch, 46 KV, Switch Closed

A group-operated switch of the rotating-insulator construction. Available in two arrangements:

1. Horn-gap switch for horizontal, upright mounting on outdoor steel structures or pole tops, and used for opening transformer-bank primaries, or for line sectionalizing.

2. Disconnecting switch (less arc horns) for vertical mounting, and used for isolating power circuit breakers or lightning arresters.

Contacts of the full-floating, spring-pressure, silver-line-contact type. They consist of two large, semicylindrical, silver-surfaced, copper drop forgings, enclosed in a housing, and backed by double, helical, nonferrous springs. The ends of the housing are flared to guide the blade. Flexible copper braids of ample size join the contact blocks to the switch terminal. The blade makes line contact, and the pressure on it increases as the contacts spread.

The blades are made of one piece, hard-drawn copper tubing. The contact end is pressed flat and is silver-surfaced. It is clamped at the hinge to the upper link of a parallelogram linkage. Extra-flexible copper braids carry the current from the blade clamp to the hinge support.

The switch is opened and closed by a dual motion of the blade. In closing, the blade first completes a full vertical arc of travel to the horizontal position, and then moves forward into the stationary contacts. In opening, this operation is reversed.

Can be operated either manually or by a motor-operated mechanism.

Prices are for 3-pole switches, including manual mechanism, with one outboard bearing, vertical operating pipe, couplings, guide plate, ground braid as required, and bolted terminal connectors.

	600	650.00	730
	1200	990.00	1150

Group-operated of the rotating-insulator, horizontal-break, two-insulator stacks-per-pole type, for mounting on steel frame structures or pole tops.

They are equipped with horn gaps, and are applicable for the opening of transformer-bank primaries, and for line sectionalizing.

Also they are applicable for isolating purposes, for such devices as power circuit breakers, and lightning arresters, when furnished without arc horns.

These switches incorporate the following principal construction features: Self-aligning spring-pressure silver line contacts; nonferrous construction above the insulator caps; hot-dipped galvanized steel and malleable-iron parts; corrosion-resisting pins and roller bearings (Timken).

Blades of switches rated 23 kilovolts and above are of the broken-back construction, to provide icebreaking action at the contacts.

Contact consists of two semicylindrical, silver-surfaced copper drop forgings, enclosed in a housing with double helical nonferrous springs. The flared ends of the housing guide the blade, which makes line contact, the pressure on the blade increasing as it spreads the contacts.

Prices include triple-pole switch, with bolted terminal connectors, and manual operating mechanism with vertical operating pipe couplings, guide plates, grounding braid, and outboard bearing, as required.

Motor Operating Mechanisms

Prices of group-operated air switches include manual mechanism with a maximum of one offset bearing, vertical operating pipe and, when included in the order, pipe couplings and guide plates. Prices of motor operating mechanism include the additional equipment to add to the manual mechanism for electrical operation. Prices of the motor operating mechanism also include one 4-stage, 4-pole auxiliary switch and necessary control relays, but no control switch; control switch must be ordered separately.

Prices on application.

## G-E Outdoor Air Switches

## Type FA Hook-Operated Switches

Made in single-pole units, single, and double-throw.

Suitable for disconnecting purposes and should not be used to open load currents. Switch parts are mounted on G-E standard-type insulators.

Blades consist of two hard-drawn copper sections mounted back-to-back to form a blade of great mechanical strength. On switches rated above 23000 volts, the blades are of truss-like formation. The blades slide over a tongue-like contact and silver-to-silver liner pressure is maintained by phosphor-bronze spring washers, for maximum conductivity.

Type FA-101

Note: 2000, 3000, and 4000-ampere switches are available upon application.

Type FD-103

## Type FD Hook-Operated Switches

These switches are made in single-pole, single-throw units. Made in ratings of 7500S and 15,000S volts and 200 amperes. Suitable for disconnecting purposes only, and not used to open load currents.

The switch parts are mounted on 2-inch bolt-circle porcelain insulators.

Switches are of the laminated blade, tongue-type silver-to-silver contact construction.

7500-SS	200	\$12.70	30	\$18.85	50
15,000-SS	200	14.40	35	22.35	60

All switches are provided with blade latches, blade guides, and operating eye.

## G-E Switch Hooks

Available with or without rain shield and grounding device. For use with outdoor air switches.

The lower portion of the rod is turned from carefully selected wood. The upper portion is a tubular section made of an insulating compound. Hook is an aluminum-alloy casting.

## G-E CR9504 Thrustors

Provides Smooth Straight-Line Thrust From Electric Motor Drive

This is a self-contained hydraulic device which exerts a smooth, straight-line thrust (50 to 3200 pounds maximum thrust) in one direction throughout a definite distance (2 and 16-inch maximum stroke). The return stroke is effected by gravity or a spring.

The device can repeat this cycle of operation indefinitely at a rate of 10 to 30 times per minute depending on the size of unit. It is driven by a built-in fractional h.p. motor and therefore the power consumption is small.

CR9504 Thrustor performs services similar to those accomplished by air cylinders and large a.c. and d.c. magnets and solenoids.

Order by CR number and form giving voltage, frequency and phase.

## †CR9504-L—50 Pounds Maximum—2-Inch Stroke

220	1	60	2.5	280.00

\*Inrush current for a.c. motors is approximately 5 times running current.

†Information on d.c. and 25-cycle forms on application.

†Same as 220/440-volt, 3-phase thrustors, plus additional price of transformer.

## G-E Load-Center Unit Substations

For Distributing Low-voltage Power in Industrial Plants, Commercial

Buildings—For Power-station Auxiliaries

G-E Load-Center Unit Substation, With Pyranol Transformers and Metal-Enclosed Drawout Air Circuit Breakers, Installed Indoors at Load Centers

Load-center distribution has many big advantages. Elimination of long secondary cable runs, which cause voltage drop, results in better voltage conditions. Proper voltage at point of use means improved motor performance, bright and steady lights. G-E metal-enclosed load-center unit substations are completely factory-engineered and factory-assembled, and are shipped ready to install. They can be installed either indoors or outdoors. They can be put underground in vaults, on the roof, on balconies, or in production areas, usually in space that is otherwise unused.

### Delivery and Installation

G-E load-center unit substations can be selected and ordered quickly and easily from a line of standard units and standard arrangements that fill all requirements of a broad range of applications. Only one purchase transaction is necessary. These units are shipped in two or three complete sections—ready to be bolted together and connected to the power cables. Standardized units, completely assembled and wired at the factory, require no special knowledge by your men to install or to disconnect for removal to new locations.

All live parts are metal-enclosed. Circuit breakers of adequate interrupting capacity insure adequate circuit protection. Pyranol, which is noninflammable, is normally used for the cooling and insulating liquid of the transformer, providing safety for indoor installations.

### Flexibility in Selection of Equipment

General Electric load-center unit substations are adaptable to your particular need. A wide variety of high- and low-voltage switching equipment is available, including oil,

Pyranol, or dry-type transformers, and circuit breakers for either manual or electrical operation.

### Exterior Design

The old style of substation construction, with skeleton steel framework and exposed equipment, is a thing of the past. G-E unit substations are modern in appearance and are compact. They take much less space than the old type. Fences are no longer needed to protect personnel.

### Industrial Lighting

When your industrial load is not heavy, the same load-center unit substation which supplies motor power can be used. Dry-type lighting transformers (capacities 5-25 kilovolt amperes,) which step 480 volts down to 120 volts, can be mounted or hung almost any place in the plant to supply the lighting load.

### Ratings

These standard load-center unit substations serve loads 600 volts and below (208Y/120, 480 volts, etc.) from incoming lines up to 15 kilovolts.

One complete unit substation may consist of metal-clad incoming-line section with oil-blast or magneblast power circuit breakers, a Pyranol (or dry-type, or oil-filled) transformer section, and a low-voltage feeder section with drawout air circuit breakers.

Here is the modern way to help insure an adequate power supply at all times, more important than ever in the light of present conditions.

G-E engineers can help you select a low-cost load-center unit substation, compact, complete, to meet all your requirements. Other apparatus can be combined in one of these units if, for instance, you need the addition of a power rectifier. For further information, ask for latest bulletins.

## STEEL TRANSMISSION TOWERS AND SUBSTATIONS

*Complete substations to meet your specification needs are available from Graybar.*

Transformers • Lightning Arresters • Safety Lighting

## G-E Watthour Meters

All General Electric a.c. watthour meters have substantially the same operating characteristics. The mechanical details differ with the application, type of mounting, and circuit.

These meters have been called "wide-limit" meters because of their straight-line characteristics. When correctly adjusted, the 15-ampere meter, for instance, has a load-registration curve that practically falls on the 100 per cent line over the range from 0.5 to 60 amperes.

Long-life accuracy is assured by the use of alnico magnets, a low-friction bearing system, and a one-piece supporting frame for accurate and permanent positioning of all parts.

## \*For Alternating Current

**Types I-30-S and I-30-A—Single-Phase**  
60 Cycles

Type I-30-S

Type I-30-A

**Type I-30-S** is the standard meter for socket connection. Connections are made in the socket to receptacles for switch-blade terminals. Approximate dimensions, 7x7½ inches.

**Type I-30-A** is the standard bottom-connected unit. It is suitable for all conventional applications either with the all-service or enclosed mounting. Approximate dimensions, 5½x8½x7 inches.

Both the A and the S types can be used on circuits where the voltage may be 10 per cent above or below the rated voltage of the meter. When ordering meters for voltage outside these limits, the normal operating voltage should be specified.

**Types V-2-S and V-2-A—2-Element—3-Wire**  
60 Cycles

Type V-2-S

**Types V-2-S and V-2-A** are primarily for use on network systems of two lines and the neutral of a 4-wire Y, 3-phase circuit. The phase displacement of this circuit requires a 2-element watthour meter.

The meter is also available for other 3-wire polyphase circuits, and for 3-wire, single-phase circuits where the voltages are so

unbalanced that a 3-wire, single-element meter will not give the required accuracy.

The Type V-2-S is for socket connection and the Type V-2-A for bottom connection. Approximate dimensions for the S type, 7x8½ inches; for the A type, 7½x6¾x8½ inches.

Horizontal	3	76X41	2.75	76X47	3.25

\*Information and prices for d.c. meters on request. †The potential coils are wound and rated for the line-to-neutral voltage, and these are the values listed. For example, order meters rated 120 volts for use on 120-240-volt, 3-wire circuits.

## G-E Watthour Meters

Types V-3-S and V-3-A—Polyphase—2 Element—3-Wire  
60 Cycles

Type V-3-S

Type V-3-A

**Type V-3-A** is for wall mounting, bottom-connected, and can be used by itself or in conjunction with the usual polyphase meter trims. The terminal arrangements and block dimensions are standard for polyphase meters. A maximum of 15 terminals can be provided, eight terminals for current connections and seven terminals for potential connections, contact-device connections, and test links. Approximate dimensions,  $9\frac{1}{2} \times 6\frac{3}{4} \times 6\frac{3}{8}$  inches. Approximate shipping weight, 12 pounds.

**Type V-3-S** is for socket mounting. Terminal blades up to a maximum of eight provide for connections to almost any standard circuit. This meter requires a socket entirely different from that of the single-element meter on the 2-element Type V-2-S meter. Sockets have up to eight terminals. Approximate dimensions, including socket,  $13\frac{3}{4} \times 7\frac{1}{2} \times 11$  inches. Approximate shipping weight, 10 pounds.

G-E Switchboard Watthour Meters

For Use with Instrument Transformers

Type DS-20

This line of back-connected single-phase and polyphase meters combines the improved elements of the new front-connected meters with the narrow 5½-inch universal-type switchboard case.

These meters are listed only for use with instrument transformers, i.e., in 2.5-ampere ratings. However, they are also available in 5 or 10-ampere self-contained ratings. Self-contained sizes have liberal overload rating. These meters may, therefore, be used with good accuracy on loads up to 300% of normal load and with ample margin of safety on loads considerably in excess of this.

Test links are not provided for these meters. Separate test blocks are available for this purpose.

Type IS-8

Single-Element—2-Wire—Single Phase

For 3-wire service, the Type DS-19 meter is recommended; 3-wire, single-phase circuits can, however, be metered with the 2-wire meter, No. 21X925, when connected with double-primary, single-secondary, 3-wire type of current transformers.

Approximate dimensions, 6x5½x7 inches.

Approximate shipping weight, 20 pounds.

Each.....	\$108.00	108.00

\*No potential transformers.

Catalog numbers are for ball-type bearings. Jewel-pivot bearings are available at no increase in cost.

Catalog numbers and prices do not include instrument transformers. Specify ratios of transformers with which meter is to be used. It is standard practice (for meters of modern construction) to use 2.5-ampere meters with current transformers having 5-ampere secondary rating, since this results in the best overall accuracy and performance.

G-E Type IB-10 Portable Standards

This new G-E standard combines, for the first time, the capacity essential for the testing of both high- and low-current-rated meters with the light weight and small size of the best low-capacity standards.

Wide operating range and excellent testing flexibility have been obtained by the use of four current coils—1, 5, 12.5, and 50-ampere. All coils will carry 200-per cent current continuously. Thus, service meters of all ratings up to 100 amperes can be tested.

The Type IB-10 standard represents advancement in all details. It has a completely new electromagnet with low inherent errors and excellent load, voltage, and temperature characteristics. Excellent balance (accuracy) between current circuits is inherent in the design.

The IB-10 is the first standard to use the G-E anti-parallax arrangement of dial and pointers. This promotes speed and accuracy because the reading is always the same regardless of the angle from which the scale is viewed. The large sweep hand, coupled to the disc shaft, makes one revolution for each one of the disc. The antiparallax scale is divided into 100 clearly marked divisions in order that readings even closer than one one-hundredth of a revolution can easily be taken. Small dials within the large one make it possible to take readings up to 100 revolutions of the disc.

Multiplier Boxes

Multiplier boxes are used to increase the voltage range. They are calibrated and furnished with the standard.

For single rating, 480 volts, add \$60.

For double rating, 480 and 600 volts, add \$80.

G-E Type MC Autotransformers

These autotransformers can be used on circuits where the voltage may be 10 per cent above or below the rated voltage of the autotransformer. They are intended for use with poly-phase meters in var metering.

When ordering autotransformers for voltages outside these limits, the normal operating voltage should be specified.

## G-E Watthour Demand Meters

60 Cycles

Continued

## Types VM-2-S and VM-2-A

With Type M-20 Register

These meters are for use on standard 3-wire circuits. They are particularly intended for use on circuits consisting of two "line" wires and the "neutral" obtained from a 4-wire Y, 3-phase circuit. They are also suitable for use on a 3-wire, single-phase circuit where the voltage unbalance makes a 2-element meter desirable. The meters can also be used as 3-wire, 2 or 3-phase circuits.

The Type VM-2 meters are not furnished for use with instrument transformers. If such meters are desired, use Type VM-3.

These meters can be used on circuits where the voltage may be 10 per cent above or below the rated voltage of the meter. When ordering meters for voltages outside these limits, the normal operating voltage should be specified.

Approximate shipping weight, 16 pounds.

## Type VM-2-S

## G-E Watthour Demand Meters

60 Cycles

Concluded

## Type VM-4-A

With Type M-20 Register

These meters are intended for the circuit obtained from a bank of three power transformers connected in Y and with the neutral brought out.

These meters can be used on circuits where the voltage may be 10 per cent above or below the rated voltage of the meter. When ordering meters for voltages outside these limits, the normal operating voltage should be specified.

Approximate shipping weight, 30 pounds.

Volts	Amperes	Full-Scale Kw.	15-Min. Interval No.	30-Min. Interval No.	Each

*120Y	2.5	2.2	86X461	86X462	118.80

## Types VM-6-S and VM-6-A

With Type M-20 Register

These meters are intended for the circuit obtained from a bank of two or three power transformers connected in  $\Delta$ , with the center tap of one transformer brought out, provided the 120-volt voltages of the lighting circuit (between the center tap and the outer wires) are balanced within limits that would permit the use of a 3-wire, single-phase watthour meter on the lighting circuit.

The meters have two 240-volt potential coils and three current circuits, with the 3-wire current coil located on the left-hand element.

The meters can be used on circuits where the voltage may be 10 per cent above or below the rated voltage of the meter. When ordering meters for voltages outside these limits, the normal operating voltage should be specified.

Approximate shipping weight, 18 pounds.

## G-E Type HI-1 Thermal Watt-Demand Meters

Type HI-1-S

Type HI-1-A

The Type HI-1 is a separate meter for the indicated measurement of maximum demand. It is admirably suited to use on small loads because of the low maintenance and cost. Unless it is necessary to have recorded measurements, as in the graphic or printing types, it can be used for loads of any value.

Approximate shipping weight, 13 pounds.

## G-E Portable Transformers

For use with meters, instruments, and similar devices. Used in laboratory and general testing work.

Type JP-1

### Current Transformers

2500 Volts—25-125 Cycles

Current transformers include a wide range of primary currents. For example, the Type P-3 is a multi-range transformer having either three or six primary ratings. Changes in ratio are made by changing the link connections on the top of the case. The JP-2 is of the through type and has much higher ratings. Type JP-1 is especially suited for industrial work. The accuracy of these transformers is sufficiently

high to obviate the need for correction during most commercial tests. However, certificates of phase-angle and ratio characteristics can be furnished.

### Type P-3

No.	Each	Primary Cap., Amp.	Ratio	
248742	\$118.00	5/10/20	1/2/4	:1
248743	118.00	15/30/60	3/6/12	:1

89X868	175.00	1200/1500/2000/2500	240/300/400/500	:1

### Potential Transformers

Under ordinary conditions of load and power-factor, the accuracy of these types will not vary more than 1 per cent from rated ratio.

When used with a test certificate, the ratio can be corrected to within one tenth of 1 per cent, and the phase angle can be corrected to within three minutes.

Type E-6 is rated 25 volt-amperes, and is compensated for 12.5 volt-amperes.

Type JE-9 is rated 200 volt-amperes, and is compensated for 50 volt-amperes.

## G-E Strip-Chart Recording Instruments

## Type CD—Switchboard and Portable Types

60 Cycles—For A.C. and D.C.

Switchboard  
Back-Connected

Portable

Type CD recording instruments are available for switchboards, surface or semiflush mounting, or in portable form. There is a complete line for a.c. or d.c. circuits, including ammeters, voltmeters, wattmeters, frequency meters, and power-factor meters. Standard chart speeds are 3 inches per hour for switchboard instruments. Portable instruments have a gear shift that permits chart speeds of either 3 inches per hour or 3 inches per minute. The driving mechanism may be either an eight-day, spring-operated clock, or a telechron motor, as specified.

Type CD recording instruments are available with provision for inkless recording at a slight increase in price.

This listing covers only the portable instruments with telechron motor drive. Switchboard instruments have somewhat lower prices; dimensions: instrument, 12x5½x10 inches and chart, 4⅜ inches wide by 60 feet long. Instruments with spring-driven, hand or motor-wound timing mechanisms have somewhat higher prices.

## Type CD-13—For A.C.

Potential resistances self-contained.

Instrument is calibrated for 25 to 60 cycles, a.c.

Voltmeters will read correctly on d.c. circuits but ammeters will read approximately 3 per cent high if used on d.c. circuits.

Approximate shipping weight, 60 pounds.

## Voltmeters

Double-Voltage Rated.	Volts	0-150 or 0-300	0-300 or 0-750
Each.....		\$273.00	283.00

## Ammeters

2	233.00	15	238.00	5/10	248.00
5	233.00	20	238.00	10/20	248.00

## Type CD-11—For D.C.

Potential resistances self-contained.

Millivoltmeters are used as ammeters with any standard switchboard or portable shunt of 50-millivolt drop. Form 18 shunts are recommended. One set of shunt leads, 5 feet long, is furnished with each millivoltmeter.

Approximate shipping weight, 65 pounds.

## Voltmeters

Double-Voltage Rated.	Volts	0-150 or 0-300	0-300 or 0-750
Each.....		\$310.00	315.00

## Millivoltmeter Used as Ammeter

Millivolts	Each	50
Each.....		\$290.00

Extra length shunt leads: 10-foot, \$12. extra per set; 15-foot, \$18. per set; and 20-foot, \$22. per set.

## Form 18 Shunts

Amperes	Each	Amperes	Each	Amperes	Each
60	\$7.00	150	\$7.00	400	\$10.00
75	7.00	200	7.00	500	11.75
80	7.00	250	7.00	600	11.75
100	7.00	300	8.25	800	15.00

## G-E Strip-Chart Recording Instruments

## Type CF—Inkless Portable

For A.C. and D.C.

Type CF inkless recording instruments are designed to provide recording voltmeters, ammeters, milliammeters, microammeters, wattmeters, and tachometers for applications where reliability and maximum convenience to the user are important.

Recommended for either indoor or outdoor service, the instrument is portable but may be wall or pole mounted.

The inkless recording feature (with no ink to dry up, freeze, or spill) and a chart speed of 1 inch per hour make these instruments

capable of continuous operation for 30 days without attention. Hence, they are ideal for installations where frequent servicing is impractical.

Size, 9¼x8½x6 inches. Chart speed, 4 inches wide by 65 feet long. Chart size, 3 inches per hour standard; 1-inch and 2-inch per hour available; 1-inch per day can be supplied at \$7.00 additional.

## Type CF-1, A.C. Voltmeters

60 Cycles—Accuracy—1½ Per Cent within Normal Range

Volts.....	0-140/280
Each.....	\$110.00

Telechron motor circuits internally connected to element terminals. Instruments can be supplied with separate motor terminals, \$5.00 extra.

## A.C. Ammeters

25-125 Cycles—Accuracy—2 Per Cent of Full Scale

Amperes.....	0-5/10
Each.....	\$110.00

Ammeter has 115-230 or 230-460-volt telechron motor circuit. Connections to separate terminals on terminal block. Motor ratings changed by link arrangement on terminal block.

## Type CF-2 for D.C.

Previously offered only for a.c. applications, the G-E Type CF line has been extended to include d.c. instruments in the usual ratings of voltmeters, ammeters, milliammeters, and microammeters. This means that it is now economical to apply recording instruments to many applications where previously the expense of suitable equipment could not be justified.

All d.c. instruments listed are accurate to within 2 per cent of full-scale value.

## Type CF-2, D.C. Voltmeters

Resistance—Approximately 233 Ohms per Volt

Volts	Each	Volts	Each	Volts	Each
0-3	\$160.00	0-150	\$165.00	0-750	\$180.00
0-15	160.00	0-300	170.00	0-150/300	175.00
0-50	160.00	0-600	175.00		

## Type CF-2, D.C. Ammeters

Amperes	Each	Approximate Resistance Ohms	Amperes	Each	Approximate Resistance Ohms
0-1	\$160.00	0.05	0-7.5	\$160.00	0.007

**G-E Current-Measuring Sets**

For Measuring Amperes Only with Recording  
Ammeter—For A.C.

This current-measuring set is very convenient for measuring the current in the leads to motors and transformers and in feeder circuits, because it permits the measurement to be made without interrupting service.

Set includes a Type CF-1 recording ammeter, test leads, and a Type G-4 split-core current transformer.

When in use, the transformer is clamped around the cable or lead in which the current is to be measured.

Length of leads, 10 feet.

Approximate weight, 22 pounds.

Full-Scale Amperes	Each	Frequency Cycles	Full-Scale Amperes	Each	Frequency Cycles
50/200	\$186.00	60	250/1000	\$200.00	60

300/600	193.00	60	500/1000	200.00	50

Add \$4.00 for 50-foot leads.

**G-E Type AK-1 Hook-On Volt-Ammeters**

For A.C.

This hook-on volt-ammeter is a versatile portable instrument for measuring a.c. and voltage quickly and accurately. It is safe, simple, and easy to use for making measurements on the job. A.c. can be read instantaneously on both insulated and non-insulated conductors by simply hooking the instrument around the line; no necessity for separate transformers or additional equipment of any kind.

The instrument also measures a.c. voltages. Two voltage ranges (0-150/600 volts) are available without the use of auxiliary equipment. It is only necessary to connect leads to the two convenient terminals on the instrument, then click the selector switch to the desired voltage position on the scale. Voltage leads, 6 feet long, are included with each instrument. Approximate dimensions, 13 $\frac{1}{4}$ x3 $\frac{3}{4}$ x2 $\frac{1}{2}$  inches. Approximate weight: net, 3 $\frac{1}{2}$  pounds; shipping, 7 $\frac{1}{2}$  pounds.

**Weston Portable Instruments**

Model 430 D.C. Instruments

For General Plant Testing

Accurate within  $\frac{1}{2}$  of 1 per cent. Permanent magnet moving coil type. Unshielded from external magnetic fields.

Voltmeters are made with single and triple ranges at a standard sensitivity of 1000 ohms per volt, with 5000 ohms per volt also available at an increase in price.

Ammeters and milliammeters regularly made with single and triple ranges, self-contained up to 50 ampere inclusive. Double ranges available on special order. Microammeters are made only in single range form.

Voltmeters with triple ranges only; sensitivity, 1000 ohms per volt. Available with self-contained ranges of 300 volts and 50 amperes. Prices on application.

Dimensions, 5 $\frac{1}{8}$ x6 $\frac{1}{2}$ x3 $\frac{1}{2}$  inches; scale length, 4 inches.

Approximate weight, 3 $\frac{1}{2}$  pounds.

**Voltmeters****Triple Range**

## Weston Portable Instruments

Model 432 D.C. and Single Phase A.C. Wattmeters  
For General Plant Testing

This wattmeter is of the electro-dynamometer type, accurate within  $\frac{1}{2}$  of 1 per cent. Shielded from external magnetic fields.

Made with double voltage and single and double current ranges, self-contained up to 300 volts and 50 amperes. Potential ranges up to 750 volts are available by using external multipliers, higher ranges require the use of potential transformers. Current ranges can be extended beyond 50 amperes by using a 5-ampere instrument in conjunction with the Model 461 current transformer.

These instruments are accurate on all commercial frequencies up to 133 cycles per second. The phase angle is negligible on such frequencies. They may be used on d.c. and checked in comparison with d.c. standards. The temperature error is less than 1 per cent for 25°C. change in temperature.

As the working error is negligible, they may be left in circuit continuously without appreciable effect on the accuracy.

Power consumption: Potential side, at 115 volts, 1.2 watts; at 115 volts, 25 or 60 cycles, 1.2 volt-amperes. Current side, at 5 amperes, .67 watt; at 5 amperes, 25 cycles, .73 volt-ampere and at 5 amperes, 60 cycles, .98 volt-ampere.

Dimensions:  $6\frac{1}{2} \times 5\frac{1}{4} \times 3\frac{1}{2}$  inches; scale length,  $4\frac{1}{16}$  inches. Weight,  $3\frac{3}{4}$  pounds.

## Weston Portable Instruments

Model 433 A.C. Instruments  
For General Plant Testing

Electromagnetic or moving iron type instruments contained in bakelite cases with leather carrying handles. Shielded from external magnetic fields. Accurate within  $\frac{1}{4}$  of 1 per cent.

Instruments can be left in circuit continuously without overheating, therefore, no contact key is used.

Size  $5\frac{1}{16} \times 6\frac{1}{2} \times 3\frac{1}{2}$  inches; scale length,  $4\frac{1}{16}$  inches.

Weight,  $2\frac{1}{2}$  pounds.

## Voltmeters

Self-contained for ranges shown. Higher ranges obtained by using multipliers or Model 311 or 457 potential transformer in conjunction with a 150-volt instrument; for use on frequencies up to 133 cycles per second.

Single Range				Double Range

Double range milliammeters, \$65.

Leather cases: For voltmeters up to and including 300 volts, ammeters up to and including 300 amperes, and single range milliammeters, \$16.00; for voltmeters above 300 volts, \$18.00; for ammeters above 300 amperes, and double range milliammeters, \$18.50.

Weston Portable Instruments  
Model 461 Multi-Range Current Transformers  
For General Plant Testing

This transformer is for primary current ranges from 10 to 800 amperes inclusive. Four self-contained primary ranges of 10, 20, 50 and 100 amperes are brought out to binding posts. With one turn of the primary through the core opening a primary range of 800 amperes results; with two turns, 400 amperes; and with four turns, 200 amperes, etc. The secondary current rating at normal primary current is 5 amperes.

The normal secondary capacity for Type 1 is 5 volt-amperes, and its

ratio accuracy is sufficiently high for use with Models 155 and 433 Ammeters, or Model 329 and 432 Wattmeters, without correction curves. Type 2 has a normal secondary capacity of 15 volt-amperes, and in addition to its greater secondary capacity, offers superior accuracy. Line potentials up to 2500 volts are permissible for both types. Type 1 is supplied in a black bakelite case and Type 2 in a tan or natural color canvas filler bakelite case.

Size,  $6\frac{1}{2} \times 7\frac{1}{2} \times 2\frac{3}{4}$  inches.

When ordering transformer correction curves, always state the model, type and serial number of the instruments to be used. Also give the frequency at which the curves are to be made. If more than one curve is required with different combinations of instruments, list those combinations. Also state the length and size of leads to be used.

Type	1	2
Model 461	each \$65.00	87.50
Weight	pounds $7\frac{1}{4}$	$8\frac{1}{2}$

## Weston Portable Instruments

Model 539 Miniature Current Transformers  
For General Plant Testing

This transformer is intended for use with Models 433 and 528 Ammeters. Accurate within 1 per cent from 25 to 150 cycles. For work requiring medium accuracy, it may be used with Model 155. It is not suitable for use with wattmeters for accurate work.

Four self-contained primary ranges of 2, 5, 10 and 20 amperes are selected through a switch; maximum of 200 amperes inserted primary. Secondary current rating at normal primary current is 1 ampere.

Ranges of 200, 100 and 50 amperes are available when the conductor is passed through the transformer one, two or four times respectively.

Capacity, 2 volt-amperes. Frequency, 25 to 150 cycles. Insulation test, 4000 volts for one minute.

Contained in a sturdy red and black bakelite case. A switch is provided for changing the self-contained primary ranges. In addition, a short-circuiting switch is provided for the secondary winding to prevent damage to the transformer if the secondary circuit should be opened while current is on the primary.

Size,  $5\frac{1}{4} \times 4\frac{1}{2} \times 1\frac{1}{8}$  inches.

Approximate weight,  $2\frac{5}{8}$  pounds.

Model 539 .....each \$41.00

## Weston Portable Instruments

Model 489 D.C. Instruments  
For General Plant Testing

For all-around checking purposes.

Accurate within 2 per cent. Permanent magnet moving coil type. Double range meters have binding posts; triple range meters have pin jacks.

Instruments are enclosed in black bakelite cases. Silver etched dials are  $2\frac{3}{4}$  inches long with black markings.

Size,  $3\frac{3}{4} \times 3\frac{3}{4} \times 1\frac{1}{2}$  inches.

Approximate weight, 11 ounces.

## Weston Portable Instruments

Model 540 Fused 6-Range Volt-Ammeters  
For General Plant Testing—For D.C. Only

Accurate within one per cent. Permanent magnet moving coil type. Contained in bakelite case with hinged cover and leather carrying strap.

All ranges fused for protection from overloads. Voltage ranges protected by single fuse located in a cap. Each of current ranges protected by individual fuse mounted in special compartment covered by hinged back. Ranges are brought out through selector switch to three binding posts, a common +, a current and a potential post. By this arrangement instrument can be so connected to circuit that both current and voltage readings can be taken by turning switch without changing connections. Line is closed

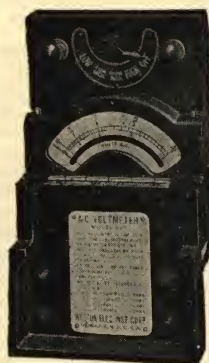

at all times when connected to ammeter binding post.

Dimensions,  $3\frac{5}{8} \times 4\frac{7}{8} \times 2\frac{1}{2}$  inches; scale length,  $2\frac{1}{4}$  inches.

Approximate weight, 2 pounds.

## Weston Portable Instruments

Model 330 A.C. Voltmeters  
For General Plant Testing

In this type of voltmeter, low ranges combined with an unusually high sensitivity are possible. For use wherever current drain caused by instrument must be limited to a low value. Although the high sensitivities of the copper oxide type of voltmeter are not possible with this meter, nevertheless its accuracy is unaffected by wave form and variations in frequencies over relatively wide limits.

Accurate within one percent at 60 cycles, two percent at 25 to 100 cycles. Iron core dynamometer type. Contained in a mottled red and black bakelite case with hinged cover and leather carrying handle.

A range-changing switch is incorporated for selection of ranges. To eliminate parallax errors and facilitate accurate readings, a knife-edged pointer and mirror scale are used.

Dimensions,  $3\frac{1}{2} \times 4\frac{7}{8} \times 1\frac{1}{8}$  inches; scale length,  $2\frac{1}{4}$  inches. Approximate weight,  $1\frac{3}{4}$  pounds.

\*Conforms with A.R.A. specifications.

## Weston Portable Instruments

Model 45 D.C. Instruments  
For General Plant Testing

For general testing work for rugged service.  
Accurate within  $\frac{1}{2}$  of 1 per cent. Permanent magnet moving coil type. Shielded from external magnetic fields.  
Instruments are enclosed in polished hardwood cases provided with hinged covers and carrying handles.  
Size, 8x8x4 $\frac{3}{4}$  inches; scale length, 5 $\frac{1}{16}$  inches.  
Approximate weight, 9.9 pounds.

## Voltmeters

Resistance, 100 ohms per volt, self-contained to 750 volts inclusive; ranges from 750 to 25000 volts may be had by using external multipliers. Voltmeters having a higher sensitivity than 100 ohms per volt available on order.

Leather Case for Standard Model 280 Instruments. ea. \$3.00

## Weston Portable Multi-Purpose Instruments

### Model 785 Industrial Circuit Testers

For Circuit Analysis and Maintenance Testing

Has 27 practical, sensitive ranges applicable to all types of testing.

Especially suited to testing on signal, telegraph, telephone and communication circuits, and power distribution networks, as well as all types of industrial testing.

The meter is a standard 4½-inch Weston instrument with a d.c. sensitivity of 50 microamperes. Has sensitivities of 20,000 ohms per volt on d.c., and 1000 ohms per volt on a.c. ranges. This high sensitivity permits the use of this model on sensitive relay and vacuum tube circuits without disturbing the circuit conditions. Rapid selection of ranges accomplished by marked selector switches.

Can be used for a.c. measurements up to 500 volts and 10 amperes without external transformers. Current transformers can be used with the 1 or 5-ampere range for higher a.c. measurements. The d.c. ranges can be extended through the use of external shunts. Ohmmeter ranges operate from a self-contained battery, and incorporate an adjustment feature for compensating for variations in battery voltage.

Accuracy on all d.c. ranges guaranteed to be within 2 per cent up to 500 volts. Accuracy on 1000 volt range, 3 per cent. Accuracy on all a.c. ranges, guaranteed to be within 3 per cent on 60 cycles. Slightly less accuracy on 25 and 133 cycles. Accuracy on ohmmeter ranges guaranteed to be within 2 per cent of linear arc length.

Dimensions, 13x12½x5½ inches.

Weight with batteries and oak case, 13½ pounds.

Model 785, With Oak Carrying Case.....each \$105.00  
Model 785, In Steel Case for Bench Use.....each 85.00

### Model 639 A.C. Industrial Analyzers

For Circuit Analysis and Maintenance Testing

Type 2

The model 639 Industrial Analyzer is widely used by plant maintenance men, utility service engineers, electrical contractors and those engaged in general industrial testing or installation work. It is designed to analyze industrial loads by measuring current, voltage and power in single and polyphase circuits as well as power factor in 3-phase circuits.

An analysis of plant load conditions with Model 639 quickly detects over or underloaded motors, indicating that relocating transformers or interchanging motors will effect considerable savings. Four Model 610 instruments (a voltmeter, wattmeter, power factor meter, and an ammeter) are included in its strong oak carrying case. The ammeter is equipped with an adjustable pointer stop which allows the maximum value of starting currents to be quickly determined. Accuracy: voltmeter and ammeter, 1 per cent; power factor meter, 1 per cent; wattmeter, 2 per cent. Scale lengths, 3.5 inches.

Only a few simple connections are necessary to place this instrument in circuit; the maze of interconnecting wires necessary when individual meters are used is eliminated. Basic connection diagrams and operating instructions are contained in one card in the cover of the instrument. A pocket manual, containing additional connection diagrams and detailed information relative to the use of this analyzer, is also furnished.

Model 639 has self-contained potential ranges of 150/300/600 volts, current ranges of 5/25/125 amperes and corresponding wattmeter ranges. External current and potential transformers may be used for extending these ranges. Power factor indications are for 3-phase 3-wire only; .30 lag through unity to .80 lead.

On 220 volt 3-phase circuits the 5-ampere range will take care of loads to 1 hp. on the 2 kw. scale; on the 25-ampere range up to 7½ hp. on the 10 kw. scale; on the 125-ampere range up to 40 hp. on the 50 kw. scale. At 440 or 550 volts, the hp. and kw. ranges are doubled. A full technical description including connection diagrams is available upon request.

Size, 18⅞x10⅞x6⅞.

Approximate weight, 32 pounds.

Model 639..... each \$420.00

## Weston Portable Multi-Purpose Instruments Model 633 A.C. Clamp-Ammeters For Circuit Analysis and Maintenance Testing

Permits the measurement of alternating current without breaking the circuit for the insertion of the conventional ammeter or current transformer. Rapid a.c. measurements can be easily made on insulated or non-insulated conductors.

The design of the Model 633 permits its use as a completely self-contained instrument for direct measurement at the point of application. In addition, through the use of the extension cable feature, readings can be obtained at a point remote from the current carrying conductor.

The clamping jaws of this instrument will accommodate any electrical conductor with a maximum cross-section of 2 inches. Their heavy insulation makes it possible to use the instrument on insulated or non-insulated conductors.

Accurate within 3 per cent when used on frequencies between 50 and 70 cycles. Voltage breakdown test, 3700 volts a.c. Scale length, 2.36 inches.

Size, 1 $\frac{3}{8}$ x 4 $\frac{3}{8}$ x 3 $\frac{1}{2}$ inches. Weight, 3 $\frac{3}{4}$ pounds.	
Model 633, Type A-1, for 0-10/25/50/100/250/500 Amperes.....	each \$75.00
Model 633, Type A-2, for 0-10/25/100/250/500/1000 Amperes.....	each 80.00

Leather Carrying Case for Cable, Plug and Receptacle.....	each 15.00

## Weston Portable Multi-Purpose Instruments Model 564 Volt-Ohmmeters For Circuit Analysis and Maintenance Testing Type 3C

The equipment consists of a Model 301 with four 1000 ohms per volt voltage ranges of 600/300/30/3 and resistance ranges of either 0-100000 and 0-1000 ohms or 0-1000000, 0-100000 and 0-1000 ohms. A self-contained 4 $\frac{1}{2}$ -volt C battery is provided for potential. A pair of 50-inch test leads is shipped with each volt-ohmmeter.

Any change in potential of the self-contained battery can be readily compensated for by short circuiting the pin-jacks X-X and adjusting the pointer to the zero ohm position by turning the voltage adjuster located at the top of the name-plate.

All voltage ranges are brought out to pin-jacks. A toggle switch connects the meter in circuit as a voltmeter or ohmmeter.

Pocket size; shipping weight, 6 pounds.	
Model 564, Type 3C.....	each \$36.00
Carrying Case.....	each 6.00

## Weston Portable Multi-Purpose Instruments Model 703 Direct-Reading Sight Meters For Maintenance Testing

Lighting engineers choose this sight meter as the accepted means of measuring illumination in terms of seeing. Serves as an invaluable aid in the promotion of better sight through the use of better light. It is an ideal tool in the selling of lighting equipment, such as lamps and reflectors, in that it can be used for actual demonstration to show the amount of light available at the location.

The use of a multiplier disc over the cell will extend the range to ten times its normal full scale value.

Model 703, Type 3, for 0-75 Foot-Candles.....	each \$18.00
Model 703, Type 6, for 0-75 Foot-Candles; with Viscor Filter.....	each 26.00
Multiplier Disc.....	each .75
Leather Carrying Case.....	each 1.75

## Weston Portable Multi-Purpose Instruments Model 614 Foot-Candle Meters

A direct reading foot-candle meter calibrated directly in terms of tungsten filament standard lamps. Responds quickly to even slight variations of light.

With this meter any user of light can analyze lighting conditions and determine the correct illumination for each particular and individual purpose.

Does not require the use of batteries, voltage or lamps; has indefinite life with permanent calibration.

The operating equipment consists of an indicating instrument, a three-way toggle switch and a Photronic photo-electric cell all mounted on a bakelite panel. The instrument reads directly in foot-candles and has three ranges, 0-60, 0-120 and 0-600 which are controlled by the three-way toggle switch. The Photronic photo-electric cell or light target is hinged so that it can be lifted from the horizontal to the vertical position.

This meter is always ready for instant use. To measure illumination on a horizontal plane it is only necessary to open cover, hold instrument in a horizontal position with the cell or light target lying in its socket and then take the readings. The toggle switch simplifies switching to any of the three meter ranges so as to give a good scale deflection for any value of light intensity within maximum range of instrument. Available with Viscor Filter (range 0-100/250/500).

Assembled in a moulded black bakelite carrying case equipped with hinged cover and strap handle. Length of case, 7 $\frac{1}{2}$  inches; height, 3 $\frac{1}{2}$  inches; width, 2 $\frac{1}{4}$  inches.

Weight, 1.8 pounds.

Model 614, with Viscor Filter.....	each \$50.00
------------------------------------	--------------

## Weston Portable Precision Instruments

For Standardization and High Accuracy Measurements

## Model 341 A.C. and D.C. Voltmeters

Electrodynamometer type. Shielded from external magnetic fields. All ranges listed are self-contained.

Regularly supplied as single, double, and triple range voltmeters for use on direct current, or alternating current at frequencies from 15 to 133 cycles.

Power consumption: 150-volt range at 115 volts, 3.9 watts; at 25 or 60 cycles, 3.9 volt-amperes.

Accurate within  $\frac{1}{4}$  of 1 per cent. Scale length, 5.25 in.

Size,  $8 \times 10\frac{1}{4} \times 5\frac{3}{4}$  inches.

Approximate weight, 11 pound.

## Double Range

Range Volts	Each	Scale Div.	Approx. Resist. Ohms	Range Volts	Each	Scale Div.	Approx. Resist. Ohms
5/1	\$140.00	100	10/2	120/60	\$140.00	120	2700/1350

150/300/750	163.00	150	5000/10000/25000

Leather Case for Model 341.....each \$22.00

For higher ranges, Models 311 or 457 Potential Transformers or external resistors can be used. Instruments for use on frequencies up to 500 cycles are available on special order at \$15.00 extra. In this case, the current drain will be somewhat greater than in standard instruments.

## Model 370 A.C. and D.C. Instruments

Electrodynamometer type. Shielded from external magnetic fields.

Model 370 instruments will maintain their guaranteed accuracy when used on direct current, or alternating current within the following frequencies: ammeters, 15 to 133 cycles; single range milliammeters, 15 to 1000 cycles; double range milliammeters, 15 to 133 cycles.

Power consumption: 5-ampere range at 5 amperes; at 60 cycles, 4.5 watts,

4.7 volt-amperes; at 25 cycles, 4.5 watts, 4.5 volt-amperes.

Accurate within  $\frac{1}{4}$  of 1 per cent. Scale length, 5.25 inches. Size,  $8 \times 10\frac{1}{4} \times 5\frac{3}{4}$  inches.

Approximate weight, 10 pounds.

## Ammeters

Range Amp.	Each	Scale Div.	Range Amp.	Each	Scale Div.

2/1	150.00	100	20/10	155.00	100
5/2.5	145.00	100	.....	.....	.....

Ammeters for 1000-cycle service are available on special order at \$16.50 extra.

## Milliammeters

Range Milli-amp.	Each	Scale Div.	Approx. Resist. Ohms	Range Milli-amp.	Each	Scale Div.	Approx. Resist. Ohms
15	\$145.00	150	1130	150/75	\$150.00	150	45/110
30	145.00	150	325	300/150	150.00	150	14/14
.....	.....	.....	.....	500/250	150.00	100	4.5/4.5

Leather Case for Model 370.....each \$22.00

For certified tests and precise laboratory measurements exceeding the self-contained ranges listed, Models 327, 328, or 461 Type 2 Current Transformers are recommended in conjunction with a 5/2.5 or 10/5 ampere instrument. For less exacting requirements, the Model 461 Type 1 Current Transformer will prove satisfactory.

## Model 329 Polyphase Wattmeters

Electrodynamometer type. Shielded from external magnetic fields. All ranges listed are self-contained.

Model 329 Polyphase Wattmeter actually consists of two electrically independent single-phase wattmeters having their movable coils mounted on a common shaft, with each coil surrounded by its own system of field coils. They may be used independently

with scale errors of less than  $\frac{1}{2}$  per cent, which is of great

importance for measurements on unbalanced polyphase circuits, or on balanced three-phase circuits at low power factors. They are for use on frequencies from 15 to 133 cycles.

Model 329 is made with double current and triple voltage ranges. Current ranges are changed by means of links, and voltage ranges have independent binding posts. Power measurements on direct current, single-phase a.c. two or three-wire circuits, two-phase three or four-wire circuits, and on three-phase circuits may be made directly.

Power consumption per element: potential circuit at 115 volts, 3 watts; at 25 or 60 cycles, 3 volt-amperes. Current circuit at 5 amperes, 0.81 watt. At 25 cycles, 0.83 volt-ampere and at 60 cycles, 0.95 volt-ampere.

Accurate within  $\frac{1}{2}$  of 1 per cent. Scale length, 5.25 in.

Size,  $9\frac{1}{2} \times 10\frac{1}{2} \times 8\frac{1}{8}$  inches.

Approximate weight, 18 pounds.

Leather case for Model 329, \$33.00 each.

For higher ranges, current and potential transformers or multipliers are recommended.

## Weston Portable Precision Instruments

## Model 310 D.C. and Single Phase A.C. Wattmeters

## For Standardization and High Accuracy Measurements

Electrodynamometer type. Shielded from external magnetic fields.

Power consumption, Forms 1 and 3: potential circuit at 115 volts, 2.9 watts; at 25 or 60 cycles, 2.9 volt-amperes. Current circuit at 5 amperes, 0.81 watt; at 25 cycles, 0.83 volt-ampere and at 60 cycles, 0.95 volt-ampere.

Power consumption, Form 2: potential circuit at 115 volts, 4.4 watts. At 25 or 60 cycles, 4.4 volt-amperes. Current circuit at 5 amperes, 3.6 watts; at 25 cycles, 3.7 volt-amperes, and at 60 cycles, 4 volt-amperes.

FORM 1. For use on direct current, and alternating current at frequencies from 15 to 133 cycles. Exactly compensated for temperature changes. Full scale deflection obtained with normal potential and current values.

FORM 2. For low power factor use on frequencies from 15 to 133 cycles. Full scale deflection obtained with 20 per cent power factor.

FORM 3. This instrument will maintain its guaranteed accuracy when used on direct current or alternating current within the following frequencies: ranges between 50 and 100 volts—15 to 600 cycles; above 100 volts, 15 to 1200 cycles. Full scale deflection obtained with normal potential and current values at unity power factor.

Forms 1 and 3 Wattmeters have field coils designed to stand approximately double normal current continuously, and the potential circuits about  $1\frac{1}{2}$  times their normal voltage. They have double current ranges equipped with range-changing links and triple voltage ranges having independent binding posts. Form 2 Wattmeters have two potential ranges. All wattmeters have a locking contact key and a reversing switch for measuring three-phase power by the two wattmeter method.

Accurate within  $\frac{1}{4}$  of 1 per cent. Scale length, 5.25 in.

Approximate weight, 12 pounds.

## Form 2—For Low Power Factor Use

Max. Volts	MAXIMUM AMPERES		WATT RANGES		Watt Range Calibrated	Scale Div.	Each
	Fields in Series	Fields in Multiple	Fields in Series	Fields in Multiple			
75/150	*.5	1	7.5/15	15/30	15	150	\$182.00
	1	2	15/30	30/60	15	150	182.00
	2.5	5	37.5/75	75/150	75	150	182.00
	5	10	75/150	150/300	150	150	182.00

\*This range is not compensated and is useful for special conditions only. The power required to operate this instrument will often be as much, and in some cases more, than the power to be measured. Therefore, all possible information should be given in correspondence previous to placing order.

Leather Case for Model 310.....each \$22.00

## Model 779 Weston Super-Sensitive Analyzer

## Type 1

1000 or 20,000 Ohms Per Volt

Used for measurement of tube circuits, potentials and current, power level in decibels, plate voltage and current on amateur transmitters, diode currents in AVC circuits and AFC current, leakage of condensers, and resistance of all types of circuits.

Has heavy molded Bakelite panel, rugged solid oak case, removable cover, convenient carrying handle, and 26 ranges, and precision resistors throughout.

Voltage range; 5, d.c. at a sensitivity of either 1000 or 20,000 ohms per volt. Alternating current temperature compensated.

Alternating current accuracy within 3 per cent.

Direct current accuracy within 2 per cent up to 1000 volts; 3 per cent on 1000 volt range.

Dimensions: width 6 $\frac{3}{8}$  inches; height, 9 $\frac{1}{8}$  inches; depth 4 $\frac{7}{8}$  inches.

Approximate weight, 6 pounds.

VOLTS		Ranges		
A.C.	D.C.	Direct Current Only	Decibels	Ohms

1000	1000	250 Milliampere		
		1 Ampere		
		10 Amperes	+38 to +54	.....

Model 779.....each \$85.00

## No. 41-011 Ideal Portable Insulation Resistance Testers

For checking a.c. or d.c. electrical equipment. Provides a quick, reliable method of checking insulation resistance in all types of electrical circuits and equipment.

Range, 0 to 100 Megohms.

Entirely self-contained.

Power is provided by a small, internal hand generator, which is operated by slowly turning a crank.

Correct testing voltage is indicated by two small button

lights that glow at 500 d.c. range, 0 to 100 Megohms.

Furnished with 1 pair of 10 foot leads and carrying case.

No. 41-011.....each \$164.71

## Weston Switchboard Instruments

For Power Distribution Panels  
7-Inch Round Pattern

Regularly supplied surface type; back connected; pressed steel cases; dull black finish.

Accurate within 1 per cent. Scale, 5.1 inches (130 mm.).

Diameter at base, 7 $\frac{3}{4}$  inches.

Flush type available at \$3.50 extra.

## Model 252, D.C. Voltmeters

Permanent magnet moving coil type. Sensitivity, approximately 100 ohms per volt. Self-contained up to 300 volts. Voltmeters can be provided with a second but lower range at \$7.50 extra.

Resistance thermometers for use with external exploring coils can be supplied in Model 252.

Range	Each	Scale Div.	Range	Each	Scale Div.
150	\$40.00	30	300	\$44.00	30

## Model 252, D.C. Ammeters

Permanent magnet moving coil type. All ranges are provided with external 50 millivolt shunts and 8-foot leads.

Range	Each	Scale Div.	Range	Each	Scale Div.	Range	Each	Scale Div.
10	\$45.50	50	75	\$45.50	30	300	\$46.00	30
15	45.50	30	100	45.50	50	400	47.50	40
25	45.50	50	150	45.50	30	500	49.00	50
50	45.50	50	200	45.50	40	1000	60.00	50

## Model 260, A.C. Voltmeters

Movable iron type. Power consumption, 150-volt range at 115 volts, 6.8 watts. At 25 or 60 cycles, 6.8 volt-amperes.

For use on frequencies from 25 to 133 cycles. For 500 cycle service, add \$8.00 to prices below. Self-contained up to 300 volts.

Range	Each	Scale Div.	Range	Each	Scale Div.	Range	Each	Scale Div.
150	\$37.50	30	300	\$39.00	30	600	\$49.00	60

## Model 260, A.C. Ammeters

Movable iron type. Power consumption, 5-ampere range at 5 amperes, 1.1 watts. At 25 cycles, 1.1 volt-amperes and at 60 cycles, 1.4 volt-amperes.

For use on frequencies from 25 to 500 cycles. Furnished with ranges from 1 to 10 amperes and scaled to correspond at \$35.00. May also be furnished in any of these ranges, but scaled for use with current transformers, at the same price. When so ordered, specify scale desired and transformer ratio.

Thermo ammeters are available in Model 400; prices on application.

Range	Each	Scale Div.	Range	Each	Scale Div.	Range	Each	Scale Div.
5	\$35.00	50	5	\$35.00	200	5	\$35.00	600
5	35.00	75	5	35.00	300	5	35.00	800
5	35.00	100	5	35.00	400			
5	35.00	150	5	35.00	500			

## Wattmeters, Power Factor Meters, Frequency Meters, and Synchroscopes

These instruments, representing a complete line for the conventional switchboard, are available in designs matching the voltmeters and ammeters listed above.

Prices and complete bulletins furnished on application.

## Weston Switchboard Instruments

For Power Distribution Panels  
6-Inch Rectangular Pattern

Regularly supplied surface type; back connected; pressed steel case; dull black finish.

Accurate within 1 per cent. Scale 5.12 inches (130 mm.). Size at base, 5 $\frac{3}{4}$  x 6 inches.

Flush or semi-flush type available at \$3.50 extra.

## Model 502, D.C. Voltmeters

Permanent magnet moving coil type. Sensitivity, approximately 100 ohms per volt. All ranges listed are self-contained. Can be provided with a second but lower range at \$5.50 extra.

Resistance thermometers for use with external exploring coils can be supplied in Model 502.

Range.....	15	150	300
Each.....	\$40.00	41.00	44.00
Scale Division.....	30	30	30

## Model 502, D.C. Ammeters

Permanent magnet moving coil type. All ranges are provided with external 50 mv. shunts and 8-foot leads.

Range	Each	Scale Div.	Range	Each	Scale Div.	Range	Each	Scale Div.
10	\$45.50	50	200	\$45.50	40	1200	\$63.50	60
15	45.50	30	300	46.00	30	1500	69.50	30
25	45.50	50	400	47.50	40	2000	73.50	40
50	45.50	50	500	49.00	50	2500	82.50	50

## Model 496, A.C. Voltmeters

Movable iron type. Power consumption, 150-volt range at 115 volts, 6.8 watts. At 25 or 60 cycles, 6.8 volt-amperes.

For use on frequencies from 25 to 125 cycles. Available for use on higher frequencies. External resistors are required for ranges. Between 301 and 750 volts, a Type 3 No. 2 box is used. Above 750 volts, a potential transformer is recommended.

Range	Each	Scale Div.	Range	Each	Scale Div.	Range	Each	Scale Div.
150	\$37.50	30	300	\$39.00	30	600	\$49.00	60
250	38.50	25	500	46.00	50	...	.....	..

## Model 496, A.C. Ammeters

Movable iron type. Power consumption, 5-ampere range at 5 amperes, 1.1 watts. At 25 cycles, 1.1 volt-amperes, and at 60 cycles, 1.4 volt-amperes.

For use on frequencies from 25 to 500 cycles. Furnished with ranges from 1 to 10 amperes, and scaled to correspond at \$35.00. May also be furnished in any of these ranges, but scaled for use with current transformers, at the same price. When so ordered, specify scale desired and transformer ratio.

5	35.00	150	30	5	35.00		600	60	.	.....		.....	.....	..

## Wattmeters, Power Factor Meters, Frequency Meters, and Synchroscopes

These instruments, representing a complete line for the conventional switchboard, are available in designs matching the voltmeters and ammeters listed above.

Prices and complete bulletins furnished on application.

## Weston Switchboard Instruments

Models 267, 269, 271, and 273 Ammeters,  
Milliammeters and Voltmeters

Fan-Shaped—For Power Distribution Panels—D.C.

Permanent magnet moving coil type; magnetically shielded.

In surface type pressed steel cases with back connections, dull black finish, at prices shown. Model 269, with bakelite case at a surcharge of \$5.25 above regular price. When a bakelite case is used, instrument is not shielded.

## Dimensions and Weights

300	60	60	*42.00	39.00	53.25	61.50

Approximate resistance in ohms per volt: Model 267 100; Model 269 100; Model 271 100; Model 273 100.

\*Furnished with external resistor.

Millivoltmeters are also available in the fan-shaped instruments. Prices upon application.

## Weston Panel Instruments

### Model 640 Group (Models 643, 642, 641 and 640) For General Small Panel Requirements

Models 643, 642 and 640 are supplied in flush or surface cases of metal or bakelite. Model 641 Wattmeter is supplied in flush metal or semi-flush metal cases only. When ordering, specify style and whether metal or bakelite case is desired.

D.c. instruments for use on circuits above 750 volts should be specified with bakelite cases when not possible to connect in grounded side of line.

Dimensions: Metal case,  $4\frac{3}{8}$  inches diameter; bakelite case,  $4\frac{1}{16}$  inches diameter.

Approximate weights: Models 640, 642 and 643,  $1\frac{1}{4}$  pounds; Model 641,  $1\frac{1}{2}$  pounds.

#### Model 643 D.C. Voltmeters

Permanent magnet moving coil type. Sensitivity approximately 100 ohms per volt. All ranges listed are self-contained.

Accurate within 1 per cent. Scale length, 3.34 inches.

Range Volts	Each	Scale Div.	Range Volts	Each	Scale Div.
10	\$19.00	50	80	\$19.00	40
15	19.00	75	100	19.50	50
25	19.00	50	150	20.00	75
50	19.00	50	300	21.50	60

#### Model 643 D.C. Millivoltmeters

Permanent magnet moving coil type. Accurate within 1 per cent. Scale length, 3.34 inches.

Range Milli-volts	Each	Scale Div.	Approx. Resistance Ohms
50	\$19.00	50	2
100	19.00	50	4

#### Model 643 D.C. Ammeters

Permanent magnet moving coil type. Regularly supplied with self-contained shunts up to and including 50 amperes, but can be supplied on special order with external 50 mv. shunts and 8-foot leads. When external shunt instruments are desired, add price of shunt to the instrument price of \$20.

Range Amp.	Each	Scale Div.	Range Amp.	Each	Scale Div.
1	\$19.00	50	25	\$19.00	50
2	19.00	40	30	19.00	60
3	19.00	60	50	19.00	50
5	19.00	50	75	24.50	75
10	19.00	50	100	24.50	50
15	19.00	75	150	24.50	75

#### Model 643 D.C. Milliammeters

Permanent magnet moving coil type. Ranges above 30 milliamperes are shunted and have a drop of approximately 100 millivolts.

Accurate within 1 per cent. Scale length, 3.34 inches.

#### Model 643 D.C. Milliammeters

Range Milli-amp.	Each	Scale Div.	Approx. Resist. Ohms
1	\$19.00	50	48
3	19.00	60	9.9
5	19.00	50	4.6
10	19.00	50	2.8
50	19.00	50	2
100	19.00	50	1
150	19.00	75	0.67
200	19.00	40	0.5
250	19.00	50	0.4

#### Model 643 D.C. Microammeters

Permanent magnet moving coil type. Low resistance microammeters in ranges of 200, 300 and 500 microamperes are listed for special applications. The high resistance instruments are recommended for general use.

Accurate within 1 per cent. Scale length, 3.34 inches.

Range Micro-amp.	Each	Scale Div.	Approx. Resist. Ohms
30	\$29.00	60	2000
50	28.25	50	1200
100	27.50	50	385
200	21.50	40	600
*200	23.00	40	270
500	21.50	50	218
*500	23.00	50	60

\*These instruments are used for applications where low resistance is the first consideration, even at the expense of other performance characteristics.

#### Model 642 A.C. Voltmeters

Movable iron type for use on frequencies from 25 to 133 cycles. For 500 cycle service, add \$6.50 to the prices shown.

Model 642 Instruments for use on circuits above 300 volts should be specified with bakelite cases when not possible to connect in grounded side of line.

Power consumption: 150-volt range at 115 volts, 1.42 watts. At 25 or 60 cycles, 1.42 volt-amperes.

Accurate within 1 per cent. Scale length, 2.8 inches.

Range Volts	Each	Scale Div.	Resist. Ohms
20	\$19.00	40	192
30	19.00	30	360
50	19.00	50	1,000
130	19.75	65	8,100
150	20.00	30	9,400
†250	25.00	25	16,000
†300	25.50	30	19,000
†500	28.50	50	30,600
†600	29.50	60	37,000

†With Type 5 No. 1 External Resistor.

†With Type 5 No. 2 External Resistor.

#### Model 642 A.C. Ammeters

Movable iron type for use on frequencies from 25 to 500 cycles. Normally supplied self-contained up to and including 50 amperes. No extra charge when scaled for use with current transformers. When so ordered, specify scale desired and transformer ratio.

Power consumption: 5-ampere range at 5 amperes, 1.1 watts. At 60 cycles, 1.1 volt amperes.

Accurate within 1 per cent. Scale length, 2.8 inches.

#### Model 642 A.C. Ammeters

Range Amp.	Each	Scale Div.	Range Amp.	Each	Scale Div.
1	\$19.00	50	10	\$19.00	50
2	19.00	40	15	19.00	30
3	19.00	30	25	19.00	25
5	19.00	50	30	19.00	30
7.5	19.00	75	50	19.00	50

#### Model 641 D.C. and Single Phase A.C. Wattmeters

Electrodynamometer type for use on direct current or alternating current at frequencies from 25 to 125 cycles. Instruments are available for 500-cycle service on special order. Model 641 Wattmeters are furnished in flush or semi-flush type, black metal cases only.

Wattmeters may be used with a Y-box on balanced 3-phase, 3-wire circuits. Reactive component on balanced polyphase circuits can also be measured. When ordering, give complete circuit information.

Instruments listed have self-contained current and potential ranges. Higher current ranges require the use of a current transformer. A Type 5 No. 2 resistance box is required for ranges between 251 and 600 volts. Between 601 and 750 volts, a Type 5 No. 3 box is used. Instruments for use on potentials above 750 volts require both current and potential transformers.

Power consumption: potential circuit at 115 volts, 1.96 watts; at 60 cycles, 1.96 volt-amperes. Current circuit at 5 amperes, 0.65 watt; at 60 cycles, 0.68 volt-ampere.

Accurate within 1 per cent. Scale length, 2.8 inches.

Volts	Each	AMPERES Norm. Max.	Scale Watts	Scale Div.
100-150	\$65.00	1 1.5	100	50
100-150	65.00	2 3	200	40

200-250	68.00	10 15	3 Kw.	30
200-250	68.00	20 30	4 Kw.	40

#### Model 640 Thermo-Ammeters

Thermocouple type. Ranges listed are self-contained. Similar or higher ranges can be obtained with external heating elements; prices on request. When external elements are ordered specify length of leads desired.

Power consumption; 1 to 4 amperes inclusive varies from 0.2 to 0.4 watt per ampere approximately; 5 amperes and above 0.2 per ampere.

Accurate within 1 per cent. Scale 3.34 inches.

Write for information on the use of these instruments at frequencies in excess of those indicated. When circuit conditions do not permit connecting the instrument in the grounded side of the line, bakelite cases should be specified.

Range Amp.	Each	Scale Div.	Frequency at Which the Frequency Error Does Not Exceed 2% Kilocycles
1	\$25.00	50	30,000

500 Microamperes, 50 Scale Divisions.....each \$17.00

Bakelite cases should be specified for ammeters and milliammeters when used on circuits above 300 volts when it is not possible to connect instrument in grounded side of line. Bakelite case supplied at no additional cost.

## Weston Panel Rectangulars

Models 801 and 861

Model 801

Normally calibrated for use on non-magnetic panels.

Model 801 is supplied in semi-flush, black bakelite case. Features exceptional scale length, readability, and pleasing design. Mounted the same as round panel instruments; it being necessary to drill one round opening for body of instrument, plus four small holes for mounting bolts. Dimensions: height,  $4\frac{1}{4}$  inches; width,  $4\frac{1}{4}$  inches; depth,  $2\frac{1}{4}$  inches; diameter of panel hole,  $3\frac{1}{4}$  inches. Weight, 1 pound.

Model 861 is similar in size to Model 801, except that it projects  $\frac{1}{4}$ -inch more from the panel. It is equipped with a pair of self-contained, miniature base, 6-volt lamps for scale illumination. Lamps are replaceable by removing the instrument front. Dimensions: height,  $4\frac{1}{4}$  inches; width,  $4\frac{1}{4}$  inches; depth,  $2\frac{1}{2}$  inches; diameter of panel hole,  $3\frac{1}{4}$  inches. Weight, 1 pound.

To be used on steel panels, panel thickness must be specified when ordering.

## Models 801 and 861

Permanent magnetic moving coil type.

Accuracy, 2 per cent. Scale, 3.17 inches (80.3 mm.).

## Direct Current Voltmeters

Sensitivity approximately 200 ohms per volt up to and including 200 volts. Higher ranges, 1000 ohms per volt.

Range Amp.	Scale Div.	Model 801 Each	Model 861 Each	Range Amp.	Scale Div.	Model 801 Each	Model 861 Each
1	50	\$14.50	\$19.50	80	40	\$14.50	\$19.50
2	40	14.50	19.50	100	50	15.00	20.00
3	60	14.50	19.50	130	65	15.25	20.25

7.5	75	14.50	19.50	200	40	16.00	21.00
10	50	14.50	19.50	250	50	16.65	21.50
15	75	14.50	19.50	300	60	17.00	22.00
25	50	14.50	19.50	500	50	19.00	24.00
50	50	14.50	19.50	...	...	.....	.....

All ranges listed are self-contained.

## Direct Current Ammeters

Regularly supplied with self-contained shunts up to and including 50 amperes, but can be supplied with external 50 millivolt shunt and 8-foot leads. When external shunt instruments are desired, add price of shunt to the instrument price.

Range Amp.	Scale Div.	Model 801 Each	Model 861 Each	Range Amp.	Scale Div.	Model 801 Each	Model 861 Each
1	50	\$14.50	\$19.50	5	50	\$14.50	\$19.50
1.5	75	14.50	19.50	10	50	14.50	19.50
2	40	14.50	19.50	25	50	14.50	19.50
3	60	14.50	19.50	50	50	14.50	19.50

## Direct Current Milliammeters

Range Amp.	Scale Div.	Approx. Resistance	Model 801 Each	Model 861 Each	Range Amp.	Scale Div.	Approx. Resistance	Model 801 Each	Model 861 Each
1	50	80	\$14.50	\$19.50	50	50	....	\$14.50	\$19.50
3	60	7.3	14.50	19.50	100	50	....	14.50	19.50
5	50	2.4	14.50	19.50	200	40	....	14.50	19.50

100	50	1110	23.00	28.00	...	...	...	.....	.....

Low resistance instruments, in ranges above 75 microamperes, are available for special requirements.

## Weston Panel Rectangulars

Models 802, 803, 862, and 863

Models 862 and 863  
Illuminated

Normally calibrated for use on non-magnetic panels.

Models 802 and 803 are supplied in semi-flush, black Bakelite cases. Mounted by drilling one round opening for body of instrument, plus four small holes for mounting bolts. Dimensions:  $4\frac{1}{4} \times 4\frac{1}{4} \times 2\frac{1}{4}$  inches; diameter of panel hole,  $3\frac{1}{4}$  inches. Weight 1 pound.

Models 862 and 863 are similar in size to Models 802 and 803 except that they are equipped with a pair of self-contained, miniature base 6-volt lamps for scale illumination. Dimensions:  $4\frac{1}{4} \times 4\frac{1}{4} \times 2\frac{1}{2}$  inches; diameter of panel hole,  $3\frac{1}{4}$  inches. Weight, 1 pound.

## Models 802 and 862

Permanent magnetic moving coil type.

Accuracy, 2 per cent, scale, 3.17 inches (80.3 mm.).

Rectifier type, alternating current instruments provide a practical means of measuring minute alternating currents.

May be relied upon to within about 5 per cent of full scale value on wave forms closely approximating the sine wave at ordinary room temperatures.

## Alternating Current Rectifier Type Voltmeters

Range Amp.	Scale Div.	Model 802		Model 862	
		1000 Ohms per Volt	2000 Ohms per Volt	1000 Ohms per Volt	2000 Ohms per Volt

4	40	19.00	24.00	20	40	19.00	24.00

## Minerallac Statiscopes

### A Safety Device for the Protection of the Electrical Worker

A glow-tube form of electroscope, encased in hard rubber, that will indicate the presence of potential when held in the changing static field such as is found surrounding: alternating current circuits, pulsating direct current, X-Ray equipment, static from belting, high frequency, condenser discharges, automobile ignition, etc.

#### Pocket Type

The pocket type is intended for all around testing where a sensitive instrument is desired and is specially adapted for use on underground cable work. It is designed to give positive indication on 2000 volts and up in contact with the outside of conductor insulation and at a point several times the flashover distance on non-insulated conductors.

It is understood that materials which destroy or absorb the static field such as the lead on underground cables, metal switch cabinets, grounded framework, etc. should not be between any of the instruments and the conductor being tested.

With this instrument, it is not necessary to touch the conductor carrying high potential.

Each..... \$4.50

#### Overhead Type

#### Overhead Type, Extended

The overhead type is a less sensitive instrument, which makes it specially adaptable for overhead lines. It is furnished with a telescopic cover which makes it suitable for direct contact up to and including 2300 volts, when held in the operator's hands.

The red fiber ring is placed on the cover to indicate the handle portion of the instrument.

When closed, this statiscopes is 7 1/8 inches long and 3/4 inch in diameter; when extended, it is 12 inches long.

Each..... \$8.00

## Brach Safe-T-Glow High Tension Detectors

Safe-T-Glow consists of a sensitive Neon tube mounted on cushion supports, the light of this tube being amplified by a mirror reflector. It is sensitive to the presence of high tension current and will start to glow at 2000 volts when exposed terminal is held in contact with high tension wire. With increased voltage the tube will glow at varying distances away from the wire, depending on the voltage.

Model A, with 3-Foot Handle, for Circuits 2000 to 35000 Volts.....each .....

Model B, Same as Model A except with 9-Foot Handle, for Circuits from 45000 to 220000 Volts.....each .....

## Test-O-Lites

The Test-O-Lite contains two electrodes in a neon gas filled bulb, each of which is connected in series with a suitable protecting resistor.

It will indicate voltage—a dim glow is shown when testing 110 volts, and on higher voltages up to 550 volts the glow is brighter in proportion.

Indicates whether a.c. or d.c. If a.c. both electrodes will glow, and if d.c. only one will glow and at the same time indicate the negative pole of the circuit.

Detects the live and ground wires. One can test whether a conductor has tension against ground or not by touching one of the leads with the hand.

Tests resistance leaks. Can be used as a pilot light if connected permanently to any circuit.

Furnished in a bakelite casing. Is no bigger than a fountain pen.

Each..... \$9.95

## Brach Fixed Neon High Voltage Indicators

TYPE "R"

TYPE "RC"

TYPE "RS"

Consists of a sensitive Neon tube enclosed in a glass protecting case with metal ferrules on each end connected to electrodes of the tube.

Designed for permanent installation. With sufficiently high voltage indicator will give an indication if only one end is attached to line.

Greater brilliance is obtained if a plate or other metal is attached to free end giving greater capacity to electrodes.

Wherever practical the indicator may be placed directly across a high voltage line, provided sufficient resistance is placed in series with tube to limit current to only a few milliamps. Another type of indicator has been developed recently for use across a line (or from line to ground) with a suitable resistance in series.

Also furnished when specified, at \$1.00 extra, with metal strap arranged to act as condenser plate and support one end of tube.

**Type R.**—Neon tube is a straight tube with electrodes about 3/4-inch apart. Will give an indication on 500 volts.

**Type R.**.....each \$3.30

**Type RC.**—Neon tube is straight but has a constriction between electrodes. Will give an indication on 500 volts.

**Type RC.**.....each \$3.72

**Type RS.**—Neon tube is of small bore tubing wound into a spiral. This type gives more illumination than Types R and RC when voltage is sufficiently high to operate same. Requires about 3000 volts for an indication.

**Type RS.**.....each \$4.86

## No. 5000 Square D Voltage Testers

This voltage tester operates on a.c. or d.c., indicating the voltage of either.

It is used for 110 to 600 volts.

Tester does not require lamps; easily carried in pocket.

Sharp points on end of long rubber covered leads permits piercing insulation without damaging it.

Insulation is armored at entrance to case to prevent breakage.

No. 5000 Voltage Tester.....each \$18.00  
No. 5002 Voltage Tester Case.....each 2.00

## G-E Type AIRS Induction Voltage Regulators

For Indoor Service

Single Phase, 60 Cycles, Air-Cooled

Large Automatic

Small Hand Operated

Small Motor Operated

This is an indoor-type, natural-draft, air-cooled induction voltage regulator for secondary circuit regulation and for testing and industrial service.

Automatic regulators can be used where lighting and power are both supplied from the same source; the regulator will maintain illumination at correct levels by compensating for voltage drop caused by changes in lighting loads, or changes in load on the power feeders.

Hand operated or manually controlled motor operated regulators can be used wherever a convenient source of variable voltage is required for various industrial processes.

For complete information, ask for Bulletin GEA-3057.

†These regulators have 2 series windings, each of which will carry 50% of the rated kva.

‡Require an extra potential transformer for the contact-making volt-meter. For 480-volt regulators, standard potential transformer No. 86X773 can be supplied at \$34. each. For 600-volt regulators, standard potential transformer No. 86X774 can be supplied at \$35. each.

### G-E Inductrols

#### Small Dry-Type, Induction Voltage Regulators for Indoor Service

Single Phase, 60 Cycles, Air-Cooled

Automatically Operated Inductrol

Hand Operated Inductrol

These inductrols are for use in industrial and electronic applications. Automatically operated where voltage or current is to be maintained within narrow limits; hand operated where a source of smoothly variable voltage or current is required.

Because of their excellent appearance, great mechanical strength, light weight, and small size, these sturdy inductrols are well suited for use in factories, laboratories, and schools, as well as for hundreds of built-in applications and others which include motor speed control, heat control, illumination control, dielectric testing, rectifier control, calibrating instruments, and compensating voltages.

For complete information, ask for Bulletin GEA-4508.

### G-E Dry-Type Transformers

Type M—For Indoor and Outdoor Service

Type D—For Indoor Service Only

Type M

Type D

G-E dry-type transformers have a wide range of applications on circuits 600 volts and below. Such applications include supplying the proper voltage for special lamps, tools, bells, buzzers, airport lights, brazing, welding, testing and industrial heating equipment. They are also used for insulating circuits to promote safety, operating lights and portable tools from power circuits, boosting voltage, phase changing and many other applications.

In transformers rated 10 kva. and below, as well as auto-transformers of equivalent physical size, the Type M construction is used. It forms a solid, compact unit which dissipates heat from its external surfaces by radiation. In the larger sizes, the Type D, natural-draft construction is used. The transformer is effectively cooled by air currents which enter ventilating louvers in the housing and circulate around the core and coils.

These transformers are built in standard ratings up to 100 kva. and 600 volts, 60 cycles. Special transformers, up to 200 kva. for 60-cycle circuits, are built from an extensive line of standardized parts, economically and for quick delivery. They are applicable to circuits of 600 volts and below.

**Type M** transformers include a built-in junction box designed for conduit connection or for open wiring. For conduit connection, knockouts are provided in the sides, end, and back of the compartment. For open wiring, a fiber bushing is used in place of the bottom cover of the compartment.

**Type D** transformers have leads brought out for open wiring, through bushed holes in the side plates. For enclosed wiring, conduits can be run directly into these side plates, or when desired, 90-degree conduit outlets may be used.

Type D transformers are normally arranged for floor mounting, but when desired they can be wall mounted by the use of angle iron brackets.

Send for Bulletin GEA-897 for complete description.

G-E also has available a complete line of dry-type distribution transformers for primary circuits of 2400 to 13,200 volts, in sizes 1.5 to 500 kva. inclusive.

Send for Bulletin GEA-3714 for complete information.

## G-E Type M Sign-Lighting Transformers

For 11½ or 23-Volt Applications  
For Indoor or Outdoor Service

Single Phase, 60 Cycles, Air-Cooled  
Primary 110/220—115/230—120/240 Volts  
Secondary 11/22—11½/23—12/24 Volts

Designed primarily for sign lighting. As these transformers are compact, light in weight, and weatherproof, they can be mounted in any convenient location, such as the back of the sign.

These transformers have a wide range of application, because both the primary and secondary windings are arranged for series-multiple connections. They may be connected as a transformer with the secondary supplying 11½ or 23 volts, 2-wire, or 23/11½ volts, 3-wire; also as an autotransformer to deliver 126½ or 138 volts from a 115-volt supply, or 241½ or 253 volts from a 230-volt supply. Two or more units may be used in various combinations to obtain many other special voltages.

One of the many special applications is pipe thawing. Two transformers are used, the primaries being connected in multiple and the secondaries in series to give 46 volts. This gives sufficient capacity for thawing pipes up to 2-inch diameter. The current can be controlled to some extent by looping the secondary cables.

## G-E Type M Service Transformers

To Supply or Insulate 115 or 230-Volt Circuits

Single Phase, 60 Cycles, Air-Cooled

For Indoor or Outdoor Service

For Oil Well, Mine and Pump-House Service

These transformers are designed especially to be used at the end of long lines such as are generally used to supply oil well, mine and pump-house service. Because of the wide voltage variation likely to be encountered at such locations, these transformers are designed to operate satisfactorily from 440 to 525 volts and may be used on either a 50 or 60-cycle circuit. The secondary voltages will vary accordingly. They are arranged to be connected directly into a conduit system and are supplied with ¾-inch pipe nipples and 12-inch leads as shown in illustration.

Primary 440—525 Volts  
Secondary 110—131 Volts

No.	Each	KVA. Output Cont. 55°C. Rise	Depth In.	Wall Space Inches	Approx. Ship. Wt. Lb.
61G189	\$27.00	.100	4⅜	4⅞x7⅞	14
61G190	30.00	.250	4⅜	4⅞x8⅞	19
61G191	41.00	.500	4⅜	4⅞x10	29

Suitable also for 50-cycle operation.

## G-E Service Transformers

To Supply or Insulate 115 or 230-Volt Circuits

Single Phase, 60 Cycles, Air-Cooled

Type M—For Indoor or Outdoor Service  
For General Light and Power Service

These transformers are designed to reduce the voltage of 230, 460, or 575-volt power circuits to either 115 or 230 volts for supplying lights and other equipment. Some of the ratings are also suitable for insulating one circuit from another without change in voltage. In addition to the many single-phase applications, they can be used in banks on polyphase circuits.

The classification "service" is applied to transformers used to supply a standard utilization voltage from another standard utilization voltage.

**G-E Type M Service Autotransformers**

To Supply 115 and 230-Volt Circuits  
For Indoor or Outdoor Service  
For General Light and Power Service

Single Phase, 60 Cycles, Dry Type  
Primary 220—230—240 Volts  
Secondary 110—115—120—2-Wire or 220/110—233/115—  
240/120 Volts—3-Wire

Autotransformers are more economical and smaller than a transformer designed to carry the same load. Within their voltage limitations, they will perform the same function as service transformers with the exception of insulating two circuits. They may be used to obtain 115 volts from a 230-volt circuit, to derive a neutral on a 230-volt, 2-wire circuit, or to balance a 115/230-volt, 3-wire circuit. They also may be used in banks on polyphase circuits.

In ordering autotransformers, care should be exercised so that the installation will meet local electrical inspectors' requirements.

Cat. No.	Each	Kva. Output Cont. 55°C. Rise	Depth In.	Wall Space Inches	Approx. Ship. Wt. Lb.

77G592	282.00	25	9 $\frac{7}{8}$	11 $\frac{3}{8}$ x 27 $\frac{1}{2}$	390

**G-E Type M Dry-Type Transformers**

For 32-Volt Applications  
For Indoor or Outdoor Service

Single Phase, 60 Cycles  
Primary 110/220—115/230—120/240 Volts  
Secondary 30.6—32—33.4 Volts

These transformers derive 32-volt circuits from 115 or 230-volt lighting or power circuits; 32-volt portable lamps and portable tools are frequently used in mines, steel plants, meat packing plants, and in damp locations to prevent injury in case of accidental grounding of the circuit through the operator's body. The 32-volt lamps are often more economical and have longer life than those rated at higher voltages.

These transformers can also be used as autotransformers to boost the voltage of circuits. When so connected, the kva. output of each transformer will equal the kva. output

listed below, multiplied by  $\left(\frac{H.V.}{H.V.-L.V.}\right)$  and the kva. output of a 3-phase bank will be three times that of each unit.

Cat. No.	Each	Kva. Output Cont. 55°C. Rise	Depth In.	Wall Space Inches	Approx. Ship. Wt. Lb.
61G59	\$24.00	.250	4 $\frac{9}{16}$	4 $\frac{7}{8}$ x 8 $\frac{1}{2}$	17

61G66	151.00	5	7 $\frac{3}{4}$	8 $\frac{3}{4}$ x 21 $\frac{1}{2}$	158

**G-E Transformers and Auto Transformers for Phase Changing**

Dry Type, 3 to 2, or 2 to 3-Phase, 60 Cycles

Type M—For Indoor or Outdoor Service

Type D—For Indoor Service Only

Phase-changing transformers and autotransformers are primarily of use when a phase change is made on a distribution system. They permit the economical use of motors and other polyphase equipment which would otherwise become obsolete.

The two lines of autotransformers are not interchangeable and it is necessary to determine whether the 2-phase circuit is 3-wire or 4-wire in order to select the proper unit. These autotransformers cannot be used on a 4-wire circuit having the mid-points of the two phases connected. For this application, the 2-winding transformer is recommended, although especially designed autotransformers can be furnished.

**Types M and D Transformers**

3-Phase—220-230-240 Volts

2-Phase—220-230-240 Volts

**Type M Transformers, 3 to 2-Phase, 3 or 4 Wire**

No.	Each	KVA. Output Cont. 55°C. Rise	Depth In.	Wall Space Inches	Approx. Ship. Wt. Lb.
61G77	\$76.00	1	4 $\frac{9}{16}$	4 $\frac{7}{8}$ x 18 $\frac{7}{8}$	57
61G78	141.00	3	6 $\frac{1}{8}$	6 $\frac{7}{8}$ x 24 $\frac{1}{2}$	115
